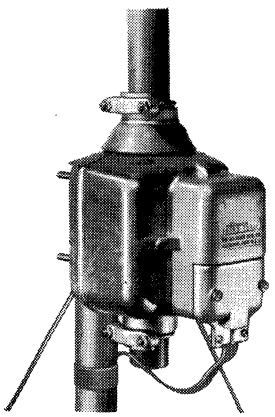
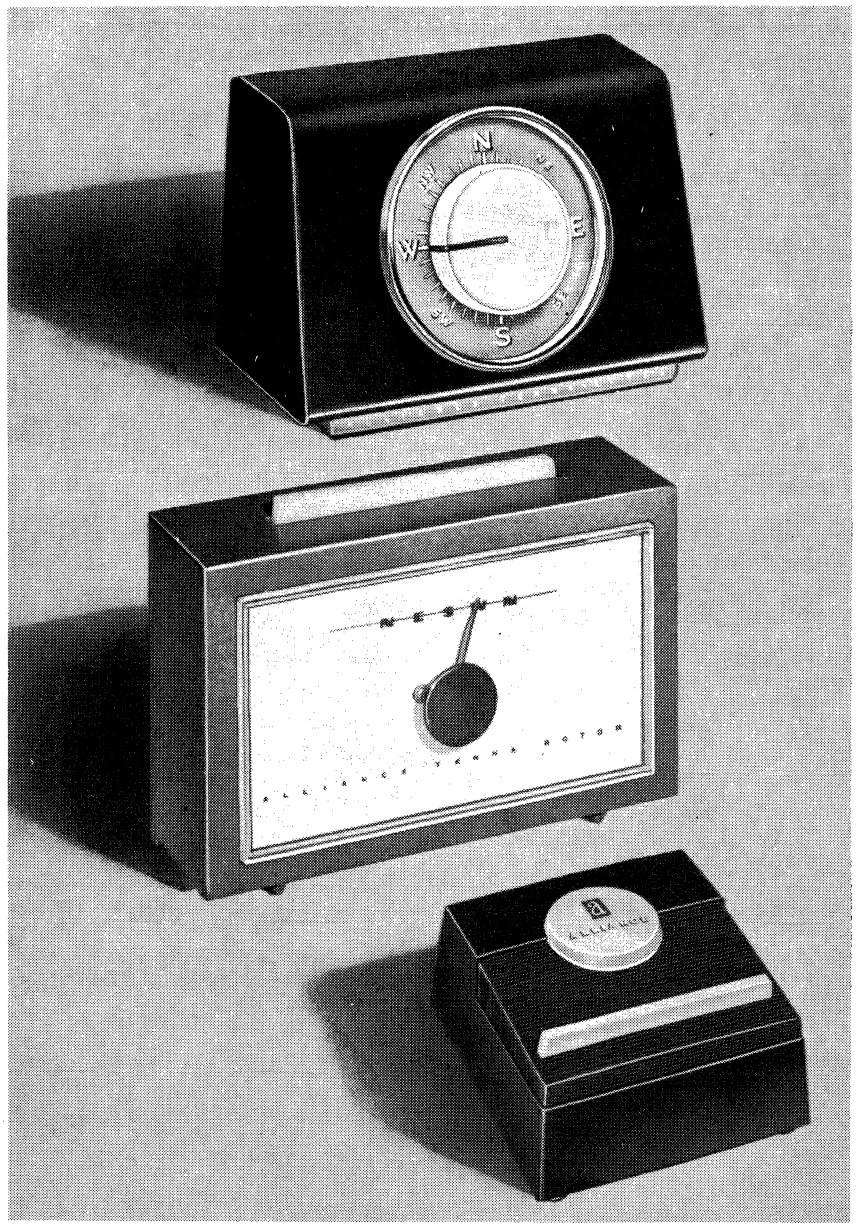
Choose from Alliance

for the world's most popular TV antenna rotator

ALLIANCE TENNA-ROTOR

Designed to rotate all conventional type TV antennas, the Alliance Tenna-Rotor consists of a fully enclosed, electrically driven one RPM rotator (shown at right) into which the antenna center-post is clamped. Four-conductor "zip" cable connects rotator with plastic control case (three models illustrated below) placed near receiver. A selector switch controls rotation to point antenna in any direction for optimum reception.





Model U-98—Fully Automatic

Simply set the pointer—antenna automatically turns by itself and stops at the direction shown on the indicator dial. New styling plus the exclusive automatic feature makes Model U-98 the ultimate in rotators! Available in Forest Green, Ivory and Mahogany Grain.

Model T-12—with exclusive Tenna-Teller direction indicator

This finger-tip, electrically driven and manually operated model is noted for extreme accuracy, compactness and smart styling. "Tenna-Teller" indicator dial shows the exact compass direction to which the antenna is pointed. Available in Forest Green, Ivory and Mahogany Grain.

Model K-22—finger-tip control bar

When pressed on one end, control bar rotates antenna in one direction, reverses when pressed on other end. Center disc signal light indicates limit of travel is reached. Offers accurate, trouble-free control of antenna at extremely reasonable price. Available in standard color only.

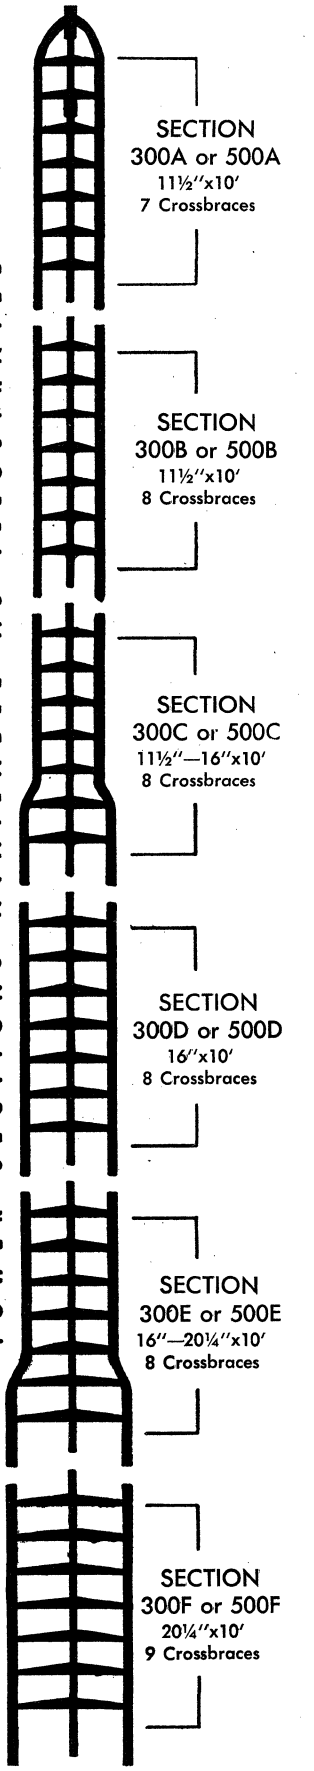
TOWERS

SELF-SUPPORTING UP TO 60 FEET HIGH
ECONOMY OR HEAVY-DUTY MODELS
NO LOST TOWER FOOTAGE
FAST, EASY SECTIONAL ERECTING



With these two Jontz Tower models you can fill any tower needs . . . from small suburban to heavy-duty commercial installations. Sectional construction and special drive-in bases make erection fast and simple. The Economy Model No. 300 will easily withstand high wind loads normally encountered in most parts of the country. Heavy Duty Model No. 500 will withstand hurricane force winds having been **tested** at wind loads of 80 mph.

Both models are self-supporting up to 60 feet high. Model 300 can be extended to 200 ft. by use of guys every 20 feet and Model 500 up to 400 ft. by use of guys every 20 feet. There is no lost tower footage when mounting in either concrete or the special drive-in base. Since the tower is separate from the base, it may be moved to another location without impairing strength.

The towers are fabricated in 10'0" sections and can be erected in one-piece or by sections. Model 300 is fabricated from 1¼" x 18 ga. tubular uprights with ⅛" x 1¼" corrugated cross-braces; Model 500 from 1¼" x 16 ga. tubular uprights with 1¼" x 16 ga. tubular cross-braces. Sections are zinc electroplated and dipped in clear Butyrate lacquer. **(Model 300 also available galvanized.)** These sections are locked together with two self-locking ⅜" bolts in each leg. The splined bolts allow the threaded section to be inserted without damage and prevent the hole from stretching when the tower moves in the wind.

HOW TO ORDER

1. Specify if to be mounted in concrete or drive-in base.
2. Order by specific sections, starting at the base. See illustration for section numbers.
3. If Model 300 is wanted with galvanized finish be sure to specify.

SHIPPING: For best freight rates, 40 ft. and over towers will be shipped in section combinations permitting 2 telescoped bundles, unless otherwise specified. (Example: a 60 ft. tower will consist of sections A, C, D, E and 2 F's.)

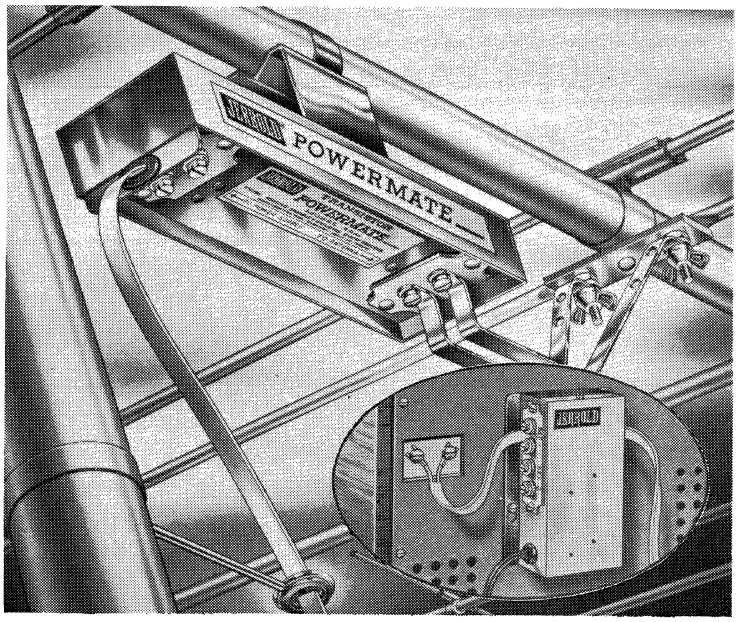
JERROLD®

TV RECEPTION AIDS FOR THE HOME

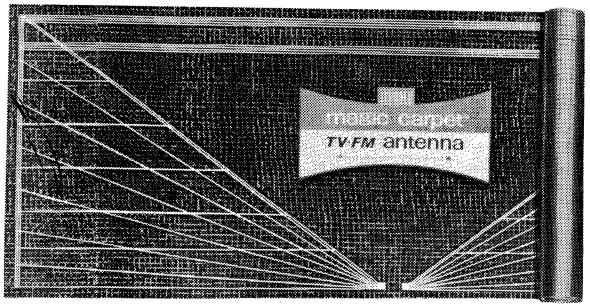
NEW TRANSISTOR PREAMPLIFIER POWERMATE MODEL APM-101



Jerrold's POWERMATE is a transistorized TV-FM preamplifier with exceptional high gain and excellent noise figure, far better than any single-tube or transistor amplifier in its class on the market. Ideal for fringe and weak signal areas, it works with any TV-FM antenna new or already installed, does away with tube replacements, needs no batteries and is fed from a remote power supply consuming only 3 watts (less than an electric clock). Compact, light-weight construction permits mounting directly on antenna boom for maximum transfer of antenna energy. The aluminum case is weatherproof and serves as a shield against spurious signal interference. "No-strip sure-contact" terminals allow quick efficient hookup to antenna and receiver. Model APM-101 has dual outputs to feed two TV and/or FM sets, with Jerrold MF-type multi-couplers will feed up to five sets. Shipping weight 2 lbs. **$26.63 Net**

JERROLD MAGIC CARPET* ANTENNA

THE INDOOR ANTENNA WITH OUTDOOR PERFORMANCE



MODEL MK-1

This new antenna by Jerrold is the first full-scale printed-circuit antenna. Truly a "Magic Carpet" carrying quality TV/FM signals to receivers in the home, the MK-1 is easily installed (lay it on any flat, horizontal surface in the attic, under a rug, or staple to a ceiling) and simple to orientate (shift its position for best reception). Ideal for use with the Jerrold Amplified TV/FM Home System, the Magic Carpet eliminates the unsightliness and maintenance costs of outdoor antennas. When properly installed, the Magic Carpet provides reception comparable to an outdoor, conical-type antenna mounted in the same location. This means that the MK-1 will provide excellent reception of TV stations within a 30-mile radius and of FM stations within a much greater radius. The antenna is shipped complete with 6 plastic strap insulators (Model HS-36) and 25 feet of twin-lead for attachment to a home amplifier or to a TV receiver. Shipping Weight — 1¾ lbs.

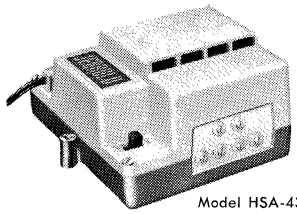
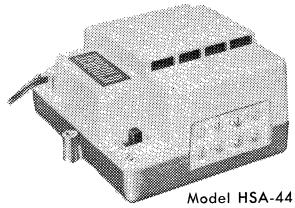
NEW TV/FM AMPLIFIED COUPLERS



Model HSA-43



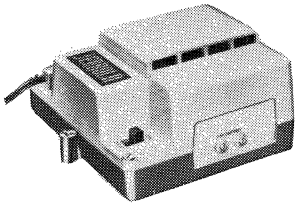
Model HSA-44

Model HSA-43 (For 3 Sets) The new JERROLD amplified 3-set coupler, Model HSA-43, employs a single 6DJ8 tube to provide 5 db minimum gain from two outlets and unity gain from the other. It is ideal for operating 2 TV and 1 FM receivers from a common antenna. The HSA-43 amplified coupler operates on an input as low as 100 microvolts and has an excellent noise figure. The input and output impedance of 300 ohms permit the use of twin-lead in installation. This compact (4½" x 4½" x 3") rugged unit is powered from 117 V 60 cycle ac, consumes only 10 watts and incorporates "no-strip" twin-lead terminals.
Shipping weight — 1¼ lbs. UL Approved. **$17.95 Net**

Model HSA-44 (For 4 Sets) Similar to the HSA-43 but serves up to four TV/FM sets with a minimum of 1½ db gain at each output.
$18.95 Net

Note: Where desired, use Jerrold's no-strip twin-lead outlets to create convenient plug-in locations.

FM RANGE EXTENDER MODEL FMX



Jerrold's latest FM preamplifier Model FMX has been especially designed with a high gain of 20 db minimum over the entire FM band, while eliminating unwanted background noise and drifting. A frame-grid tube (6DJ8), printed circuitry, and built-in power supply provide stable top performance and long life. Model FMX brings in many more FM stations, makes even inexpensive FM tuners and receivers sound like "a million." It is ideally suited for FM Multiplex reception, will increase to 46 miles the ordinary reception range of 23 miles from FM Multiplex transmitters. With Jerrold MF-type multi-couplers this powerful preamp will feed two, three or four FM sets. Housed in an appealing light-alloy case and equippped with "no-strip" twin lead connectors, Model FMX can be quickly installed anywhere in the home between antenna and receiver. "DE-SNOWER" PREAMPLIFIERS

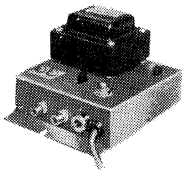
Mast-Mounted "De-Snower" Model DSA-202 with Remote Power Supply

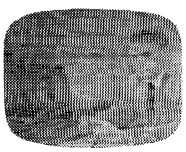


JERROLD "De-Snower" preamplifiers provide the high gain and low noise figure necessary to deliver "snow-free" TV pictures and "hiss-free" FM sound to your TV/FM receiver. These mast-mounted units bring your TV/FM tuner to the antenna to take full advantage of extremely weak signals by overcoming noise pick-up and antenna lead-in losses.

Each "De-Snower" is shipped with a remote power supply (to be placed at any easily-accessible location) which provides low-voltage ac power to the preamplifier and acts as a feed-thru for amplified signal from the pre-amplifier to the receiver. Only one cable is necessary to carry ac power up to and amplified signal down from the preamplifier to the power supply.

"De-Snower" preamplifiers will improve color TV reception and boost TV/FM signal strengths in al fringe areas. See SPECIFICATIONS chart to determine which model is best suited for your particular needs.

"TRAP-EASE"
TUNABLE INTERFERENCE TRAPS



BEFORE

AFTER

Eliminate adjacent channel interference, permit reception of weak, distant stations normally blocked by a strong local channel.

"TRAP-EASE" KNOCKS OUT ADJACENT CHANNEL INTERFERENCE. This tunable "deep notch" antenna trap (greater than 50 db) permits TV viewers to remove "beat" or "herringbone" patterns caused by adjacent channel sound or video carriers. Permits clear reception of even weak distant stations.

Works with any TV receiver and any 300 ohm antenna that would normally bring in pictures from the distant stations if the interfering adjacent channel was not on the air. Does not affect reception of regularly viewed channels.

TWO MODELS AVAILABLE

LOW TRAP-EASE (Model HQ-91) covers Channels 2 to 6.

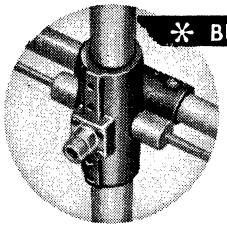
Precision Industrial Antennas by SCALA

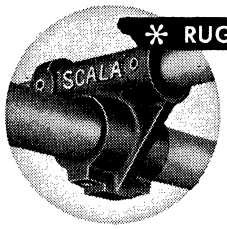
Why you get better performance with Scala Antennas–



✲ BUILT-IN BALUN

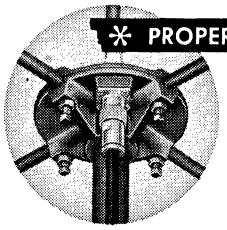
(pat. pending)

Provides a balanced feed system assuring equal distribution of current to the driven element, greater electrical and mechanical stability. The balun allows the driven element to be supported by metal and eliminates the necessity of using the insulator as a mechanical support.



✲ RUGGED CONSTRUCTION

Elements are supported by machined castings providing a larger support area, damping vibrations and reducing the concentration of stress and metal fatigue. Mechanical splices are never used. All units are available in metals other than aluminum if desired.



✲ PROPER STRUCTURAL DESIGN

A machined casting, webbed for extra strength and structural support is used to hold parasitic elements in the ground plane antenna. Set screws and lock nuts provide simple assembly and easy installation.

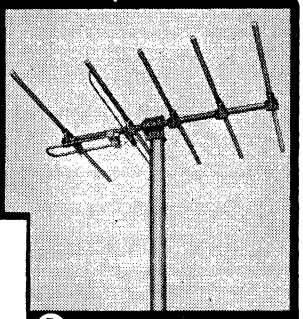
✲ BUILT-IN HEATER

Most of the antennas described below can be obtained with a 24 volt heating system for maximum weather protection and assured winter operation.

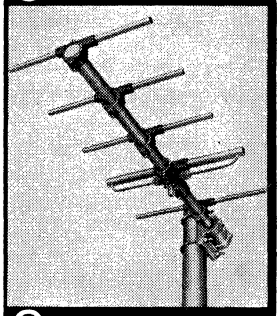
✲ TESTING AND INSPECTION

Each antenna is tested twice for impedance match—once during manufacture and again prior to dis-assembling for shipment. New models are field-tested for one year before released for production.

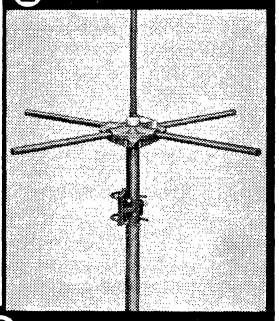
**Shipped complete—all U-bolt mounting clamps and brackets are included. Unit is ready for installation.*



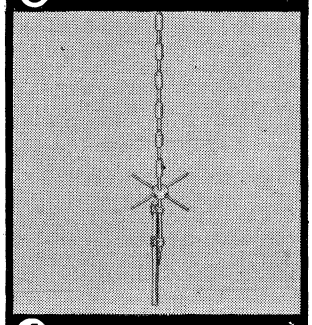
1 MODEL CA5-150



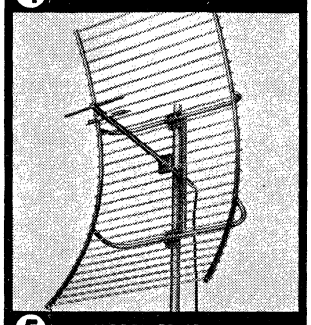
2 MODEL CA5-450



3 MODEL GPC-150



4 MODEL OG-6



5 MODEL PR-450

1 YAGI—VHF

The Scala Model CA5-150 is a 52-ohm 5 element yagi. Nine db gain on the major lobe is assured by careful design and Scala's exclusive feed system which eliminates radiation from the feed line and provides equal distribution of current to the driven element. The VSWR is less than 1.3 to 1. For complete weatherproofing and year-around operation, the boom can be provided with a 24 v heater. The unit is annodized and dichromate sealed.

2 YAGI—UHF

The Scala Model CA5-450 general communications antenna is a product of years of extensive research. Its construction is possible only because of developments in foam plastics and Teflon insulated cable. A Teflon insulated balun is located within a chamber filled with a special foam plastic for complete moisture and corrosion protection. High strength 7/16" solid aluminum rod is used for the parasitic elements. VSWR is less than 1.3 to 1. Gain is 10 db. Two units may be mounted in an array for an increase in gain up to 3 db and greater directivity. Shipped completely assembled, the unit is annodized and dichromate sealed.

3 GROUND-PLANE—40-170 MC

The Scala Model GPC-150 ground-plane antenna is ideal for non-directional, all weather communications. It is the first ground-plane antenna that can be obtained with 24 v heaters throughout — including the radial elements, providing a completely weatherproof and safe year-round operating antenna. Another version of this unit, comes equipped with a reflector and provides a cardioid radiation pattern with increased gain. In all cases the VSWR is less than 1.3 to 1. The unit is annodized and dichromate sealed.

4 OMNI-DIRECTIONAL GAIN ANTENNAS

Scala's Omni-Directional Gain Antennas—150 Mc and 450 Mc—use half-wave independently fed radiators. Model OD-4 (150 Mc) provides 4 db plus gain over dipole; Model OD-6 (450 Mc) 6 db plus gain over dipole. All elements at DC ground supported by metal. Extremely rugged anodized aluminum construction. Shipped ready for installation.

5 PARAFLECTOR®—350-1000 MC

The Scala Model PR-450 Paraflector® is a major contribution toward the improvement of antenna construction and performance in the 350 to 1000 mc range. Essentially, a parabolic section in one plane, the driver is positioned to approach a point source. Over the 350 to 1000 mc range, the Paraflector® is equal to a parabolic dish of the same aperture and has the advantage of lower cost, lighter weight, ease of assembly, installation and rugged construction.

EXACTING DESIGN—TESTED MATERIALS—PRECISION MANUFACTURE

In addition to the antennas described above, and other standard communications, telemetering and community systems, Scala maintains a complete engineering service to design and manufacture special antennas to your specific requirements.

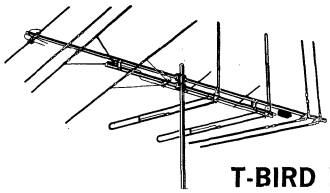
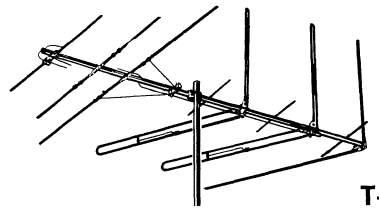
TACO the Complete Antenna line



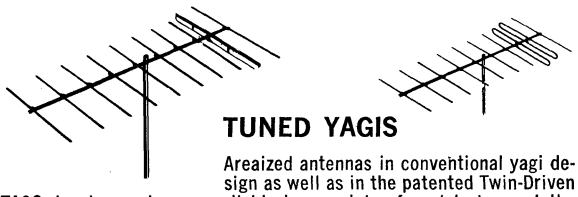
TRANSISTORIZED T-BIRD ELECTRA

All the inherent gain and sharp directivity characteristics of the famous TACO T-Bird—amplified electronically for the highest signal-to-noise ratio and the sharpest, clearest pictures obtainable. The T-Bird Electra increases gain more than 1000% over non-powered models. Ideal for color or black and white. Two in-built networks—for 2 TV sets, or TV and FM. Tremendous power permits feeding any number of receivers through distribution systems*. Transistorized circuitry eliminates costly, bothersome tube burnouts. Powered by house current. Available in three models. The right one for every area.
***Several additional receivers can be fed from the "Electra" utilizing TACO multi-set couplers.**



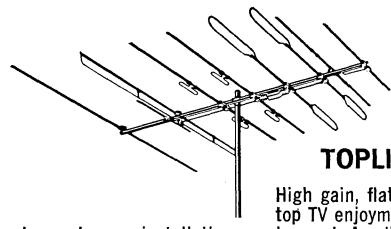
T-BIRD ANTENNA

The world's most famous non-powered broad-band VHF antenna. Provides flat response across every channel at very high gain. Three models available, with gain of each designed to meet the requirements of any reception area. Stacking lines obtainable to meet the most extreme problem area needs. All TACO T-Birds are rust-resisting through the application of chromate finish on steel parts... Golden models completely protected by Golden Anodizing of **ALL** aluminum parts including connection terminals. Unique T-Bird design completely eliminates side lobes thus producing pictures that are noticeably sharper... clearer... brighter.



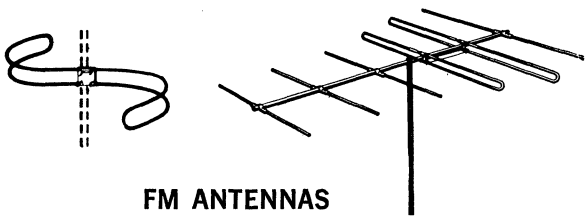
TUNED YAGIS

Areaized antennas in conventional yagi design as well as in the patented Twin-Driven TACO developments are available in a variety of models to meet the specific needs of the installer. Employing advanced engineering techniques, they are "tuned" to meet specific requirements, such as local conditions which would otherwise make TV viewing unsatisfactory or impossible. TACO areaized antennas are available in two series... Deluxe and Highlander models.



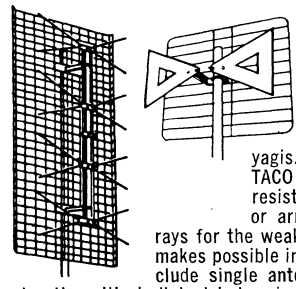
TOPLINER ANTENNAS

High gain, flat response VHF yagis for top TV enjoyment. Four models offered to meet every installation requirement. Anodized and iridited finishes result in 100% rustproof assembly. Also available in polished aluminum finish. Streamlined design, lightweight, and extra-strong construction make the Topliner Series ideal for use with rotors. Stacking lines available for extra gain.



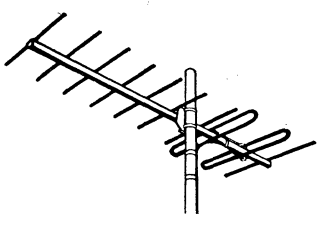
FM ANTENNAS

The most complete line of FM antennas offered. Omnidirectional designs include turnstile and S-shaped dipoles. Directional extra-gain yagis in various element designs for fringe and ultra-fringe areas. All TACO FM antennas are engineered for flat response over the entire FM band with optimum impedance match to transmission line for maximum transfer of signal.



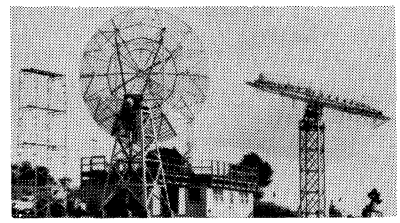
UHF TV ANTENNAS

UHF antennas for every installation, including bow-ties and yagis. Bow-tie series includes the famous TACO "open design" for minimum wind resistance. Bow-ties available in singles, or arrays, including ultra-high gain arrays for the weakest signal areas. Quick-rig feature makes possible installation in minutes. UHF yagis include single antennas and arrays. All welded construction with air dielectric terminal. To meet the special requirements of the Educational TV and Translator applications, TACO has developed a complete line of companion models, specifically tuned to these important communication frequencies.



RUGGEDIZED YAGIS

All-welded, all-aluminum construction, tuned-to-function yagis for community systems, off-the-air rebroadcasting, satellite transmission, point-to-point transmission, or any other application requiring the finest, longest-lasting service. Coaxial feed. Built-in balun. Available for any VHF or FM frequency. May be horizontally or vertically polarized. All types of mounting and stacking arrangements. Screen reflectors for multiple arrays.



TACO TEST SITE PROVES PERFORMANCE

TACO owns and operates the most comprehensive and complete engineering, development and testing facilities in the antenna industry. Many of the most advanced antenna systems for both the military and industrial markets have been designed and built by TACO. This experience, plus the outstanding facilities of the TACO organization are reflected in every TACO product through better performance, longer life, and maximum value.

AUDIO/VISUAL/SIGNAL SYSTEMS & PARTS
FOR HOTELS — MOTELS — INSTITUTIONS

INSTITUTIONAL ELECTRONICS FOR OVER 25 YEARS

Dealers, Installation and Service groups, Laboratory workers, Designers, now may obtain in less than production quantities, all the equipment and materials necessary to complete a variety of electronic Systems installations. Technicians are invited to discuss specialized applications of these Systems; all required materials, including multi-conductor cable in necessary footage, will be made available, and custom equipment can be designed and built. Available Systems include the following:

Status Controls (for hotel/motel rooms, factory production, test and inspection procedures, hospitals, etc.)

Signal Mail Rack	Area Sound/Lighting
Message-at-Desk	Selective Paging
Maid Call	Motel-O-Phone
Master Radio/TV Antennas	Automatic Wake-up
Centralized Radio	Emergency Alert
Room TV · Stereo Sound	Automatic Fire Alarm
Public Address	Audio/Visual (silent) Call
Background Music	Doctor's Call Board

Closed-circuit TV (for hotel and motor-inn auto registration and check-out, convention halls, industrial and laboratory monitoring, school systems, apartment buildings, department store advertising, remote inspection).

Projected installations using **AMERICAN COMMUNICATIONS CORPORATION** equipment will be laid out by **AMERICAN'S** Professional Engineers, on architectural plans, without cost or obligation.

Fig. D. No. A-P5-A Guest-room Radio Panel. Has added Maid Call Jack and Status Keyswitch. Light on office control boards does not blink until Maid plugs into jack. Inspectress or Maid can return status to green (available) when room has been readied. Panel is 9″ x 2½″ high.

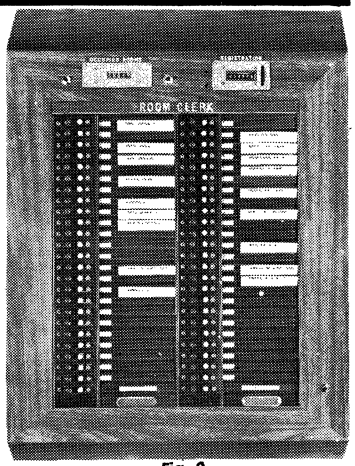

Fig. C. No. 707-1/50 Automatic Status Control, 50 rooms. Room Clerk unit has Totalizers, Registration File, Maid Call signal (blink light), remote status control (if desired). Cashier and Housekeeper unit do not include Totalizers or Registration File.

STATUS CONTROLS—(ROOM TYPES)

AMERICAN COMMUNICATIONS CORPORATION manufactures two basic types of Status Controls — Manual, and Automatic. A Status Control installation, although primarily a means of instant contact and control beween two or more offices (interconnected by multi-conductor cable), makes conveniently available a number of other desirable facilities **at only slight additional cost.**

Status Controls are applicable wherever sequential control and monitoring are wanted — as in hotels, motels, factories (for production control), laboratories (process control), hospitals (between Head Nurse, Cashier and Housekeeper), offices (message handling), missile check-out (data handling), etc. In hotel/motel use, room rental is accomplished more rapidly and conveniently. (See available bulletins.) Specialized installation applications are solicited.

Manual—The Manual type, using lamps controlled by slide-switches, is represented by the Leamertronic model. In hotel/motel room control, 3 panels are provided, one each for Room Clerk, Cashier, and Housekeeper; or, a **combination panel** is used where one person can conduct the duties of Room Clerk and Cashier by using two separate rows of switches (see insert, Fig. A).

In operation, Room Clerk registers guest, records name on a standard hotel-type Registration File (optional), opposite a green light (room available), and moves a slide switch. Instantly, the room's green lights in 3 offices change to yellow (room rented); when the Cashier moves his switch the 3 yellow lights change to red (room to be readied). The Housekeeper now has control, and after maid has readied room, moves her switch to change color back to green—room available. (Room Status can be shown continuously to management by an office Monitor panel provided only with lamps — no switches.) This System is suitable for installations of up to 1,000 room units, and in older buildings difficult to wire to each guest room. If centralized radio is wired to each room, the Model L-2, Figs. A and B, can be recommended. **It has an additional light for Maid Call.** When maid plugs into a jack in the guest room, a fourth lamp on each of the control boards shows white, indicating maid is in room. Details in **Bulletin LSI.**

Automatic — AMERICAN COMMUNICATIONS' Model 707 Automatic, the result of over 25 years' experience in the hotel/motel electronics field, accomplishes the same purposes as described for the Manual type, but by means of relays and lampswitches instead of slide-switches, affording greater operating speed and additional features. To operate, clerk just presses lampswitch to change status indication. Ideal for hostelries with high room turnover.

(1) Totalizers can be provided to show total occupancy at any given moment, and total rentals over a given period.

(2) Housekeeper knows by blinking light in which rooms maids are working (and, where System includes Maid Call facility, can contact them without annoying guests in rented rooms).

(3) Maid or Inspectress may assume control, and change status from red to green, when room is ready for occupancy, by pressing a button on a panel in the guest room. Other features and facilities, many of special value to Design Engineers, are detailed in **Bulletin 707.**

SPECIFICATIONS — Models Leamertronic and 707
Available in console, flush or surface-mounting, in banks of lamps and switches to suit space and number of room units. Specify facilities wanted. Consoles and Desk-top models of wood-grain plastic to suit decor; panel controls are mounted on steel plates. Flush and surface mounting Status Controls are on steel panels finished in velvet black enamel. Boards operate on 110 V. A-C; house wiring carries only low-voltage D-C, and circuits are designed for long lamp life. Lamps are standard, low-current type.

AMERICAN'S No. A-22X/- Multi-conductor Cable is used between boards, and No. A-19/2 Twisted-pair is used for house wiring to remote room units.

Quotations, upon request, will depend upon panel construction and finish, number of room units, features desired, and length of cables and wiring. No charge for laying out installation on architectural plans, where AMERICAN'S equipment is used.

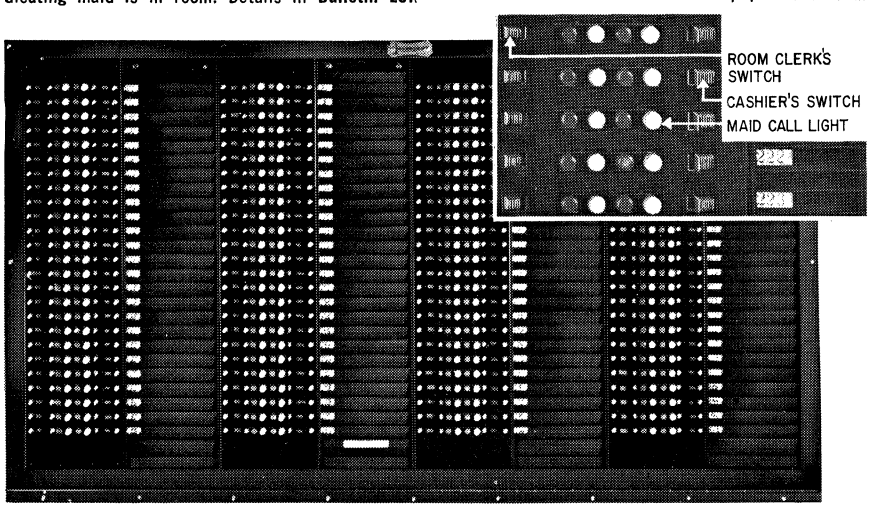

Fig. A. Leamertronic No. LC-2/100 Manual Status Control, 100 rooms. Room Clerk/Cashier Combination Panel has two separate columns of slide-switches, a Registration File, and Maid Call lights (see insert). Up to 1,000, or more, rooms can be accommodated by the L-1 and L-2.

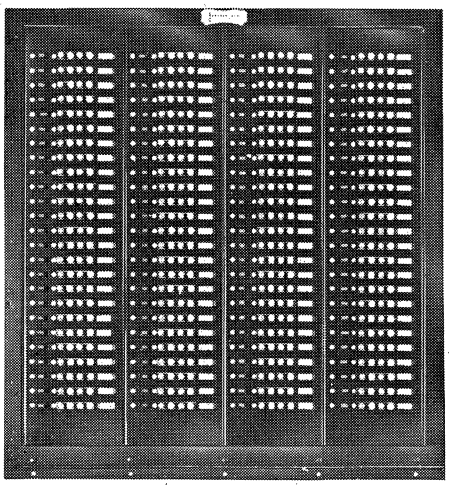

Fig. B. Leamertronic No. L-2/100 Manual Status Control, 100 rooms. Housekeeper Panel w/Maid Call Lights; (Cashier Panel, if separate, has same appearance). Piano-hinged at bottom, like No. LC-2/100, for servicing. More than 1,000 rooms can be accommodated.

SIGNAL MAIL RACK & MESSAGE-AT-DESK

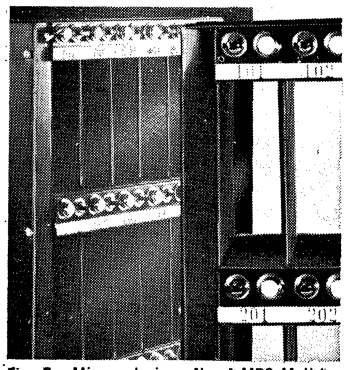

Fig. F. Mirrored view, No. A-MR2 Mail/Message Rack, **showing both sides.**

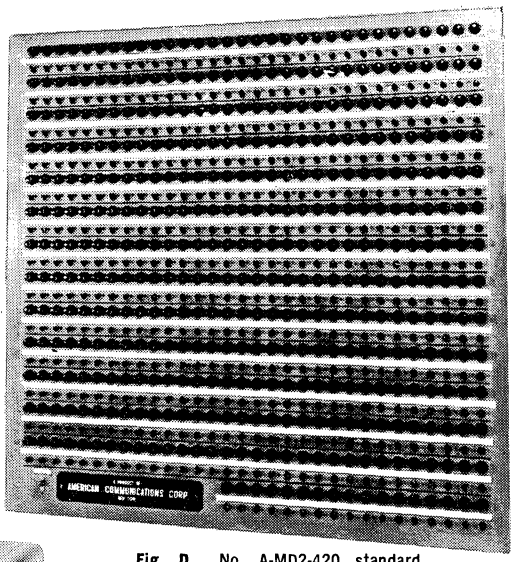

Fig. D. No. A-MD2-420 standard flush Panel-type, 420-room Message-at-Desk unit. Metal panel is approx. 38″ sq. x 2½″ deep. Supplied with or without rear cover.

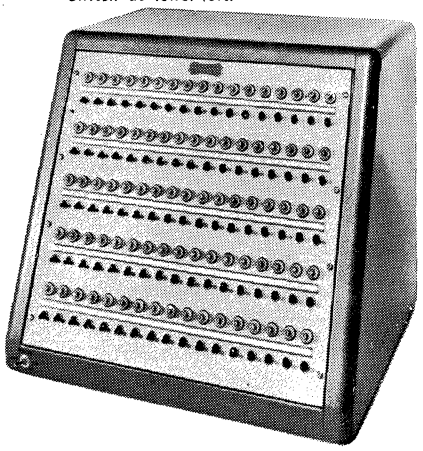
Fig. C. No. A-MD1/85 standard Desk-top type, 85-room size, Message-at-Desk unit, in metal cabinet approx. 19″ x 19″ x 22″ wide, overall. Off-On Power Switch at lower-left.



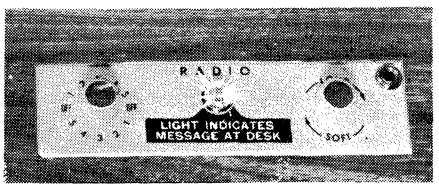


Fig. G. No. A-P4-A Radio/Signal Plate, w/Maid Call jack.

AMERICAN COMMUNICATIONS manufactures two signal systems, either of which may be used to expedite message and/or mail handling in hotels, motels, schools, factories, hospitals, and other institutions.

The **Mail (and Message) Rack Signal System** is comprised of numbered pockets, one for each room (or other unit), and a lamp and switch for each pocket, Fig. A. Each pocket is wired to a guest-room. When clerk files mail (or messages) in pocket, he switches on a corresponding lamp; simultaneously, a duplicate lamp in the remote room lights, and remains lit until guest acknowledges the signal, Fig. B.

The **Message-at-Desk Signal System** is identical with the Mail Rack System, except that there are no pockets — only lamps and switches mounted on a control panel. Message clerk — usually the telephone operator — signals to guest that there is a message (or mail) by moving a switch as above described. Figs. C, D.

The Racks and Panels are available in a variety of constructions to suit individual requirements as to location and number of rooms, and in standard or special finishes as decor dictates. The Mail Rack is available with shelf at top of each pocket for room key, Fig. E. A new 2-Way model, No. A-MR2, with access from either side and lamps and switches on both, enables Mail Clerk to insert mail from one side and silently signal guest, and for Telephone Operator to insert messages from the opposite side (and also signal the guest), as shown in a close-up, Fig. F.

If guest room is not wired for radio, a separate wall plate, Fig. B, is provided for the signal lamp; otherwise, it can be included on the radio control panel, Fig. G (for example).

Long-life lamps in Signal Mail Racks and Message-at-Desk units are easily replaced from front. A metal stop strip across the back of each row of pockets, in the standard or No. A-MR3/Mail/Message Rack, permits insertions only from front. The model shown in Fig. A is for 100 rooms, but units can be built to suit 1,000 or more. They may be made for flush-wall (recessed) or surface-wall mounting, or desk (table-top) mounting. An easily removable end cover plate permits access to wiring. Power Supply unit (included) is controlled by toggle switch. House signal wiring carries only low, safe voltage.

Fig. B. No. A-P20-3-A Signal Plate, in guest room, 4⅝″ sq.

Quotations upon request.

SPECIFICATIONS

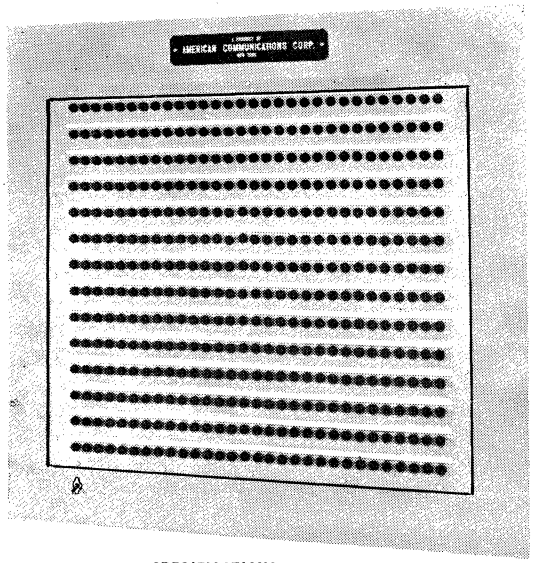
AUDIO/VISUAL/SIGNAL SYSTEMS & PARTS
FOR HOTELS — MOTELS — INSTITUTIONS

MAID CALL SYSTEM



The **Maid Call System** provides a signal and 1-way communication between the Housekeeper's office and guest rooms; 2-way communication can be provided if desired. The standard installation is comprised of a No. A-MC Light Panel, Maid Jack, 2-conductor cable, Microphone, and Audio Amplifier. In operation, Maid plugs into jack in guest room, which lights a lamp on the Housekeeper's Light Panel, who then has only to talk into her microphone to give the maid instructions. System permits Housekeeper to contact all maids at one time, without disturbing guests.

House rooms may be wired with No. A-19/2 Twisted-pair. Microphone (w/press-to-talk switch) and Amplifier may be standard, good-fidelity types.

SPECIFICATIONS

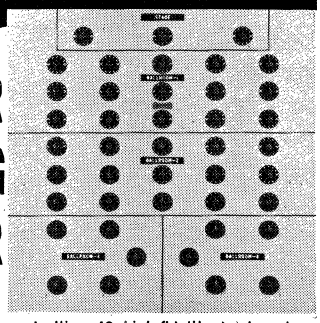
Panel dimensions and finish to be specified. Standard finish is gray Hammertone. Panel material is steel. Each Panel is supplied complete with Power Supply. Available in flush, surface or desk-top mounting construction.

No. A-MC/420 Maid Call Light Panel, 420 rooms, flush-wall-mounting type, is on a steel plate finished in gray Hammertone. Has designation strip for room numbers above each row of lamps. Uses 24 V. screw-base lamps, removable from front of panel. Off/On Power Switch (shown at lower-left).

Dimen., overall, approx. 21″ x 21″ x 3″ deep.

Quotations upon request, for any complement of materials, and for any number of rooms.

SPEAKER SWITCHING CENTER



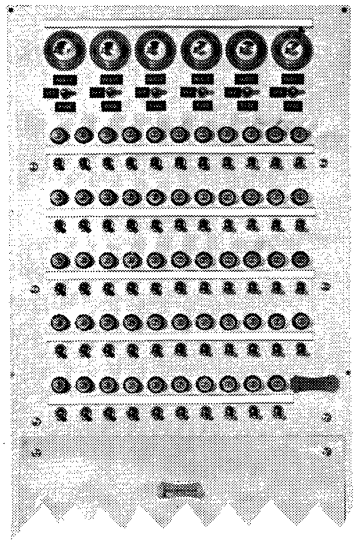
Problem: Provide a means of controlling 43 high-fidelity loudspeakers in a large public room, so room can be partitioned into 5 acoustically isolated areas and specific sound programs directed only to these areas. **Solution: AMERICAN'S** No. A-SC/43 Speaker Switching Center. In this example, 43 5-position (and OFF) switches are shown mounted on a metal panel outline-marked to show the available 5 area divisions — a Stage and 4 Ballrooms — of a Main Ballroom. Switching Centers can be designed and built to suit other room and speaker layouts. The switches are spotted on the layout in the same relative positions as the 43 (ceiling) speakers.

Designed to meet Convention needs, the No. A-SC/- Switching Center is located in the Radio Control Room. Its switches terminate in 3-circuit jacks, to permit patching into a jack field in associated Master Control Board. Speakers in any area can then be connected to receive programs originating anywhere.

SPECIFICATIONS No. A-SC/43 Speaker Switching Center, for 43 high-fidelity loudspeakers. Panel is 1/16″ sheet metal, approx. 40″ sq.; assembly is approx. 3½″ deep. Finish: gray Hammertone; other finishes to order. Design of switches and circuit depend upon installation with which it is to be used. Mounting design — surface or flush — to suit location requirements.

Quotations upon request.

MESSAGE & MUSIC/PAGING CENTER



The unit shown here, **AMERICAN'S No. A-MD/MP/-** combination Message-at-Desk and Music/Paging Center, illustrates two useful design factors: (1) provision of an expansion area on the panel for the later addition of more room signals; and, (2) the integration of one facility with another. This design is applicable to any number of rooms.

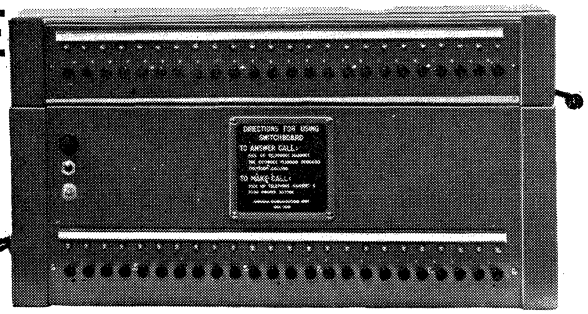
In this No. A-MD/MP/65, a Message-at-Desk signal is provided to 65 rooms, plus control of speaker volume in 6 public areas, with choice of music or paging in these areas at controlled volumes.

SPECIFICATIONS

No. A-MD/MP/65 Message & Music/Paging Center, 65 rooms. Steel panel measures approx. 21 x 46 x 4″ deep. Supplied with or w/out rear housing. Finish, pearl gray Hammertone.

Prices upon request.

MOTEL-O-PHONE SYSTEM



MOTEL-O-PHONE was specially developed by **AMERICAN COMMUNICATIONS** for use in Motels, Motor-Inns, and the smaller Hotels, as a low-cost, simplified central control and interior telephone service to guests. However, it is also admirably suited to an almost limitless number of other applications — in factories, schools, hospitals, laboratories, etc.

A complete Motel-O-Phone installation for 48 telephones, as illustrated here, is comprised of the following:

1 — Model 100 Basic Unit (24 positions)
1 — Model Add-A-Board (24 positions)
49 — French-style Desk Phones, ea. w/bell
(*) — Wire, 2-conductor
(Wall Telephones, each with bell, can be supplied in place of Desk Telephones.)

Add-A-Board units are purchased only where the number of Desk Telephones to be installed exceeds 25 (as in above example). Therefore, the Basic Unit can be bought initially, and one or more Add-A-Board units only when needed. No skill to install more — just place one Add-A-Board atop the other, and connect by means of a 3-prong plug!

No experience to operate!

(1) **To ring station,** after having turned on Basic Unit, press button numbered for that room or location.
(2) **To receive station call, lift handset.** This stops bell ringing.

When a station rings in, an annunciator plunger, one of a row under the designation strip, projects from panel and remains so until operator manually resets it by pushing it back. **This allows operator to answer rooms which signaled during absence of operator.** A toggle switch controls A-C power to the Basic Unit. Above it is the Fuse Holder and below, a Pilot Light. Line fuse is replaceable from front of panel.

SPECIFICATIONS

No. A-MT Motel-O-Phone is a complete Multiple Telephone Switchboard, and operates on 115 V., 60 cy. A-C. Cabinet is steel, finished in scratch-resistant gray enamel. Desk and Wall Telephones are finished in dull black enamel. (Other colors to order.)

Model 100 Basic Unit measures approx. 22¼ x 8 x 6½″ deep; Add-A-Board units, 22½ x 3½ x 4¾″ deep. Approx. net weights, respectively, 30 and 12 lbs.; Desk or Wall Telephones, approx. 6 lbs.

Prices upon request.

(*) Quantity sufficient for connection between Basic Unit and Room Telephones.

MASTER RADIO OR TV ANTENNA SYSTEM

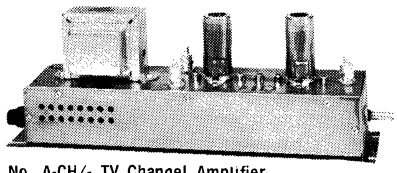
Installation requirements for an **AMERICAN COMMUNICATIONS** Master Antenna System, whether for Radio or TV — or both — mainly depend upon field signal strength and local interference. A field-strength survey must be made to determine whether the received signals are sufficiently strong and reasonably "clean".

If TV signal strength in the area is low, a No. A-BA weatherproof Broadband Booster Amplifier (shown mounted on mast) located at the antenna may be used, for an additional 25 db gain on all VHF channels; power supply and Off-On control are a separate, remote unit, No. A-BAP (not shown), which may be up to 500 ft. distant. Input 300 or 75 ohms, output also 300 or 75 ohms. Terminals permit use as Broadband, High-band, or Low-band Amplifier.

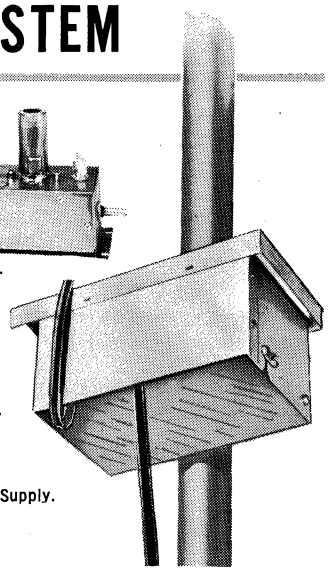
The Radio signals are fed to the Centralized Radio System, and the TV signals are distributed to the various TV risers.

TV signals on UHF channels may be converted to unused non-adjacent VHF channels by means of a No. A-U/V-C Converter (not shown); its UHF Mixer head mounts at antenna, and delivers VHF signal to remote oscillator. Specify the UHF and VHF channels. Converters are also available to cover VHF High to VHF Low, No. A-U/V-C1.

To deliver adequate signal strength at each TV outlet, it usually is necessary to use low noise, high gain, head-end amplifiers, one for each channel. A No. A-CH/- is shown here. A group of up to 7 such channel amplifiers can be assembled in one steel cabinet, No. A-C/CH/- (not shown here).



No. A-CH/- TV Channel Amplifier.



No. A-BA TV Booster Amplifier.

SPECIFICATIONS

No. A-CH/- TV Channel Amplifier. Bandwidth, 6 mc.; gain, 45 db. Low-noise cascode input. Output, 1 V. per ea. two outputs.

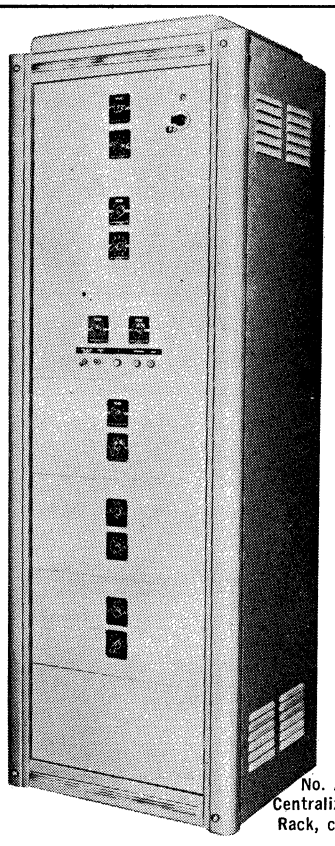
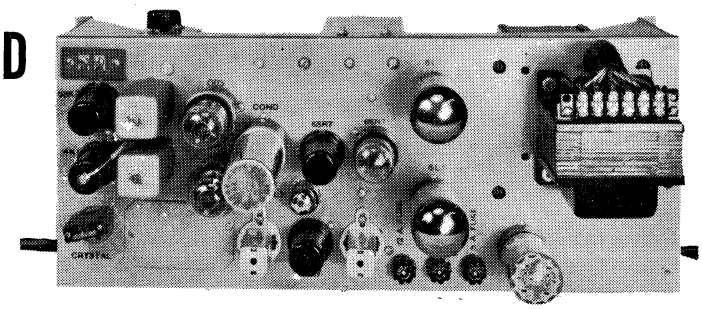
No. A-CH/- Channel Amplifier. Specify which of channels 2 to 13.
No. A-C/CH/- Channel Amplifiers in Metal Cabinet. Specify channels.

CENTRALIZED RADIO SYSTEM



No. A-CR Centralized Radio Rack, complete.



No. A-300C Radio Receiver.

The **control center** of **AMERICAN COMMUNICATIONS'** "Channelized" Radio System is the No. A-CR Rack Unit shown here. In this System, the signals from the Antenna System are fed to the Rack-and-Panel assembly, where they are received, detected, amplified and distributed as audio signals to remote speakers (guest rooms, public areas, etc.) through a system of properly selected cable and matching components as specified by the Supervising Engineer.

No. A-CR Rack can be modified to suit requirements. The standard Rack, however, is comprised of 4 **AMERICAN** No. A-300C AM Crystal-controlled Radio Receivers, 1 No. A-300T AM Tunable Radio Receiver, a panel-controlled No. A-P/M Preamplifier/Mixer (for mixing a high-impedance microphone and phonograph), Monitor Speaker, power supplies and controls, and Timer (*). The Radio Receivers deliver a minimum of 35 watts audio power. (Additional amplification, if needed, is incorporated in a second Rack.)

If the tunable receiver is a No. A-300F (for FM reception), the house manager may tune it, like the A-300A AM Radio Receiver, to a continuous-music station for background music, available to guest when he switches to this channel — within the operating hours automatically controlled by the Timer (*occasionally elsewhere than on Rack)

The Monitor Speaker (optional) has same response as room speakers for true check of programs as received in guest rooms. It is hinged to side of Rack, approx. 50" from floor. Switching permits its use on background-music circuits, P.A., etc.

If Rack is to be used with **AMERICAN'S** Emergency Alert System, the standard model will include 8 hermetically-sealed relays — one each for the 5 radio receivers, one in preamplifier/mixer, one in the automatic timer circuit, and one in a booster amplifier circuit. (The 1-stage booster amplifier is required only for Emergency Alert installations). These enable remote Emergency Alert equipment to assume control and deliver to all the loudspeakers a suitably high signal whenever needed, regardless of off-on status of Rack, room speaker channel-selector switch, or P.A. system.

Rack can include additional facilities, as for example switching into Muzak or other wire line, or use of tape or record player, for background music. For **Stereo FM reception,** using a multiplexed FM station as the source of both stereo channels, a Stereo Multiplex Adaptor is added to the existing FM receiver, and the two resulting audio channels are fed to stereo equipment.

Receivers are high-fidelity type, with push-pull output. The No. A-300C Radio Receiver is shown here; No. A-300T, and -F, have same physical dimensions and general appearance. Several features make these receivers exceptionally reliable and efficient: (A) the single electrolytic capacitor is plug-in type for servicing convenience; (B) circuits are triple-fused (one each for power line, filament supply, high-voltage supply); and, (C) voltage regulator tubes limit surge potentials to safe values. For trouble-free performance over long periods of continuous operation in commercial service, only close-tolerance, high-quality components are used, and operated within wide safety margins, in a rugged-ized receiver design.

SPECIFICATIONS

Rack

The No. A-CR Centralized Radio Rack is made of cold-rolled steel 1/16" thick; panels are aluminum, 3/32" thick. Standard finishes, Rack and Panels, slate gray or black ripple enamel. Rack amply ventilated by louvers on 3 sides. Easy-access rear door has slip-joint hinges. Rack measures approx. 68 x 22 x 18" deep. Fully fused; use on 20 A. mains service, 115 V., 60 cy. Supplied completely equipped as described.

Radio Receivers

Receivers are separately available. Both are same size. Overall dimen.: approx. 19 (w/flanges) x 11 x 7" deep (plus ¾" for condenser shaft). The No. A-300T Radio Receiver has 3-section variable condenser for manual tuning; No. A-300C crystal-controlled model (illustrated) has 2-section. Condensers, once adjusted, can be locked in position. Crystal frequency must be specified. AMERICAN will supply Crystals in FT-243 holder.

Tuning range, 540-1,720 kc.; sets have 1 RF and 2 IF stages. Output transformer has taps that present balanced load impedances to the following lines: 4, 8, 16, 600 ohms, and 70 V. Rated audio output, 35 W. Each Receiver has a Selector Switch, knob-controlled from front of panel, for selection of (1) Radio; (2) Microphone or Phonograph; and, (3) Muzak, or other wire line.

Tube complement, No. A-300T: 1, 6SA7; 2, 6SK7; 2, 0D3/VR150; 1, 6SR7; 1, 6SN7GTB; 1, 5AR4; 2, 6L6GC. No. A-300C has same complement, except 6K8 replaces 6SA7.

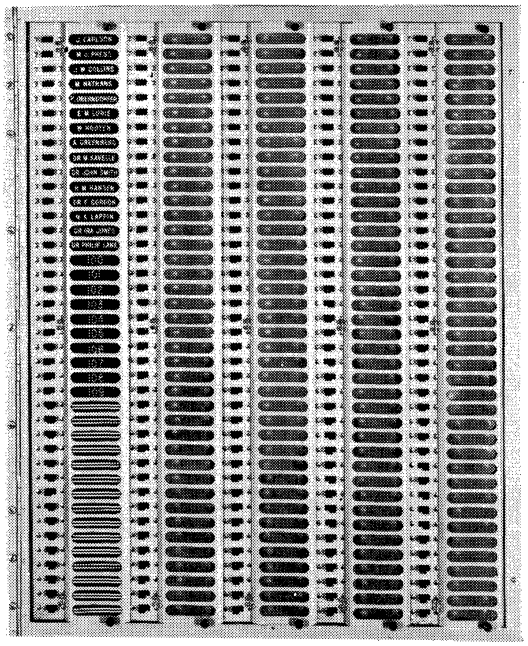
DOCTORS CALL BOARDS



No. A-DCB/200 Doctors Call Board, 200 names. Also available w/Message Signal, Intercom, etc.

Shown here is **AMERICAN'S** Doctors Call Board, flush-mounting type, as built for 200 names. Other sizes and mountings to order. May be used wherever rapid, convenient check-in and check-out are wanted — especially for doctors, and other special personnel.

A column of switches at left of a column of translucent designation strips permits doctors to indicate whether they are on duty. Upon arrival, each moves his respective switch to ON, which illuminates his nameplate; leaving, he moves switch in opposite direction, to OFF. This "IN" Board can be operated by a Receptionist, instead. As doctor may arrive at an Entrance door, and leave by an Exit door, a second or "OUT" Call Board must be provided at this Exit.

Additional Call Boards but without switches can be provided in the offices of, for example, Head Nurse and Superintendent's offices, to constantly show and instantly signal the doctor on-duty status.

Doctors Call Board is also available with Message-at-Desk facility — **without requiring additional wall space!** When giving a "message" signal, in this model, the lamps under a name strip slowly blink off and on until signal is acknowledged.

Another Call Board model provides Intercom facility. This conveniently allows physician upon arrival to receive his message without delay, and upon leaving to give special instructions to the front desk (which may be remote from exit).

Still another is double-sided, so illuminated name can be seen from both Doctor's side of Call Board and from Telephone Operator's side.

SPECIFICATIONS

No. A-DCB/200 Doctors Call Board, 200 names, is on a steel panel approx. 26 x 32" overall; unit is approx. 3" deep. A piano hinge at left permits entire panel to swing outward for servicing. The individual nameplate panels, too, are hinged, and swing outward for easy replacement of names and lamps.

No. A-DCB2/- Doctors Call Board, identical with No. A-DCB/-, except including Message Signal.

No. A-DCBX/- Doctors Call Board, identical with No. A-DCB/-, except without switches, for remote monitoring (only).

No. A-DCB3/- Doctors Call Board, identical with No. A-DCB/-, except including Intercom.

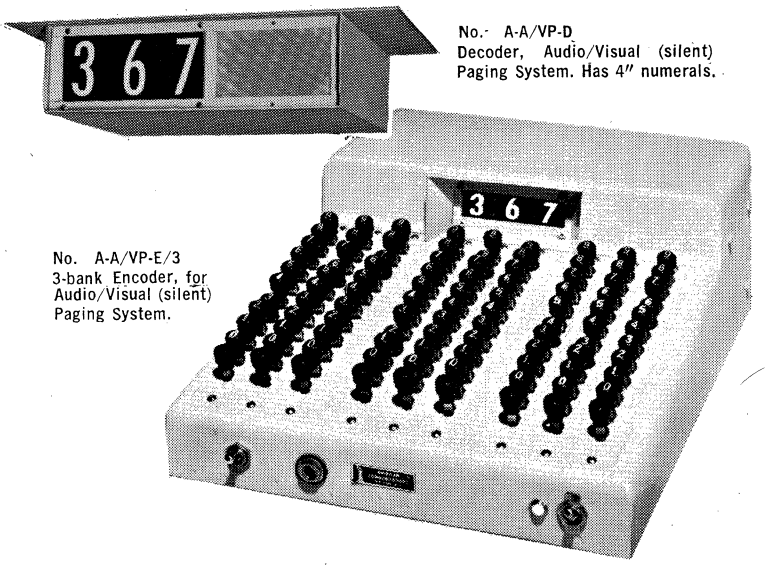
Standard finishes, gray crackle or flat polar white enamel. Other finishes to order. Number of names, etc., to suit.

Prices upon request.

AUDIO/VISUAL (SILENT) PAGING SYSTEM



No. A-A/VP-D Decoder, Audio/Visual (silent) Paging System. Has 4" numerals.

No. A-A/VP-E/3 3-bank Encoder, for Audio/Visual (silent) Paging System.

Designed for use with a Call Board, **AMERICAN'S** Audio/Visual Paging System presents an efficient means of personnel paging in hospitals, department stores, schools, hotels, factories, offices, etc. (Don't add to room noise — use Silent Paging!)

In operation, a designated person (Telephone Operator, for instance, in a hospital) sets up on a desk-top Encoder, the call number assigned to a person (doctor or nurse) whose attention is wanted. This can be any number from 1 to 999 per bank of push-buttons. This number then instantly appears in the window of remote readout indicators or Decoders, wherever located. The called person can acknowledge the call in a variety of ways — by house 'phone or Intercom, for instance.

Encoder No. A-A/VP-E/3 shown here has two additional banks of buttons which permit two additional calls to be set up at the same time, and by automatic switching, each will be signaled, in sequence, 20 seconds after the preceding one. Or, by operating a switch, any one of the three sets of numbers can be held in view and shown steadily until acknowledged.

A jack on the front skirt, for microphone, permits audio paging, emergency instructions, etc. A pilot light indicates the "ON" condition. Encoders may be located in several offices, and Decoders at any number of remote points. The System has many applications, and the number of push-button banks built into the Encoder will depend upon these applications; also, an Intercom facility can be incorporated into the design. Decoders with Intercom, available in either 1-unit or 2-unit construction, permit point-of-signal reply.

SPECIFICATIONS

Encoder No. A-A/VP-E/3, 3-bank, is a desk-top unit in metal housing. Dimen., approx. 11 x 5¾ x 14" deep. Operates on 115 V., 60 cy. A-C.

Decoder No. A-A/VP-D is a signal/speaker assembly in metal housing approx. 25 (incl. flanges) x 5¾ x 15½" deep. This unit is surface-ceiling mount type; other types of mounting can be supplied. Speaker is 5" PM type in an acoustic chamber designed for maximum intelligibility. Readout unit displays numerals 4" high that are readable at over 60 ft.

Standard finishes: Encoder, buff enamel; Decoder, flat polar white enamel. Other finishes to order.

Prices upon request.

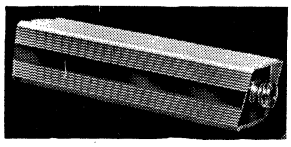
CLOSED-CIRCUIT TELEVISION



Modern Closed-circuit Television Camera has remote- control zoom lens, high resolution to 800 lines at 1 ft./candle! Also, remote control of pan, tilt, focus, iris.

AMERICAN COMMUNICATIONS designed and installed the entire Closed-circuit TV System in the new Jack Tar Hotel, San Francisco, Calif., "the world's most electronic hotel", where guests check in and out by TV. We are prepared to assist, with engineering and equipment, others wishing to plan and install private television networks for hotels, hospitals, schools, stores, banks, luxury apartment buildings, traffic terminals, institutions and industry (here, direct television aids in quality control and automatic processing).

AUTOMATIC PRE-SIGNAL FIRE ALARM

The **No. A-309 Automatic Pre-Signal Fire Alarm** (not illustrated) is designed for hotels, schools, hospitals, apartment buildings, etc., as a means of eliminating panic in large buildings due to the sounding of general evacuation bells by the operation of heat detectors or manual break-glass stations.

A control panel assembly connected to heat detectors and break-glass stations in various locations enables attendant to check these locations in an emergency, take any remedial action necessary, and issue only a local alarm in controlled areas when possible. In occupancies where attendant is part time, or not on duty, alarm can be switched to full automatic.

GENERAL SPECIFICATIONS

No. A-309 Pre-Signal Fire Alarm is comprised of a variety of Panels, Alarm Bells, Heat-rise Detectors, Pre-signal Stations, power supplies and wiring, to suit installation.

System quotations and apparatus prices upon request.

EMERGENCY ALERT SYSTEM

The undulating, siren-like tone of **AMERICAN'S** (patented) automatic electronic Emergency Alert System commands instant attention in an emergency.

The control center of the system is a conveniently located Emergency Alert unit resembling a Fire Box. In operation, operator breaks glass covering switch, and moves switch to SIREN or TALK. In either case, remote relays (usually about 7 in number) take over the amplifiers and loudspeakers in the related radio and P.A. systems, and the priority electronic siren or emergency instructions are heard at high level in guest rooms and public areas, regardless of the sound program previously being received, and even if set is off.

Mounted on the front of the steel Emergency Alert box are the SIREN-OFF-TALK switch in a glass-covered recess, a chained hammer, red pilot light, dynamic microphone (for issuing emergency instructions), and an instruction card. Within box are the electronic siren, audio power amplifier, spare tube, power supply, connecting strip, and a relay.

GENERAL SPECIFICATIONS

No. A-EA Emergency Alert unit. Steel signal box, enameled in Chinese Red, measures approx. 15 x 15 x 5" deep; has knockouts for conduit. Supplied equipped as described. Fully fused at 5 A. Operates on 115 V., 60 cy. A-C.

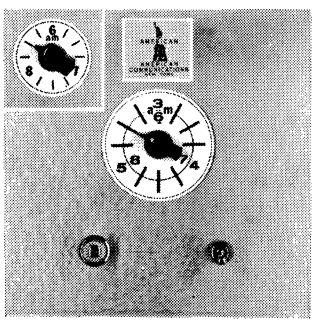
No. A-EAR Relays, for Emergency Alert installations. Multipole, to suit audio circuits into which they connect. Coils operate on 24 V. D-C. Heavy contacts. Hermetically sealed.

Prices upon request.

No. A-EA Emergency Alert signal box has electronic siren with warble sound.

AUTOMATIC WAKE-UP ALARM

This automatic facility, developed by **AMERICAN COMMUNICATIONS'** engineers, is based on the use of an electric clock and a continuous-play tape deck, with provision for operating a call signal at every quarter-hour through either a 3-hour or a 6-hour period — usually 7:00 to 10:00 or 4:00 to 10:00 A.M.



One of the time-set units on the No. A-WA/6 Master Control Panel at Front Office has 6-hr. switch dial, signal lamp, Off-On switch. Inset: dial of 3-hr. time-set switch, for Master Control Panel No. A-WA/3.

This **No. A-WA/-(3 or 6) Wake-up Alarm** ordinarily is operated by Room Clerk or Telephone Operator, who turns a control-panel switch to within a quarter-hour of the time at which guest wishes to be awakened. Operation is now fully automatic — Wake-up Alarm "remembers" calling time and sends a calling message at the proper time to the correct room.

Shown here is a single room unit of the master control panel in Front Office. This panel has on it a similar time-set switch, signal lamp and Off-On switch for every room.

The alarm is both visible and audible. At the designated time a lamp lights in guest room, and a recording advises guest to "shut me off". The call signal is acknowledged when guest turns a switch, which puts out light and ends the call signal.

This completely relieves house personnel of responsibility, since wake-up alarm is repeated until guest acknowledges call.

The guest-room signal lamp blinks in unison with a monitor lamp at Clerk's or Operator's desk until guest cancels signal, both audio and visual, by moving his switch. Even though guest's switch is now in his "off alarm" position it is still electrically in an "on alarm" position when Clerk or Operator again wishes to send a wake-up signal to the same room.

GENERAL SPECIFICATIONS

Installation includes a Front Office Master Control Panel for 3-hr. timing, No. A-WA/3, or 6-hr., No. A-WA/6, a No. A-TD continuous-play tape deck and recorded tape, pre-amplifier, and (if needed) room control panels. (System usually utilizes existing room radio facilities and apparatus — audio amplifier, speakers, room control panels, wiring, and ordinarily, there is space on the existing room control panel for signal light and switch.)

Size of Master Control Panel is determined by the number of rooms to be signaled; construction and finish to order. Equipment operates on 115 V., 60 cy. A-C.

Equipment prices upon request.

APARTMENT BUILDING ALERT SYSTEM

AMERICA'S No. A-EAB automatic and electronic Apartment Building Alert System (not illustrated) is an application of the No. A-EA Emergency Alert unit, and is particularly suited to apartment building complexes.

The **No. A-EA Emergency Alert** unit is connected to control boxes, an amplifier, and one or more weatherproof outdoor speakers. Upon sounding of alarm, distinctive, warbling-tone electronic siren can be heard by patrolman on beat.

GENERAL SPECIFICATIONS

No. A-EAB Apartment Building Alert System includes control boxes, No. A-EA Emergency Alert unit, 100 W, audio amplifier, weatherproof outdoor siren speaker(s), and wiring. Installation can include annunciator panel to show location of actuated alarm box.

System quotation and apparatus prices upon request.

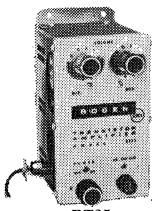
BT 25 MOBILE P.A. AMPLIFIER



BT25

A product of Bogen research . . . the BT25 is the first commercially available fully transistorized public address amplifier offering 25 watts of power from a 12-volt battery. So versatile it will serve scores of P.A. applications, the amplifier is so small it will fit in the glove compartment of your car.

The BT25 is perfect for use in cars, trucks and busses for regular public address or emergency use. Its hefty 25 watts of power make it ideal for fire department or police use, for disaster work and civil disturbances. It is also recommended for ships, carnivals, electioneering . . . wherever a small, high-powered, reliable P.A. amplifier is needed. Bogen's unique fully transistorized circuitry provides maximum power with minimum battery drain. When operated from a 12-volt battery, the drain is approximately 3 amperes at full output—85% lower than comparable vacuum tube amplifiers. When operated from a 6-volt battery, current drain is only 1.4 amperes at full output. The inputs of the BT25 are individually controllable, permitting mixing. A transistorized circuit insures ruggedness and long, trouble-free service not possible with conventional amplifiers (Bogen guarantees the BT25 for a full year). There are no tubes to burn out, no vibrators to replace. It is completely hum-free.

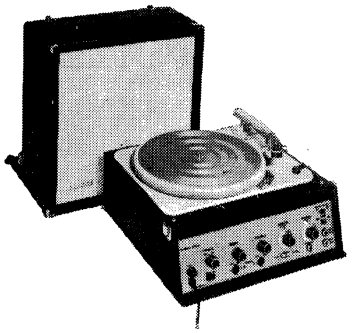
PORTABLE TRANSCRIPTION AND RECORD PLAYERS HIGH POWER INTERCOM-PAGING SYSTEM



Three New Portable Phonoplayer-P.A. Combinations Feature Variable Record Speed Control plus 10, 20 and 40 watt Peak Power Amplifiers

Models VP20 and VP40. These outstanding new portable phonoplayer—P.A. combinations are complete, self-contained, high fidelity phonographs with several important functional features. Especially suitable for square dancing, swimming instruction, calisthenics, and other group and school activities, continuously-variable-record-speed-control permits the record tempo to be adjusted to suit the tempo of any activity. The range is from 29 to 86rpm. And there are 'click' positions for normal playing of 16, 33⅓, 45 and 78rpm records. This variable speed adjustment also permits the pitch of any selection to be tuned to the pitch of any musical selection. Another unique feature is the automatic cueing device which automatically raises and lowers the tone arm at any desired position on the record, insuring the gentlest possible contact between stylus and record groove. The turntables are driven by heavy-duty 4-pole induction motors to insure constant speed, once selected, with no detectable rumble, wow or flutter. Turntables will handle discs up to 16 inches in diameter and are supplied with adapters for 'large-hole' 45rpm records. Both models feature inputs for two microphones and tuner to permit use as P.A. and radio amplifiers, also scratch filters, individual bass and treble controls, convenience outlets for auxiliary equipment, and special outputs for use with new speaker-amplifier monitoring package designed for square-dance callers. The VP20 and VP40 are as distinctive for their attractive, modern styling as they are for their versatile utility.

Model VP20 (illustrated) delivers 20 watts of peak power, and is housed in a single portable case with removable cover which serves as the speaker baffle. A heavy-duty 12-inch P.M. loudspeaker is supplied, and 25 feet of speaker cable.

Model VP40 (not shown) with 40 watts peak power is supplied with two heavy-duty 12-inch loudspeakers, and is housed in two matched cases. One contains the phonoplayer and electronic equipment, and the other—a split case—has one loudspeaker in each separable section, and is provided with 25 feet of cable for each speaker.

Model VP40 with G.E. dual-sapphire variable reluctance cartridge ---------- List Price: **$269.50** (Zone 2: **$276.60**)

Model VP10. Here is a complete 10-watt portable phonograph perfect for schoolroom, dance class and many other applications.

This sturdy mechanism boasts a conspicuous absence of audible rumble, and flutter or wow cannot be detected. As for convenience—there is an Automatic Motor Start: move tone arm to outer perimeter of turntable, hear it click, and it's rolling.

The VP10 will play all size records up to 12"—at all four standard speeds (16, 33, 45 and 78 rpm). **And** each of these speeds is adjustable for perfect pitch over a range of ±5% around the nominal speed. Optional lectern accessory (LEC-1) ideal for speeches or lectures.

NEW DELUXE ALL-TRANSISTOR BOGEN INTERCOM SERIES

The BOGEN all-transistor design obsoletes intercoms employing electronic tubes . . . gives you instant communication the moment the system is turned on. No warm-up time, no costly tube replacement.

The new TIX Series is a result of exhaustive BOGEN research combined with thirty years of design and production experience. Here, truly, are instruments of superb performance and flexibility.

Models TIX-24 and TIX-11 are housed in "Seville" textured, semi-gloss mocha cabinets that match the decor of the finest offices. Finish is durable, attractive and easy to clean. TIX models are AC operated thoughout, and provide plenty of power to over-ride noisy locations.

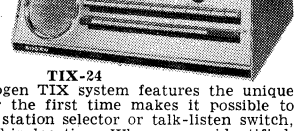
The versatility of these intercoms is without parallel. Whether your requirement is for a single master and a number of remote stations, for a system exclusively of master stations, or for a combination of master and remote stations, the TIX Series, is the perfect solution. Additional stations may be added at any time. The TIX system may also be connected to your paging system permitting plant-wide paging and announcing.

Operation is simplicity itself. Model TIX-11 has 10 station selectors. Model TIX-24 has twenty-three. To initiate a call, merely push the appropriately marked piano key station selector, depress the talk-listen lever and speak. To receive a reply, remove your finger from the lever, which automatically returns to the listen position. You control the incoming volume, adjusting it to your personal satisfaction.

It is impossible for a TIX master to be eavesdropped upon by any other station in the system, unless desired. TIX instruments reproduce the spoken word with sparkling clarity.

Two types of remote stations are available. RIX-1 can initiate a call to one master station; the RIX-6 can initiate a call selectively to any one of six masters. Any remote can be called by any master. In non-private installations replies can be made without operating any control. The remote stations are so sensitive that replies can be made from distances up to twenty feet.

CHIME CALL-INITIATION — In TIX systems, master stations are freed of the disconcerting interruption of incoming voice calls. Call-initiation is effected by a chime signal which repeats automatically, at short intervals, until the called station replies (a concealed switch permits conventional voice call-initiation where this is required).



TIX-24

AUTO-RESPOND SWITCH — The new Bogen TIX system features the unique Bogen AUTO-RESPOND switch, which for the first time makes it possible to reply when called without operating either station selector or talk-listen switch, and even without the caller identifying his location. When an unidentified master station calls another TIX master station, the latter need only actuate his AUTO-RESPOND switch and talk. No further hand operations are necessary during the entire conversation. When an unidentified remote station calls a TIX master station, the latter actuates his AUTO-RESPOND switch and then operates his talk-listen switch (the RECORD-A-CALL light indicates whether the unidentified station is a master or remote). Since a master station with AUTO-RESPOND switch in the activated position can be listened to by other masters, a light reminds the user that his station is in non-private mode.

RECORD-A-CALL FEATURE—When a master initiates a call, the called station's chime sounds and its RECORD-A-CALL light goes on. The called party may reply when ready; if absent from his desk when initially called, he notes the recorded light indication on his return.

PRIVACY—The TIX master is designed so that remote stations can be assured of privacy (no eavesdropping possible), and the master can hear the remote only when the remote is in the non-private position. Remotes have a three-position mode switch: private position, non-private position, call position. A TIX system may be arranged to include both private and non-private remotes.

CALLED STATION AVAILABILITY LIGHT—A time-saving feature consisting of a light which indicates that the master station you desire to call is not in conversation with another station. Press the station selector; if the light goes on, call the station.

SPECIAL ACCESSORIES FOR TIX SERIES:

PRS-11 and PRS-24 Power Supplies for up to 11 and 24 station systems respectively.
ACP-1 All-Call Adapter which permits any master to page all master and remote stations simultaneously.
JB2 Junction Box for easy installation.
FIX-1 Outdoor Remote Station weather-proof design—flush mount panel.

FM MULTIPLEX ADAPTOR MX-99

Kit $39.95 **Wired $64.95**

An original EICO contribution to the art of FM Multiplex reception.

The new EICO MX-99 Multiplex Adaptor incorporates the best features of both the matrixing and sampling techniques. It is free of phase-distorting filters and provides the required, or better-than-required, suppression of all spurious signals including SCA (67kc) background music carrier, re-inserted 38kc sub-carrier, 19kc pilot carrier and all harmonics thereof. This is very important for high quality tape recording, where spurious signals can beat against the tape recorder bias oscillator and result in audible spurious tones in a recording. This adaptor will synchronize with any usable output from the FM tuner and will demodulate, without significant distortion, tuner outputs as high as 10 volts peak-to-peak (3½ volts RMS). The MX-99 is self-powered and provides entirely automatic stereo/mono operation. A separation of 35 db between channels is typical across the entire audio spectrum. Low impedance cathode follower outputs permit long lines. The MX-99 is designed for all EICO FM equipment (HFT-90, HFT-92, ST-96), and component quality, ratio detector FM equipment provided with a multiplex output.

STEREO DUAL PREAMP HF85

Kit $39.95 **Wired $64.95**

Offers practically every control and switching facility anyone could want in a physical design adaptable to any type of installation. With it, you can select, preamplify and control accurately, any stereophonic source—tape, discs or broadcasts. Extremely low distortion, bordering on the unmeasurable (even at high output levels), precludes any degradation of quality from the best modern program sources. Self-powered, utilizing a full-wave rectifier tube power supply. Works in conjunction with any two high quality power amplifiers, such as the EICO HF14, HF22, HF30, HF35, HF50 and HF60. Separate low level input in each channel for mag. phono, tape head, and microphone. Separate high level inputs for AM tuner, FM tuner, and FM Multiplex. Also two auxiliary A inputs (one in each channel) and two auxiliary B inputs (one in each channel). Independent level controls that may be operated together with built-in clutch. Independent full-range bass and treble tone controls in each channel, may be operated together with built-in clutch.

Switch permits hearing each stereo channel individually, also use of unit for stereo or monophonic play. Stereo channels may be reversed. On monophonic record playback, channels are mixed for rumble cancellation. 30 db feedback amplifier pair reduces tone control distortion to unmeasurable levels in each section. Low impedance output to tape recorder, useful on all inputs. New "low-silhouette" construction matches EICO tuner. Very attractive when placed on a shelf or out in the open, yet permits easy console installation with full shielding and adaptability to any panel thickness. **Frequency Response:** ±0.3 db 5-200,000 cps at any level up to 3V RMS out. **Sensitivity (input for 2V RMS output at 1000 cps):** Mag. 100-WATT STEREO DUAL POWER AMPLIFIER HF89

Kit $99.50 **Wired $139.50**

Represents the utmost in audio quality. Each power amplifier is conservatively rated at 50 watts and employs the thoroughly proven cathode-coupled phase inverter-driven circuit, preceded by a direct coupled voltage amplifier. Fixed-biased, push-pull EL34's are used in the output stage and provision Is made for both bias and dc balance adjustments. The very low impedance characteristics of silicon diode rectifiers gives the common power supply for the two amplifiers very good regulation. As a result, signal conditions in one amplifier have negligible effects on the operating conditions of the other amplifier. Surgistor limits starting surge currents, insuring long life for the silicon diode rectifiers, electrolytics, and tubes. High circuit and component quality result in less feedback required to achieve the very low distortion figures, so that the HF89 has excellent stability margin.

Output Power: 100 watts (two 50-watt amplifiers) continuous, 200 watts peak. **IM Distortion:** (60 & 7000 cps at 4:1): 0.5% at 100 watts. **Harmonic Distortion:** Less than 0.25% from 30 to 15,000 cps and less than 1% from 20 to 20,000 cps within 1 db of 100 watts. **Frequency Response:** ±0.5 db 5 cps — 100 Kc. **Rise Time:** 2.5 μsec. **Square-wave Response:** Essentially undistorted to 20,000 cps. **Inverse Feedback:** 18 db. **Stability Margin:** 13 db. **Damping Factor:** above 12, 20 cps to 20 kc. **Channel separation:** 60 db. **Sensitivity:** 0.55V for full output. **Hum:** Better than 90 db below full output. **Controls:** Level Ch. 1, Level Ch. 2, "Service Selector" switch, ON-OFF switch. **Speaker Connections:** 4, 8, and 16 ohms. **Tubes:** 1—ECC83/12AX7, 2—6SN7GTB, 4—EL34, 2—silicon diode rectifiers (power), 1—selenium rectifier (bias); surgister protected for long life. **Power Source:** 117V, 60 cps. **Power Consumption:** 215 watts at no signal, 270 watts at 100 watts out. **Size:** (HWD) 6″ x 15″ x 11″. **Weight:** 40 lbs. Matching cover E-8: $3.95.

2-WAY SPEAKER SYSTEM HFS5

Complete with factory-constructed enclosure. Easy to assemble — no gluing necessary.

	Semkit	Wired
In unfinished birch	$47.50	$56.50
In walnut or mahogany	$59.50	$69.50

New techniques in loudspeaker engineering developed by EICO enable this bookshelf-size, 1¼ cubic foot ducted-port enclosure to provide remarkably clean, deep, smooth bass with good efficiency. The HFS5 includes a specially-designed, bellows-suspension ⅝″ excursion Jensen 8″ woofer (45 cps res.) and a Jensen 3½″ closed back tweeter of exceptional quality. The Q of the HFS5 system is ½ so that the speaker is critically damped when used with any modern amplifier of normal damping factor (7-20). Critical damping gives the smoothest possible frequency response and the best transient response. Frequency response is essentially uniform (±0.5 db) from 52 to 14,000 cps. 16 ohm impedance. HWD: 24″ x 12½″ x 10″.

2-WAY SPEAKER SYSTEM HFS1

Complete with factory-constructed enclosure. Easy to assemble — no gluing necessary.

Semkit $39.95 **Wired $47.95**

Cabinet expertly constructed, furniture-quality, tuned-bass-reflex, acoustically engineered by Jensen for the woofer supplied. All visible surfaces smooth-sanded, clear-grained birch hardwood. Heavy-duty 8″ Jensen woofer: High energy ½-lb. Alnico 5 DP magnet. Response engineered for smooth cross-over to tweeter at 1800 cps. Jensen tweeter: Compression-driver loaded by cast aluminum Hypex* horn. Small, precisely controlled and loaded diaphragm is free of "breakup" and the accompanying excessive peaks and dips in the frequency response.

3-WAY SPEAKER SYSTEMS HFS3 AND HFS4

Each complete with factory-constructed enclosure. Easy to assemble — no gluing necessary.

	Semkit	Wired
HFS3 (includes cone tweeter):		
In unfinished birch	$72.50	$84.50
In walnut or mahogany	$87.50	$99.50
HFS4 (includes horn tweeter):		
In unfinished birch,	$83.50	$96.50
In walnut or mahogany	$98.50	$112.50

Another EICO first in high fidelity — unusually pure and full reproduction of very deep bass frequencies with normal efficiency in a ducted-port enclosure of only 2¼ cubic feet! Both the HFS3 and HFS4 include a specially designed, bellows-suspension, full-inch excursion Jensen 12″ woofer (22 cps res.) and a Jensen 8″ mid-range speaker with high internal damping cone for smooth response. A Jensen 3½″ cone tweeter is supplied in the HFS3 for those who prefer a softer, more delicate quality in the highs; a Jensen compression-driver horn tweeter is supplied in the HFS4 for those who want more brilliance and greater projection in the highs. (In all other respects, the HFS3 and HFS4 are identical.) Both speaker systems have a system Q of ½ for flattest frequency and best transient responses. Frequency response is essentially uniform (±5 db) 45-14,000. cps 16 ohms impedance. HWD: 26⅜″ x 13⅞″ x 14⅝″.

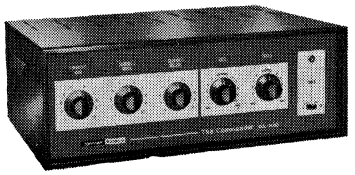
These new models represent a desirable departure from the limitations and restrictions commonly associated with other than "deluxe" amplifiers; in fact, they incorporate features entirely exclusive with Harman-Kardon. Ruggedly constructed for day in and day out continuous duty, The Commander Series is capable of performance and dependability well beyond that expected of such moderately priced equipment.

Some features found in Harman-Kardon amplifiers: Built for Continuous Duty. Anti-Feedback Filter. Master Volume Control. Fader/Mixer Controls. Multiple Inputs—All at Rear. Magnetic Cartridge Input. Individual Bass and Treble Controls. Tape/Booster Output. Low Noise and Low Hum. High Input Sensitivity. DC on Filaments of High Gain Stages. Independent Power Switch. 25 and 70 Volt Outputs. Plug-in Speaker Sockets. Locking Panel Cover and Phono Top for All Models. Prices Include Cage.

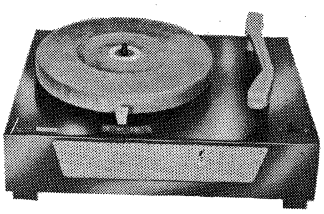
THE COMMANDER DA-12, 12 Watt PA Amplifier

Designed to accommodate a wide variety of applications, this versatile moderate-power amplifier has a high gain channel for direct use with any crystal, ceramic, reluctance or dynamic high impedance microphone. Sufficient gain is available to operate any low impedance microphone, using any of the popular cable type matching transformers. Two "aux." channels are provided for connection to a crystal or ceramic phono, tuner or tape recorder output. These channels employ a single "fader" type gain control, so that two such program sources may be connected and controlled with a single knob, thereby achieving smooth, electronic change-over between the two programs. A master volume control is also included, enabling the total amplifier power output to be varied without disturbing other control settings. A 4-position filter adjusts the system for best music response, reduction of turntable rumble or record scratch, and protection of outdoor trumpet speakers against low frequency overload. An exclusive "anti-feedback" position equalizes frequencies most sensitive to the generation of feedback "howl" without reducing articulation, thus achieving maximum power output under difficult acoustical conditions. A separate output is available to drive a booster amplifier or tape recorder. Separate on-off switch permits the entire system to be turned off without changing any control settings. Plug-in speaker socket and aux. AC power receptacle are also included. **$75.00 List**



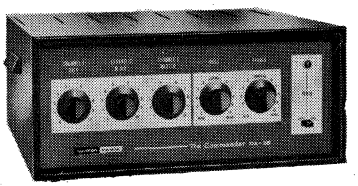
THE COMMANDER DA-100, 100 Watt PA Amplifier

Here is truly the powerhouse of PA amplifiers—the new DA-100. 100 watts of distortion-free power at a price you'd expect to pay for 70 watts! A magnificent continuous duty amplifier, the DA-100 incorporates all of the unique facilities and operational advantages of the DA-35. DC on all low level stages virtually eliminates hum. Use of hermetically-sealed 800 P.I.V. silicon power rectifiers insures low heat and a highly regulated, efficient power supply. The extra reserve power of the DA-100 insures cool-running, trouble-free performance under any load condition. It permits future expansion of a system without need to resort to additional booster amplifiers. The DA-100 represents exceptional value. Compare its specifications with units which compete in price—yet have a much lower output and few of its features. You'll discover the unique value, the handsome design, the flexibility, versatility and dependability of the DA-100 deserve your consideration when you're looking for reliable, trouble-free power. **$187.50 List**



THE COMMANDER PT-1, Phonograph Top

This excellent unit, designed for rugged duty, mounts directly to the top of models DA-12, DA-35, DA-100 (as shown at left). A heavy-duty motor provides all four recording speeds; idler has disengage position when player is not in use, to prevent "flat spots." The turntable is made of heavy gauge metal, flocked to protect record surfaces, and has a built-in center hole adapter for 45 RPM 7" records. Hum induction is prevented by the shielding effect of the ferrous metal turntable and the location of the tonearm. Quality turnover-type cartridge is included, for use with all size and speed records; standard replacement stylii are employed. A separate power switch is used to turn the player on and off. For use with 105-125v, 60 cycle AC. The Commander PT-1—**$37.50 List.**

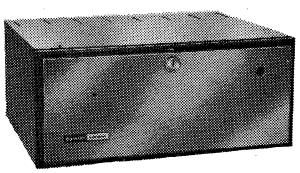


THE COMMANDER DA-35, 35 Watt PA Amplifier

If you're looking for an exceptional PA workhorse, the new Commander 35 watt amplifier is for you. This remarkable unit incorporates design features not found on any other amplifier. The unique input and control arrangements permit an unusual degree of installation and operational flexibility. There are four channels: two low level, high gain and two high level. Multiple inputs result in further versatility. Channel 1 offers a choice of either a microphone or switched input for magnetic phono cartridge. A choice of two inputs is also provided for Channel 2; one for a microphone and the other for use with any high level, high impedance program source regardless of sensitivity requirement. Channel 3 is also for high level auxiliary equipment, such as tuners, tape recorders, telephone lines, crystal or ceramic phono players. A fourth ("mixer") channel is incorporated which, when used, will feed any high level, high impedance program into Channel 2 through a tandem control so that both signals can be completely faded **or blended** in any desired amount—using **only** the Channel 2 control knob for especially convenient one-hand control. Ideal for square dances, demonstrations, lectures, etc. When not otherwise used, Channel 3 is **convertible** to a Master Volume Control for the entire system—thus preserving program balance and gain settings when adjusting total amplifier output. The DA-35 also includes separate bass and treble boost/cut tone controls; two plug-in speaker sockets in addition to the usual output terminal strip; separate On/Off Power Switch; aux. AC power receptacle. Output to a tape recorder is provided, independent of tone and master volume controls. Filtered DC on the filaments of high gain stages keeps hum to a negligible level. This is an amplifier you need never hesitate to use with the finest quality speakers, and it is rock stable, regardless of load conditions. **$119.95 List**

THE MODEL DPR-7, Combination Mixer/Preamplifier

An unusual **combination** unit professionally designed for use with any sound system. No matter how high the quality requirement, the DPR-7 fulfills the need for additional channels and is a practical way to expand a sound or recording installation. It is unlike any other popular-priced mixer in many respects: The self-contained power supply applies DC on all tube filaments. Frequency response and sensitivity are exceptional; hum and noise virtually non-existent. Seven inputs are provided, five low level, high gain and two high level. Channel 1 offers a choice of microphone or magnetic cartridge input; Channels 2 and 3 **each** provide a choice of microphone or input from tuner or tape recorder and crystal or ceramic phono player. All are switchable from the front panel, thereby making it possible to use these inputs at will without having to rearrange input connections. Channel 4 is another microphone channel which, however, is convertible to a master volume control for the entire mixer by a front panel switch. The DPR-7 is thus not only a highly versatile mixer but a superb, completely self-contained preamplifier which can **remotely** control multiple program sources. Adjustable re-set indicators are provided for all controls; no need to log or remember previous settings. Low impedance cathode-follower output permits long line runs to the main amplifier or to simply a basic power amplifier, and delivers sufficient voltage to drive several amplifiers simultaneously. Output to a tape recorder is also available, and an aux. AC power receptacle is included. The DPR-7 is self-supporting or may be front-mounted into a wall, cabinet, etc. **$75.00 List**



MODELS LC-1 AND LC-2, Locking Panel Covers

The Commander's special locking covers prevent tampering or accidental change to the precise control settings of your equipment. The amplifier pilot light is visible at all times through the aperture in the cover. The LC-1 fits models DA-12 and DA-35; the LC-2 fits the DA-100. No tools are needed for installation; the covers take only seconds to insert or remove from cage. Two keys provided. Model LC-1—**$8.50**; Model LC-2—**$9.00 List.**

No matter what price level . . .

if it's a NEWCOMB,

it's DEPENDABLE!

Sound installations vary greatly in their needs of complexity as well as requirements of cost. Yet, one important feature is required of all —dependability. No matter how complex, or how simple and inexpensive your needs may be . . . you can enjoy utmost dependability by insisting on a Newcomb amplifier for your sound system. No product bears the name Newcomb unless it is inherently dependable, no matter on what price level you find it. Under the Newcomb name there is only one standard for quality . . . *the best!* Newcomb amplifiers vary in their complexity, but never in dependability. Quality of parts, materials or workmanship are never sacrificed here to gain lower price. Lower cost of one Newcomb model as compared to another is always entirely the result of greater simplicity.

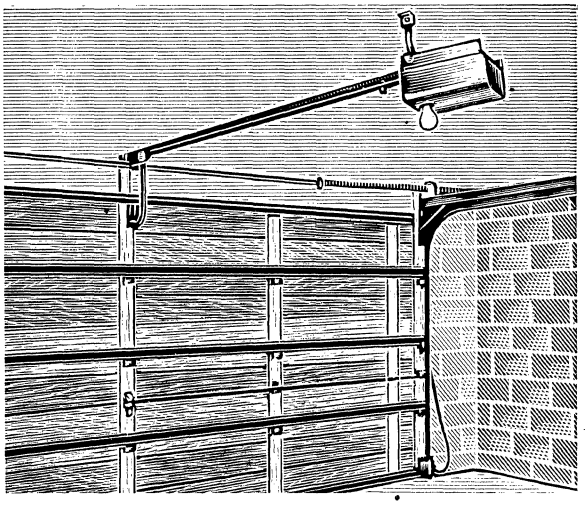
Perma-Power® Electronic Equipment

PERMA-POWER RADIO CONTROLLED GARAGE DOOR OPENER

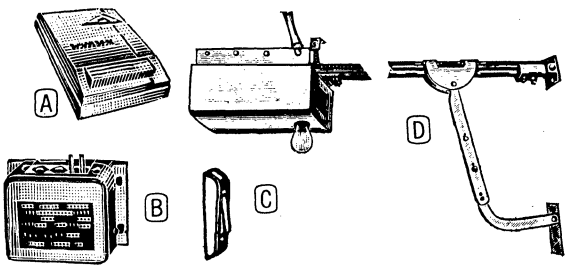


ALL-TRANSISTOR, PRINTED WIRING DESIGN ASSURES MAXIMUM RELIABILITY AND LONG LIFE WITH LOWEST OPERATING COSTS.

DOOR REQUIREMENTS—The Perma-Power Garage Door Opener will operate all one-piece tilt-up or sectional roll-up residential doors that travel on horizontal or curved roller tracks. Doors may be up to 18′ wide and 8′ high and of metal or wood construction. As little as 1¾″ of headroom (space between high-arc of door and ceiling) in garage is adequate for installation.

INSTALLATION—Entire system was designed to make installation an easy one-man job. Simplified step-by-step instruction manual assures fast, professional results using common hand tools. Every part required is supplied, including mounting materials.

SYSTEM COMPONENTS



OPERATIONAL FEATURES

- Powerful three-transistor transmitter outperforms tube type units. Operating distance is more than 50 ft. with the portable transmitter; more than 100 ft. with the installed transmitter.
- Sensitive six-transistor receiver turns on the motor mechanism when it gets a signal from the transmitter in the car. The receiver is completely pre-installed in operator housing.
- When button is pressed, door automatically opens and turns on fixture light, illuminating garage. When button is pressed again, door automatically closes and locks securely. No conventional key lock required.
- New, exclusive, safety feature—light remains on for two minutes after door is closed to permit safe exit.
- Automatic shut-off gives extra protection. If door hits an obstacle, power shuts off instantly. When started again, door reverses, pulling away.
- Sensitive safety clutch is easily adjusted by a screw to exert just enough force to move door reliably. This vital safeguard makes door travel gentle and, consequently, easy to arrest.
- A detachable door arm permits unlatching for manual operation of the door in case of power failure.
- A push button is supplied for wall mounting in garage or other location to operate door from inside. Additional buttons may be easily installed at auxiliary points. A key-operated switch is available for outside mounting.
- The radio control is certified for operation without license under FCC rules.
- An exclusive, coded signal for each radio control allows operation free from interference with and from neighboring installations and other electrical devices.
- Concealed motor is a ¼ HP, 117 volt, capacitor-start type with ample power to operate the largest of modern, residential, garage doors. Also in the fixture is the radio receiver which turns on the motor when it gets a signal from the transmitter in the car.

Ⓐ Portable Radio Control is a completely self-contained, three-transistor transmitter. Clips to sun visor; carry in pocket or purse; or, store in glove compartment or under seat. Complete with battery.

Ⓑ Installed Radio Control is a three-transistor transmitter for permanent installation under the car dash. Push button installs on the dashboard. Uses car radio antenna. With all hardware and wiring. For use in 12-volt cars only.

Ⓒ Push button Electric Control can be located wherever desired. More than one may be used. For outside control or from driveway post, use key switch listed below. (Uses 24-volt wiring.)

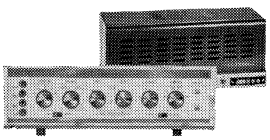
S-360



S-4400

The Model **S-4400** is designed for conversion of monophonic hi-fi to stereo and use with Model **S-360,** basic 40 watt music power amplifier to provide 40 + 40 watt stereo where installation space is limited by a narrow bookshelf, since only the 10½-inch S-4400 need be accessible for operation. The Model S-4400 features the identical controls, front panel, and dual preamplifiers offered in the S-5000 II described above. However, a single 40 watt basic power amplifier is offered instead of the two 40 watt amplifiers included in the S-5000 II. Connection of the S-4400 with any monophonic basic amplifier (such as the S-360) or monophonic amplifier preamplifier (such as the Sherwood S-1000 II) completes a stereophonic dual preamplifier-amplifier featuring one unified control panel. • 3 Separate 2-Way Conversations Simultaneously with 6 Master Stations

• Selective Paging with Reply

Provides selective communication. Each Master is equipped with a 6-channel selector; can converse with any other station selectively; can receive calls on any channel Master elects to use. As many as 3 separate conversations may be held simultaneously, with 6 Masters. Masters can talk with any station in system; can also set up conferences.

Wireless Staff Stations are for use where calls need not be originated, but where reply must be made. They are available for operation on any single channel desired—to match that of Master. They also can be used to receive Paging Calls from any Selective Wireless Master in the system . . . use as many Wireless Staffs as needed (all Staffs must operate on same channel for this purpose). Two or more Wireless Staffs on the same channel will function as a 2-Station System (without Master); they can originate calls and reply to each other.

Start a system with any number of Masters and Staffs. Where up to 6 stations are used, each on a separate channel, Master can converse selectively with any channel. If more than 6 stations are used, channels must be *shared*; stations on same channel will receive all calls to that channel. To change location, merely pick up unit and move . . . no rewiring or new installation is necessary. All stations are equipped with the original TALK-A-PHONE UNI-TRANS feature, which permits continuous one-way transmission for periods when you wish to dictate or "listen-in."

One Model Meets Every Requirement

Setting a new standard in quality, design and performance, the new TALK-A-PHONE "CHIEF" and "CHIEF REDI-POWER" meets every intercom need of office, factory, institution, or any other commercial or private application. "CHIEF" Master Stations of 6, 12, 20, 30, 40 or 50 station capacity can be intermixed with "CHIEF REDI-POWER" Masters of different capacities, together with Staff Stations and Horns within the same system in any desired combination. The same station can be "private" to one or more Masters and "non-private" to others, and retain full communication facilities.
- **INCOMING CALL CHIME**—A standard feature of Masters. Indicates that your station is being called. Caller talks, you reply.
- **MONITORING SIGNAL**—A standard feature of Masters and Staffs. Visually indicates to a "non-private" station that it is being monitored.

TALK-A-PHONE ALL-TRANSISTOR "CHIEF REDI-POWER" MASTERS These units have all the operational features of the "CHIEF," plus the additional feature of built-in extra power (up to 20 watts) for use when and as needed. Provides additional volume for calling many stations at once, or noisy locations singly. Needs no separate power booster, which would eliminate return speech. Return speech is received at normal room volume. REDI-POWER Masters have a self-compensating amount of volume, whether you call 2, 10 or 20 stations simultaneously. Each station receives its pre-determined volume with no division of output as you call more stations at once. Use REDI-POWER Masters with "CHIEF" Masters and Staffs in same system. Add RW-10 and REDI-POWER Masters can page any group of stations with a single selector button. Paged stations can also be used for intercommunication. Operates on 110-120 volts, AC only. U.L. Approved.

ATLAS "FULL GRIP—VELVET ACTION" MICROPHONE STANDS

NO SLIPPING — NO RATTLE — NO NOISE — NO SCRATCHING — NO WEAR

The "Full Grip" clutch is standard on all models—it offers an extended length clutch body, permitting a secure, full hand grip. The clutch mechanism of all "Velvet Action" stands is inner-lined with a wear-proof bakelite locking collet which grips without jamming, slipping or sudden dropping. All chrome plated surfaces are carefully polished prior to plating to assure a uniform "Super-Chrome" wear resistant, lifetime finish. All threads on tube assemblies are individually inspected to assure a perfect fit when assembled to the base castings. All bases are functionally designed to offer maximum stability for a given base weight. The maximum base mass is located at the outer periphery of the casting where the concentrated weight is most effective. All bases include self leveling, shock absorbing base pads, plus three additional "anti-tip" points located between the base pads. All models terminate with a 5/8"-27 thread at the microphone end.

MS-10C Economy model suitable for most applications where a low cost stand is required. Offers adequate base stability for average weight microphone.

MS-12C Similar to above but increased base weight offers an added advantage. Flat design of base is modern in appearance and is finished in a dark gun metal shrivel finish. Equipped with base pads to absorb shock.

MS-11C Full chrome design. Entire stand base and upright tube assembly completely finished in "Super-Chrome." Excellent for use where fine appearance is a requirement. An excellent choice for use with full chrome plated microphones. Equipped with base pads.

MS-4 Three section telescoping microphone stand permitting a wide variation of adjustment. Can be adjusted from 26 inches to 61 inches in height. Excellent for use in schools, etc. where it is necessary to adjust the stand over a wide range of height adjustment. Minimum collapsed length offers convenience in transportation.

MS-20 DeLuxe model. Maximum stability suitable for use with heavy, expensive microphones. Large oversize tube assembly, 7/8" diameter telescoping tube, 1 1/8" diameter base tube, base diameter 12 inches. Oversize clutch assembly assures secure locking adjustment. Top adaptor included for 5/8"-27 microphones.

MS-25 Professional Microphone Stand. The ultimate in microphone stands. Features the "Safety Air Lock Cushion." This sensational feature prevents any accidental or sudden slippage of the telescoping section. If the clutch mechanism is accidently released the stand cannot suddenly crash down—thus prevents damage to the microphone from severe mechanical shock. The telescoping section is at all times "cushioned on air" and the controlled escapement of air will only permit a slow smooth and quiet collapse of the stand. Base finished in a combination of chrome and shrivel. Heavy duty tube assembly, 1 1/8" and 7/8" combination—5/8"-27 top adaptor.

MS-11S - MS-12S Automatic "Sleeve Action" models. A fully automatic means of adjusting the height of the stand. A slight downward pressure on the "Sleeve Action" control permits the telescoping section to be lowered—cannot change its position without a deliberate pressure on the actuating sleeve control. Two models full chrome base or shrivel finish.

CS-1 Fully collapsible, portable stand quick and simple to set up. Collapsible to a minimum overall length of 23 inches.

CS-42 Collapsible base stand. All the advantages of portable type stand without the loss of stability inherent in cast iron base types. When legs are extened they are securely locked in position. Upright tube assembly full chrome, base finished in grey shrivel, base pads provided. **Packed: One complete stand to a single shipping carton.**

The 12 inch long, flexible, chrome plated "goose neck" arm is mounted on a spring loaded swivel so that the microphone can be swung aside when not in use. A feed thru hole is located at the mike end of the "goose neck" so that the mike cable can be concealed within the flexible arm. The cable enters under the base at the rear end of the "goose neck" resulting in a neat and workmanlike installation.

The heavy, functionally designed, base casting is rear loaded so that the base will not tip forward. The base weight is 13 lbs. and measures 9″ x 6½″. The finish is grey shrivel. Rubber bumpers fastened to the base prevents "skidding" and protects against damage to fine furniture finishes. Shipping Weight 13 lbs. "goose neck" threaded 5/8″-27. **List Price $14.00**

Wide comfortable chest support prevents rolling due to sudden movement. Flexible goose neck quickly removed if desired for use as hand held mike. Entire assembly can be placed on table top and used as conventional desk stand. Cool and lightweight weighing only 6 oz. **List Price $5.00**

FS-1 Microphone Foot Switch—for use with all high or low impedance mikes having single ended inputs. Shielded, grounded, noise free. Designed primarily for foot operation—its small size and neat appearance also permits it to be used as a hand operated switch on top of a table or switch board. Switch is a long life shielded micro-switch of a "press to open" circuit type. When switch is depressed the short is removed from the mike circuit and the mike becomes operative. Male type screw connector permits single insertion between the mike and amplifier input. Switch can be easily rewired internally for "press to close" circuit application. Measures 2½″ x 3″ **List Price $12.00**

CS Type Demountable Microphone Floor Stands—with full grip—"Velvet Action," fully collapsible—quick and simple "Come Apart" base design. This new and revolutionary design in microphone stands is ideal for fixed as well as portable applications. No small parts to become lost. The self-leveling legs are chrome plated, tipped with skid-proof rubber shock absorbent bumpers —eliminates vibrational conductivity ... protects polished floor surfaces against damage.

ATLAS PAGING AND TALK BACK SPEAKERS

All New Designs of HU and CJ type speakers are now equipped with the versatile "Versalock" mounting bracket. This new rigid, rugged and reliable bracket is completely adjustable on both a horizontal and vertical plane: Efficient: these speakers are especially efficient in the voice frequency range and provide the extra "punch" that overrides high level background noise. Talk Back: designed to offer a maximum of efficiency in talk back application. The peaked characteristics within the voice frequencies further add to the sensitivity of the speaker as a pickup device. All HU type speakers are constructed of aluminum. All parts are chemically processed prior to final finish in gun metal grey, high gloss, high temperature baked enamel. The CJ type speaker horns are constructed of nonresonant indestructible fiber glass. All models are 100% weatherproof under all climatic conditions.

HU-12N Small in size and low in cost. Excellent for low power paging and talk back systems where limited coverage is required. Ideal as a cone speaker replacement for many inadequate low power inter-com systems. Offers three times the sound level of a small cone type speaker at a given power input. Equipped with the versatile "Versalock" mounting bracket permiting "pin point" directivity adjustment.

HU-15N The "work horse" of paging speakers. By far, the most popular all purpose trouble free speaker of its type and size. Double sealed against weather conditions existing in all climates. Its response is excellent for voice frequencies and offers natural voice reproduction free from peaks that often cause acoustic feed back and poor intelligibility. "Versalock" bracket standard equipment.

HU-24N Very similar to the model HU-15N except that the air column is extended to improve the low frequency response and overall efficiency. Excellent for paging and talk back system that are also required to reproduce music in industrial and amusement locations. Equipped with "Versalock" bracket.

CJ-14N High efficiency speaker having a one piece outer horn constructed of fiber glass. The rectangular design of the horn opening results in a sound dispersion pattern having a wide horizontal beam, 100% weatherproof. Equipped with "Versalock."

CJ-30N A wide angle speaker of fiber glass construction that confines maximum power to a horizontal plane. The one piece horn completely covers all working parts of the driver unit assuring trouble free servjce in all climates. The exclusive "Versalock" bracket offers mounting facilities never before available on any speaker.

TP-15N Two way paging speaker offers economical bi-directional sound coverage. Universal mounting permits dual horns to be faced downwards or outwards from a wall surface at a 10° angle. A good choice for long corridors where one driver can do the work of two. Saves on installation costs.

TP-24N Same as above but equipped with over-sized horns offering lower frequency response and added efficiency. 100% weatherproof.

DU-12 The new DéCor Projector combines the intelligibility, directivity and high efficiency of a driver type projector with modern high styling that will harmonize with the most ultra modern décor. Finished in natural brushed satin aluminum. Two way adjustable bracket has a feed thru for connections. All wiring and line matching transformer concealed under canopy. All mounting hardware included for new and existing type installations.

ATLAS TRANSFORMERS—BAFFLES—ACCESSORIES

NEW MODEL DC-5 CONE SPEAKER TYPE "DECOR" PROJECTOR

The new DC-5 fills the long-felt need for a speaker with two desirable features: The small size and fine appearance necessary for the most discriminating applications; and pleasing low level reproduction of both voice and music.

Both of these features, along with many others, are incorporated in the design of the DC-5. The modern, straight-line, lighting fixture contours and the brushed natural aluminum finish are acceptable anywhere. The DC-5 is not obviously a loudspeaker; it does not offend or clash with surroundings, but blends into the background styling in an unobtrusive manner.

The DC-5 is designed around a high quality five-inch cone speaker, and is enclosed in a semi-directional housing. The effective low frequency response, as a result of the cone type reproducer, adds naturalness to voice frequencies and a pleasant timbre to low level musical reproduction.

The semidirectional horn and complete directional control of the mounting bracket permits the sound coverage to be confined to the required service area. It is therefore an excellent speaker for use in churches, funeral homes, hotel lobbies, restaurants and all reasonably quiet areas where appearance and ease of installation must be carefully considered. The DC-5 is semiweatherproof, and will resist dampness and humidity, but is not recommended for completely unsheltered outdoor application.

The "positive lock" bracket permits the speaker to be easily directed either horizontally or vertically. Connections feed thru the bracket, and all wiring, transformers, etc., are concealed behind the canopy. The canopy is equipped with an adaptor strap for an electrical outlet box or for direct mounting on a wall or ceiling surface. All parts are finished in brushed, natural aluminum, followed with a clear lacquer protective coating.

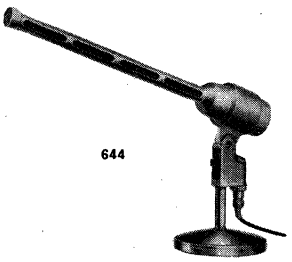
Electro-Voice GENERAL PURPOSE MICROPHONES

UNIDIRECTIONAL LINE MICROPHONE



644

Model 644 Sound Spot—Another Electro-Voice revolutionary development, the Sound Spot Model 644 is a combination cardioid and distributed front opening, making it the most directional microphone ever. The Model 644 has the farthest front pickup, or better than 2.5 times the working distance of pressure types. Work close or far away without change of frequency response.

Cancellation from the rear and sides exceeds 20 db giving practically complete rejection of unwanted sound. This feature gives the most rejection of random noise in any microphone commercially available. Reverberation and feedback are vastly lower than any other microphone, allowing much greater leeway in loudspeaker placement.

The effective front acceptance angle is 45° each side of center giving best isolation of individual performers. The Model 644 is 9 db better on the reduction of wind noise and has far less response to shock than all other microphones.

Frequency response is smooth from 40 to 12,000 cps. High output: −53 db. Dual high and low impedance selected by changing one tap on MC4M cable connector. The case is high-pressure diecast zinc with ¾" aluminum tube. Rear diameter 2¹⁄₁₆", length 16". Cable is 18'. Weight, 2 lbs. 9 oz. List Price.....**$110.00**

Acoustalloy diaphragm shielded from dust and magnetic particles. Response 40-15,000 cps. Output −55 db, On-Off switch. 150-ohm and high impedance. Impedance changed by moving one wire in MC4 cable connector. Pressure-cast case. Chrome finish. 18' cable. Size 7¹⁄₁₆" long, less stand coupler, 1⅛" diameter. Net Weight, 1 lb. 10 oz. PROJECTOR HORNS

Completely new designs assure finest performance with Electro-Voice projector horns. Two basic types from which to choose . . . compound and reentrant.

Exclusive compound horns permit widest range at lowest distortion, plus complete directional control of both highs and lows. Best wide-angle coverage with exclusive diffraction horns means better sound through entire coverage area for uniform coverage. Concentrating compound horn provides highest efficiency at lowest distortion. Natural voice and music reproduction result in higher intelligibility without annoying peaks.

Model FC100—Similar to the famous CDP, the FC100 provides two diffraction horns for uniform wide-angle coverage. Frequency response is not compromised since both horns are ideally designed to handle a specific portion of the range. Compound horn reduces distortion far below any other projector design. Flexible coverage control provided by individual adjustment of each horn, or concentrating high-frequency horn (HC1000) can be substituted for small diffraction horn. Large horn is of fiberglass with Mesa Tan finish molded in. Use any E-V convertible driver. Specifications: Low-frequency horn—cut-off, 100 cps; taper, 100 cps; air column length, 58″; sound distribution, 90° x 120°. High frequency sound distribution, 90° x 120°; crossover, 1,000 cps. Mouth size, 10½″ x 20½″, depth (less driver), 20″. Net Wt. (less driver), 10¾ lbs. Shpg. Wt., 12¼ lbs. List..**$50.00**

Model AC100—Concentrating version of CDP. Has all of the quality advantages of FC100, except utilizes round horns for most concentrated coverage with greatest efficiency. Retains compound design for lowest distortion—widest range. Diffraction high-frequency horn (HD1000) can be substituted for concentrating horn for flexible coverage control. Use any E-V convertible driver. Specifications: Low-frequency horn—cut-off, 100 cps; taper, 100 cps; air column length, 58″; sound distribution, 80°. High-frequency sound distribution, 30°; crossover, 1,000 cps. Diameter, 21″; depth (less driver), 21″; Net Wt. (less driver), 11 lbs. 6 oz. Shpg. Wt., 13½ lbs. List Price..**$47.00**

Model HD1000—Diffraction horn for converting AC100 to wide-angle (60° x 120°) coverage above 1,000 cps. Shipping Weight, 1½ lbs. List Price..**$6.00**

Model HC1000—Concentrating horn for converting FC100 to concentrated (30°) coverage above 1,000 cps. Shipping Weight, 4 lbs. List Price..**$10.00**

New reentrant horns provide wider range than ever before at lowest cost. Unique E-V ring reflector design provides better balanced highs than possible with conventional exponential designs, by reducing high frequency losses often encountered in reentrant horns. Smoother response plus added useful range increases intelligibility and adds to more natural sound. Rugged aluminum die cast mounting plate plus precision die cast reentrant tubes assure long-lasting performance. Heavy spun aluminum round bell or fiberglass rectangular horn provides either concentrated coverage or medium angle coverage. Electro-Voice Reentrant Horns accept any standard driver with 1⅜″-18 threads.

Model FR150—Reentrant Horn. Medium-angle low-cost rectangular horn provides good coverage at low cost. Virtually indestructible fiberglass horn has Mesa Tan color molded in. Adjustable mounting angle allows best coverage. Can be stacked for multiple speaker applications. Ideal for car-top installation or wherever low silhouette is needed, and where bass response cannot be sacrificed. Accepts Electro-Voice convertible drivers or any standard driver with 1⅜″-18 thread. Specifications: Low-frequency cut-off, 150 cps; taper, 150 cps; air column length, 45″; sound distribution, 70° x 100°; mouth size, 10½″ x 20½″; depth (less driver), 21″; Net Wt. (less driver), 9½ lbs. Shpg. Wt., 12 lbs. List..**$39.00**

Model AR150—Reentrant Horn. Round concentrating horn for maximum penetration at lowest cost. E-V ring reflector plus precision new exponential design contributes to widest range yet achieved from this horn type. Smoother curve results in high intelligibility, and remarkably natural voice and music quality. Rubber edge-damping ring eliminates resonances. High-efficiency design allows more useful volume from driver over entire range. Accepts Electro-Voice Convertible drivers or any standard driver with 1⅜″-18 thread. Specifications: Low-frequency horn—cut-off, 150 cps; taper, 150 cps; air column length, 41″; sound distribution, 85°; diameter, 21″; depth (less driver), 17″. Net Weight (less driver), 6½ lbs. Shipping Weight, 8 lbs. List Price..**$34.00**

VERSATILE CONVERTIBLE DRIVERS

Now, for the first time, here are drivers that can be used interchangeably in compound or reentrant horns. Used on either type of horn, the new Electro-Voice Convertible Drivers feature highest efficiency available. Increased power handling plus extra increased efficiency make the 40 and 50-watt drivers uniquely useful where high power at minimum cost is essential. The high efficiency of all E-V Convertible Drivers is achieved without resorting to "peaked" response which may increase loudness, but does reduce intelligibility. The smooth response of these drivers insures most natural reproduction of voice and music for more satisfying quality with vastly reduced feedback problems and greatly increased tonal range. Double flux ceramic magnets provide long-lasting high efficiency in entirely new low-loss magnetic circuits. Edgewise-wound ribbon voice coils give 18% more energy.

The drivers are rugged and weatherproof; conversion to either reentrant or compound use can be made instantly in the field. Voice coils are also field replaceable, thus reducing repair costs to a minimum. E-V Convertible Drivers are available with 16 or 45-ohm voice coils or with built-in 70.7-volt line constant voltage transformers. This entirely new design concept gives better performance at minimum cost, making E-V Drivers your best buy.

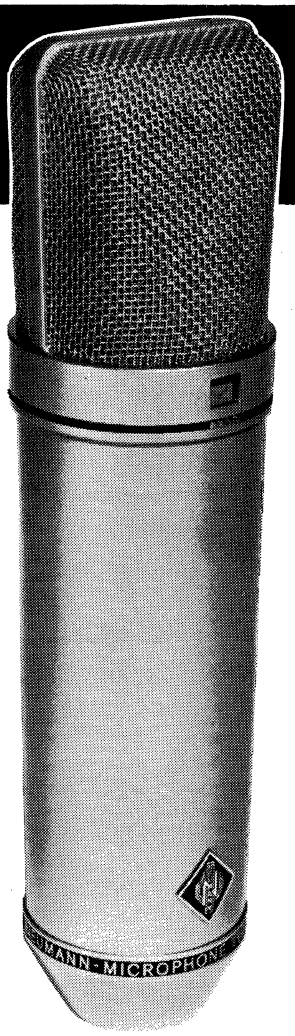
NEUMANN MICROPHONES



NEW! U-67 CONDENSER MICROPHONE

CULMINATION OF OVER 30 YEARS OF ELECTRONIC LEADERSHIP!

Contains the following advanced features:

1. Electronically switched directional characteristics: Cardioid, Omni-directional, Figure-8.
2. Frequency response with virtually no peak at the high end.
3. Separate "Voice-Music" switch raises the roll-off starting point from 40 cps to 100 cps.
4. Sensitivity switch on microphone prevents overload of amplifier from close placement to sound source.
5. "Calibrating input" permits direct testing of microphone preamplifier with oscillator.
6. Uses regular EF-86 tube, readily replaceable.

Complete system includes: Microphone, Power supply, Interconnect cable and stand mount.

NEUMANN M-49B CONTINUOUSLY ELECTRONICALLY VARIABLE DIRECTIONAL PATTERN MICROPHONE SYSTEM

This microphone permits remote control of the directional characteristic. A smooth, continuous fader-control selects any of the basic directional patterns (non-directional, bi-directional, and cardioid) and any intermediate pattern. Wide frequency response with extremely low distortion—0.6% 40-15 kc up to 110 db absolute.

Complete microphone system consists of microphone, power supply and MZ-49 Swivel mounting harness.

NEUMANN KM-54A/KM-53A

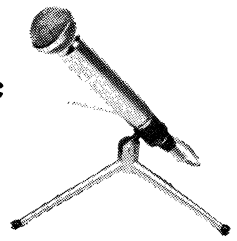
The KM-54a is a super cardioid miniature microphone that has been designed with tv and film in mind. This ⅞" diameter by 5" long, 3½ ounce marvel, when mounted in the Z-38 full elastic suspension, can be aimed at the sound and provide more than 25db rejection of extraneous sounds in the studio.

Complete microphone system consists of microphone, power supply, inter-connect cable full elastic suspension, connector.

NEUMANN KM-56 MINIATURE CONDENSER MICROPHONE SYSTEM

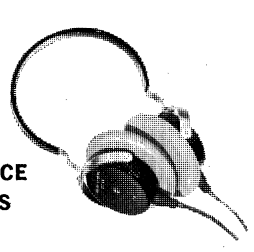
The KM-56 satisfies a great demand for a microphone of modern, miniature styling of unexcelled reliability and performance. It is a true self-contained condenser microphone incorporating electronic switching of the directional characteristic (U.S. Pat. No. 2.678,967) to all three patterns: omni-directional, bi-directional, and cardioid. It uses a pure nickel double diaphragm capsule offering high resistance to temperature and humidity effects.

Complete microphone system consists of microphone, power supply, interconnect cable, full elastic suspension, connector.



BEYER M-160 DYNAMIC RIBBON MICROPHONE (ULTRA-DIRECTIONAL)

An ultra-directional characteristic has now become possible in a ribbon microphone. The warm, transparent classical ribbon quality—in a miniaturized form, with response approaching near theoretical limits through miniaturization of the vibrating system. Close tolerances in manufacture assure uniformity of characteristic between microphones, permitting paired use for Stereo. Overall response: 20-20,000 cps. Impedance: 50/200 ohms. Dimensions: 1½" x 6". Weight: 6 ozs.



BEYER DT-48 DYNAMIC PEAK-PERFORMANCE HEADPHONES

A hand-built, high-fidelity transducer used in critical evaluation of recorded and transmitted sound, yet in a reasonable price class. Frequency range: 30-15.000 cycles, down no more than 7 db at 15 kc, and perfectly flat at 30 cycles. Comfortable exchangeable foam rubber pads and separate cords for each ear for stereo application. Impedance: 5 ohms each side; input voltage required: 0.1 volt; peak power demand: 0.4 watt; weight 12½ ozs.

COMPLETE TECHNICAL SPECIFICATIONS WILL BE PROMPTLY FURNISHED UPON PROFESSIONAL REQUEST.

JENSEN HYPEX* PROJECTOR HORNS

These projector horns are acoustically coordinated in design for best performance with Hypex* Driver Units D-30, D-40 and DD-100, any one of which may be used on any of the horns. The horn expansion formula is the hyperbolic exponential (U. S. Patent 2,338,262) providing low frequency reproduction superior to that obtained with conventional horns of the same mouth size. Horns (with the exception of RT-20) are spun aluminum with weather-resistant bake d tan enamel finish. Horns are threaded 1⅝"-18 and may be used with any driver units with this thr ad. Sturdy steel mounting "U" brackets allow horn to point in any desired direction; horn locks in desired position by means of new positive action trunnion clutches.

(See separate description and specifications on RT-20 Rectangular Horn).

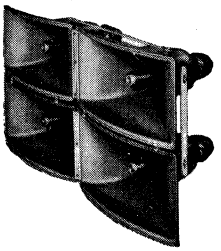
MODEL RT-20 RECTANGULAR HORN

These versatile horns may be used in a variety of ways to provide projector systems of almost any desired directional characteristics and total power rating. They may be used singly just as round horns are used and in such cases, the rectangular shape is frequently an advantage in appearance, minimizing obstruction to vision, and facilitating mounting.

RT-20 Horns are designed so that they may be stacked in plane or circular arrays. Eight units, each with a geometric sector angle of 45 degrees, form a complete circle with a diameter of 5' 9½", giving 360° horizontal coverage. Fewer units are used where less than 360° coverage is required as indicated below:

Number of Units	Horizontal Coverage Angle
1	80°
2	125°
3	170°
4	215°
5	260°
6	305°
8	360°



Horns may be "double decked," which will concentrate the sound in a narrower angle in the vertical plane. A stack two units high will give a vertical coverage angle of approximately 30 degrees; at the same time, there is a gain in sound pressure on the axis of 2.5 db, due to the restricted angle of radiation.

The horn is molded of high impact strength glass fibre reinforced polyester. Natural molded finish in Modern Tan color.

HYPEX* LIFETIME DRIVER UNITS

Jensen Hypex* Lifetime Driver Units have many outstanding features which contribute to increased performance and reliability. Frequency range is based on achieving substantially higher conversion efficiency, higher power ratings and improved reliability over comparable units previously available, while affording good fidelity in the reproduction of speech and music. Lower cutoff frequency is somewhat below those of the horns with which they will be used; the specifications show the maximum upper limiting frequencies, but response has been shaped to give emphasis to the 3-5 kc region, which is extremely important in high efficiency sound projection. As a result of these design choices and special research on ruggedization, the D-30 can be rated at 30 watts speech and music, D-40 at 40 watts, and a **Lifetime Guarantee extended against failure under normal conditions of use!**

The DD-100 100-watt Superpower Driver Unit, similarly guaranteed, is the first double acting integrated sound chamber driver unit ever to be offered; it is also the first 100 watt unit available, achieving a higher power input rating to a single projector or an array, than has ever been possible before.

Magnetic structures are the most efficient that research has been able to develop, yielding the highest magnetic energy from the generous sized Alnico V magnets which scientific proportioning of magnet material and soft iron structure can provide. Specially shaped reinforced plastic diaphragms combine ruggedness with excellent acoustic properties and freedom from "breakup". Voice Coils are varnish wound, baked and aged on treated, heat and moisture resistant bobbins, resulting in a rigid assembly that is indestructible in normal service. Beryllium copper leads are indefinitely fatigue-resistant. Models D-40 and DD-100 have precision self-centering moving system assemblies which are added insurance for dependability under severe operating conditions. External leads connect to heavy binder screw terminals; added reliability for wiring is provided by strain reliefs on all units. All units are threaded 1⅛"-18.

JENSEN COMPLETE HYPEX* PROJECTORS

HF-100A WEATHERPROOF TWO-WAY HIGH FIDELITY PROJECTOR

Here is a real high fidelity projector for use indoors or out, under all weather conditions. Consists of a heavy duty 8" "woofer" feeding a folded horn plus a horn-loaded compression driver "tweeter". Low frequency unit feeds horn by a combination of direct radiation and phase-inversion bass reflex ports for superior efficiency in the low frequency region. The high frequency horn has a 90° fold and is mounted so that the driver unit is at the top, thus providing self-draining and making it impossible for rain, sleet or snow to reach the driver unit.

Horn outer section is spun aluminum with baked enamel finish. Central enclosure is glass fibre reinforced polyester in matching natural molded Modern Tan finish. Sturdy "U" mounting bracket is fully adjustable and positive locking.

Jensen VH-91A and VR-11 Hypex* projectors are the most compact in the line and their use is indicated where speech reproduction is the only important consideration and where size or cost are controlling factors. Designed for maximum efficiency in the upper frequency range, these units provide excellent penetration of noise. Small in size, they can also be located near areas of extreme noise. Magnetic structures are highly efficient, using Alnico V magnets in ample soft iron structures. Corrosion-resisting finishes and materials such as plastic cloth base diaphragms insure long life under outdoor and industrial atmospheric conditions. For further protection driver units are completely enclosed inside the rigid outer shell.

MODEL VH-91A HYPEX* PROJECTOR

Equipped with new universal mounting bracket for adjustment in any direction and secure locking with a single wing nut. Extremely rigid vibration-proof clamping allows three hole flange mounting on flat surface, single hole mounting with ¼" lag or machine screw through center, or mounting on top of standard ½" pipe

MODEL VR-11 HYPEX* RADIAL PROJECTOR

For application requiring 360° coverage in horizontal plane, such as low ceiling industrial areas. Equipped with sturdy eye-bolt for clamping or suspension from above.

BV-1 BLAST VALVE

The BV-1 Blast Valve is an accessory device for protecting the driver unit from high pressures due to explosive forces. Valve is the same as used in Jensen military blastproof loudspeakers. Under the positive blast pressure phase, the valve moves inward to seal off the driver unit from the horn throat. On the negative phase the valve moves outward, again effecting a seal. With the valve in neutral position, attenuation of sound is negligible. Screws between horn and driver unit. Overall diameter 3". Fits all Jensen driver units and horns.

EXTENDED RANGE HIGH FIDELITY LOUDSPEAKERS

Here is a complete line of loudspeakers of latest designs especially for commercial and general purpose applications, all field tested for the exacting and rigorous requirements of professional service. There is a loudspeaker for every need—ruggedly dependable units which have enjoyed the position of "world's quality standard" for many years in the professional field.

These heavy duty loudspeakers are of the extended range high fidelity type with performance suitable for applications where two-way and three-way speakers are not needed. High efficiency is assured with carefully designed magnetic structures using Alnico 5 magnets and ample soft iron circuits. Moisture-resistant cones and other materials contribute to long life expectancy. The units are especially suitable for protected outdoor locations not directly exposed to rain, sleet and snow, as well as for indoor use.

Extended h-f range insures excellent music reproduction. The l-f range will depend on the enclosure size and design. Commonly used in small enclosures or ceiling baffles. Models P8-SC and P12-SC are practically standard in the industry for interior low level music distribution systems.

Sizes from 4″ to 12″ offer the best performance possible in each size and cost class. Choices as to efficiency and power ratings are available in some sizes. Relative loudness efficiency is shown in the table referred to the P4-VC. A speaker with relative loudness efficiency of +3 db will be noticeably louder than the P4-VC for the same power; only one-half the power will be required to be equally as loud as the P4-VC.

GENERAL DESCRIPTION

The Karlson enclosures are designed and perfected to meet the requirements for the latest and most advanced stereosonic techniques. They provide highly effective acoustic transformers improving the bass, transient response, dispersion, dynamic range, and definition far beyond the ordinary capacities of your speaker. They have consistently outclassed all other approaches in their ability to satisfy the most discriminating. As a result they are without a doubt the most highly recommended loudspeaker enclosures available at any price. Unexcelled for stereo use. Will outperform systems many times their size.

RELATIVE SIZES AND APPLICATIONS

KARLSON '15'—Enclosures for 15" Speakers

33" high, 22½" wide, 18" deep, wt. 80 lbs.
This is the outstanding choice of the real experts. Better bass than even a horn 30 feet long with a 12½ foot mouth diameter—PLUS—unexcelled tonal definition and wide area presentation makes this the finest enclosure available at any price. Use for finest home and professional stereo and monophonic high fidelity systems. Excellent for electronic organs, musical instruments, theatres, studio monitors, music festivals and wherever the very best is required.

KARLSON '12'—Enclosures for 12" Speakers

24¾" high, 16¾" wide, 13¾" deep, wt. 44 lbs.
This enclosure is ideal for those who want the biggest and best stereo sound available in a compact system. Its dynamic range in bass is only slightly less than the Karlson '15' and certainly much greater than mammoth systems costing many times more. Very efficient, doesn't need super power amplifiers for good bass. Suitable for almost all types of installation, including built-ins due to their small size.

KARLSON '8'—Enclosures for 8" Speakers

17¼", wide 11¾", high 10" deep, wt. 14 lbs.
These very small enclosures will actually fit in the average bookshelf, and will give a quality of reproduction and extended bass totally beyond the normal capabilities of a one cubic foot enclosure. Especially good for the small apartment, den or playroom or as an addition to your larger system. May be built into other cabinetry or used as a portable system as well. Provides professional quality at competitive prices.

SPECIFICATIONS AND FEATURES

All Karlson enclosures employ the basically new Karlson acoustic transducer (Pat. nos. 2,816,619 and 2,896,736) for greatly extended bass, ultra-uniform wide angle dispersion for all speakers in excess of 120°, and highly improved transient response, efficiency, dynamic range and signal definition. Cone break up and distortion is practically eliminated. Amplifier loading is resistive giving excellent control. Dynamic range in bass varies with size, with the larger units quite capable of filling the largest auditoriums with sound. High frequency response only limited by tweeter used. No tuning required with any speaker.

All enclosures may be mounted either vertically or on side with suitable loose footing provided for the Karlson '15' and '12' enclosures.

SELECTING A SPEAKER

The Karlson enclosures are designed for use with the finest extended range, coaxial, and triaxial speakers. Works best with high compliance speakers having a good linear suspension, strong magnets and smooth very extended tweeters. Separate tweeters may be mounted in the larger enclosures. Mechanical resonance not critical, no tuning is required.

Top quality, heavy gauge satin finished spun aluminum. Assures controlled 360° diffusion of undistorted "ear-level" sound with minimum of echo and feedback. Conical diffuser "floats" on soft rubber grommets forming a press fit to aluminum support studs which thread to speaker housing ring. Clear lacquer coating also serves as prime coat for on-the-job painting. Wide choice of colored lacquer finishes available on request. Shipped complete with hardware for mounting to Lowell Protective Speaker Enclosures illustrated.

360° Coverage Low "Ear-Level" Sound

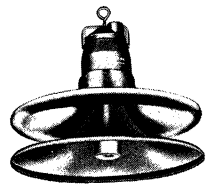
Medium power speaker, (10 watts continuous duty), for paging and public address speech reproduction. High conversation efficiency. See fig. 2 p. 2 for frequency response curve.

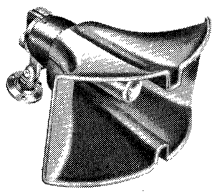
RL-10T

Same as RL-10 but with unique and exclusive built-in multi-match transformer Model TA-20 for use on 70 volt, 25 volt or constant-impedance line. See description of TA-20 transformer for impedance taps and fig. 2 p. 2 for frequency response curve.



RL-10R

A true 360° radiation pattern. Excellent for indoor installations. An extremely economical solution to the wide-coverage low-power problem of speech reproduction. See fig. 2 p. 2 for frequency response curve and fig. 3 p. 2 for radiation pattern.



CRL-10

Racon's exclusive (pat. pend.) Cobra-Flare® wide angle design. Dual air column and twin horn design narrow the vertical beam and disperse the sound energy over a wide horizontal area. Medium power, for speech reproduction. See fig. 2 p. 2 for frequency response curve and fig. 4 p. 2 for radiation pattern.

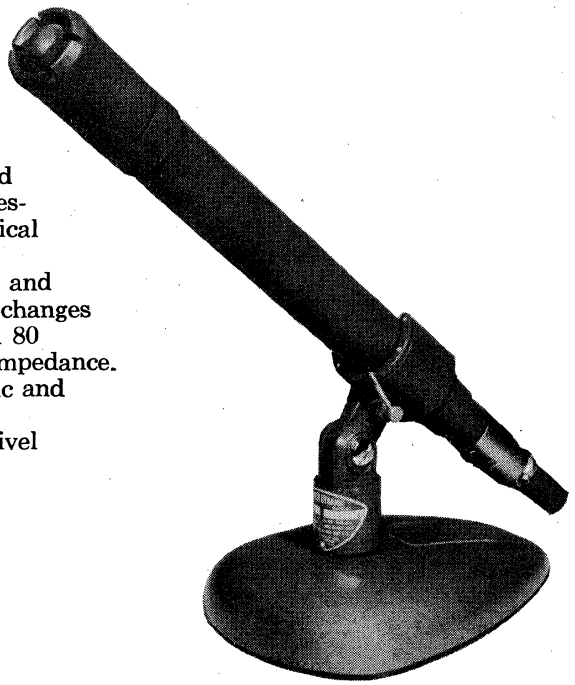
TURNER BROADCAST AND PROFESSIONAL RECORDING MICROPHONES



THE AMAZING NEW TURNER 401

The incomparable appearance of this treated aluminum microphone makes it a proud possession, no matter the application. And its technical excellence makes it ideal for professional applications. It features adjustable response and impedance. A simple screwdriver adjustment changes the basic response — 40-20,000 cps — to an 80 or 160 cps cutoff and regulates the 150 or Hi impedance. It is a pressure operated moving coil dynamic and essentially non-directional. The 401 can be mounted on 5/8"-27 desk or floor stand for swivel operation. The microphone moves smoothly through 180° and a positive grip cam-lock allows instant removal or insertion of the microphone without disconnecting.
Net Price, $75.00.

WHERE MOBILITY IS NEEDED YOU'LL FIND THE TURNER 58 LAVALIER

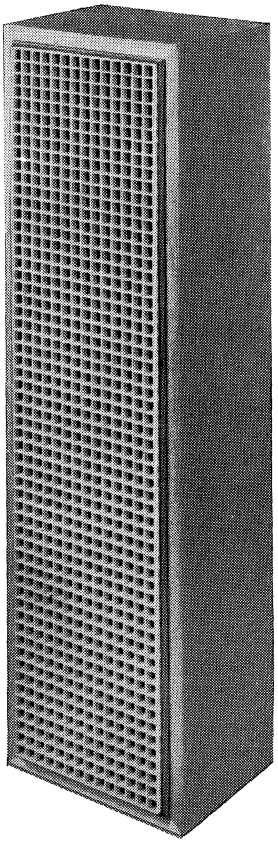
UNILINE

sound column public address speaker systems



Uniline multiple-speaker sound columns offer the user many advantages. EXTRA POWER: featuring full-range high-power-handling speakers: Only the Unilines can handle power up to 150 watts! PERFECT DISPERSION: with their broad dispersion in the horizontal plane and narrow vertical dispersion, they place the sound exactly where needed—at the listeners, *not* at the ceiling and floor—thereby virtually eliminating reverberation and feedback. UNIFORM SOUND LEVEL: from front to rear, loudness is equal for everyone in the auditorium—the Uniline's "long throw" will not blast even those sitting nearest to it. In addition, their low distortion improves intelligibility and greatly increases listener comfort. Bass response is excellent (down to 35 cps) and over-all performance is "live," smooth and extremely well balanced. And by virtue of its design, the Uniline lends itself to simple, unobtrusive installations.

CLASSIC MARK II

15" high compliance 3-way speaker system

Here's the natural bridge between the massive cabinetry of the past and the compacts of the present. Not since the Classic I has a speaker system been engineered with such impressive components. A heavy duty 15" high compliance woofer with exceptionally rigid diaphragm and extremely compliant soft surround . . . delivering optimum bass response undistorted to below 20 cps. A specially designed high compliance 8" mid-range, crossing over at 150 cps, with virtually linear response to 3000 cps. This speaker features a completely enclosed basket for protection against woofer radiation and a viscous treated cone to roll off unwanted highs and peaks. And the Sphericon super tweeter, widely acknowledged as the world's finest, extends the system's amazingly smooth response to 22,000 cps . . . with extremely wide and uniform dispersion (120° in all planes). All this housed in elegant cabinetry that will enhance the most tastefully appointed home. Dimensions: 35" W., 28¼" H., 17½" D. $295.00 user net.

MODEL C-8M

8" mid-range speaker

Here's a *true* mid-range specialist, with response precisely limited to the important "presence" frequencies of 700 to 5,000 cps. The cone of the C8M has been viscous-treated at the center to roll off unwanted highs and to prevent unnatural tones and harsh peaks. Thus, its upper frequency response is tailored to match such high quality tweeters as the Sphericon. Further, its basket is completely enclosed to protect it from woofer-generated pressures inside the cabinet, eliminating the need for complicated sub-enclosures. UNIVERSITY †MODULAR MICROPHONES† *for the professional*

WORLD'S ONLY MICROPHONES WITH MODULAR FLEXIBILITY!*

University's professional microphones bring new dimensions in quality and utility for hypercritical applications requiring the ultimate in full-range pick-up. The omni-directional models open new frontiers in over-all uniformity of response and in extension of the bass range. The cardioid models span the complete frequency range, free of peaks and with consistently high front-to-back discrimination. The lavalier models have low frequency characteristics tailored for the most natural response under their special conditions of use. For TV, FM and high fidelity AM—from church to night club—from school to industrial PA—they may well change your way of thinking about the selection, installation and use of high quality professional microphones.

Note these dynamic performance features

- 100% ruggedized dynamic transducer cartridge—with the exclusive "Unilar" diaphragm. Press the diaphragm with your finger, then release it, and watch it spring back to its original shape. And it has amazing immunity to temperature extremes, humidity and corrosive elements.
- Instant impedance change—no tools, rewiring, or soldering. Simply push-on the adaptor connectors to the microphone case pins with the desired impedance. (All connectors and pins are gold-plated for perfect electrical contact.)
- Exceptionally wide frequency response, virtually free of distortion. Undiminished at the high end in some models at 15,000 cps and effective to beyond 20,000 cps. At the low end, uniform to below 35 cps and usable even to the 20 cps region.

*FOR THE FIRST TIME EVER, you can obtain the exact microphone you want without compromising quality to meet a price, without paying for features you don't need. Any of the basic microphone modules (A-D) can be used with any of the interchangeable adapters (E-H) to perform the functions of several conventional microphones. For example, with or without switches, for cables with and without cannon plugs, for screw-on or slide-on stands. This gives long-term savings as well as unmatched versatility, for it permits adding suitable adapters as requirements change—without buying additional microphones or compromising quality to meet a price.

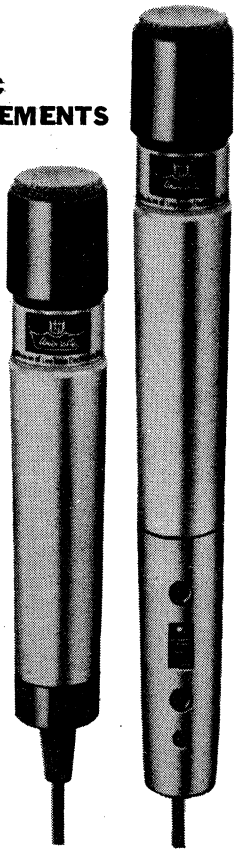
. . . AND FOR DYNAMIC COMMERCIAL REQUIREMENTS



MODELS 70 and 71†
Omni-Directional Dynamic
These models fulfill all the strenuous and exacting requirements for general purpose, low cost dynamic microphones. Their rugged construction and exceptionally wide frequency response make them ideal for general sound casting applications in churches, schools, industrial and commercial public address installations—improving home tape recordings and upgrading ham broadcasting rigs. And, in the general purpose field, they offer performance, durability and flexibility that set an entirely new standard of quality per dollar. Low frequency response is excellent—approaching that of University professional models, and substantially exceeding that of other omni-directional dynamic microphones in their price range: the high range extends to a usable limit in the 18,000 cycle region. Resultant treble and high frequency characteristic is clear and free from harshness or stridency.

†Includes on-off slide switch.

CUSTOM MADE AND SPECIAL DESIGN STYLI AVAILABLE (MRS, ANM and FEATHER EDGE)

Eccentric styli, Advance balls, Shaving knives, Wax points, Embossing styli, Replaceable Sapphire reproducing needles, Cartridge assemblies with Sapphire points.

CAPPS RESHARPENING SERVICE

Most CAPPS MADE styli can be resharpened upwards of five times depending on whether they are simply dull or badly chipped (Thermo styli cannot be resharpened this many times because of the wiring which limits the available area of sapphire.) CAPPS "RESHARPS" are given the same exacting care and attention as CAPPS new styli and are returned to the sender promptly.

HOT STYLUS UNIT

The CAPPS HOT STYLUS UNIT is used for applying heat to disk recording styli, softening the disk material at the point of contact thereby producing smoother more accurate grooves. This results in a substantial reduction in surface noise, especially at the inner diameter and minimizes the mechanical load on the cutting head increasing its efficiency and frequency response.

When ordering specify make and model number of cutter head and stylus requirements.

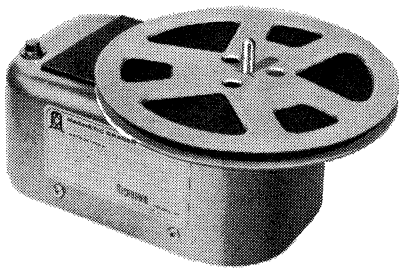
Tape Head Demagnetizer — Model HD-40M

FOR TAPE RECORDING HEADS

Permanent magnetizing of recording heads during normal use of tape recorders is a common occurrence. Magnetized heads cause high noise level and harmonic distortion.

The HD-40M Head Demagnetizer, when properly used, removes any residual permanent magnetism from the heads. It consists of a heavy duty alternating current electromagnet with an extended pole piece designed for easy access to the recording heads of most tape recorders. When energized, contact of the demagnetizer pole piece with the pole tip of the recording head causes the head to be saturated by an alternating magnetic field. Gradual removal of the head from this saturating field neutralized any residual permanent (DC) magnetism in the recording head.

- Removes permanent magnetism
- Reduces noise level
- Reduces harmonic distortion
- Improves signal to noise ratio
- Insures high frequency response
- Reduces hum of tape head
- Special finish on pole piece prevents marring recording head surfaces
- Rating 117 volts AC, 1 AMP.
- FINISH: High impact molded epoxy
- SIZE: 4" Long x 1¼" Diameter
- WEIGHT: 7 ozs.
- USER NET: $5.25



Magnetic Tape Eraser — Model HD-11

STANTON 381 SERIES

The 381 Series Stereo Fluxvalve is more than a pickup. Originally, it was developed for the recording industry as a laboratory standard to enable recording engineers to make highly accurate and reliable measurements in order to precisely calibrate recording channels. In short, the 381 is a measuring instrument for precision playback applications universally used by the leading record manufacturers for quality control and A & R evaluation.

In 1961, Pickering & Co., Inc. incorporated this very same professional instrument in a new high quality line known as the "Calibration Standard Series" making the ultimate in pickups available to the professional music critic and the discriminating audiophile as well.

The Model 381E is a complete reproducer which affords the user the facility to play every type of record manufactured. It is supplied with three interchangeable V-GUARD stylus assemblies: 0.7 mil for stereo— 1 mil for monophonic microgroove—2.7 mil for 78's and transcriptions. In addition, V-GUARD stylus assemblies of various radii may be obtained on special order from our Custom Engineering Department.

Each Model 381 "Calibration Standard" pickup is individually calibrated in the laboratory by qualified personnel prior to shipment . . . assuring the highest quality record reproduction possible.

381 SERIES SPECIFICATIONS: Response ± 1 db from 20-10,000 cycles; ± 2 db from 20-17,000 cycles—Output 1 mv per cm. of recorded level—Channel Separation 35 db—Tracking Force 2-5 grams—Weight 14 grams.

S914

625 LONG PLAY TAPE REPRODUCER

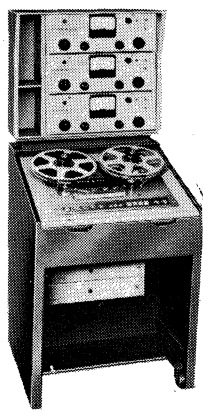
The Presto Model 625 tape transport mechanism is a professional quality reproducer designed specifically for use in highest quality background music systems and automated programming systems. . . . Features: • 4 to 8 hour continuous Tape Reproduction (4 hours with full track). • Monophonic or stereophonic operation. • Separate mono half-track or stereo ¼ track playback, heads readily accessible for adjustment. (Full track head for 1 direction available). • 3¾ and 7½ inch per second tape speeds. • Dual-track-bidirectional tape motion. • Fast Forward and Fast Rewind; memory direction operation. • Complete, separate direct-drive 2 speed - 2 direction hysteresis synchronous capstan motor and torque-type supply and take-up motors for optimum tape handling and easy servicing; no clutches to adjust. • Solenoid controlled brakes and capstan pressure pulley to provide instant action, precision pressure, ease of adjustment and protection. • Unique self-locking combination reel retainer-knobs. • Can be mounted vertically or horizontally. Custom cabinet or rack mounted available. • Unitized construction for easy service.

A915 PRE-AMPLIFIER

The Presto model A915 is a professional quality pre-amplifier designed expressly for use with Presto model 625 Tape Reproducer in background music or broadcast automatic programming systems. The A915 includes a two-channel pre-amplifier which is automatically switched to either upper or lower track playback heads, a line amplifier and provisions for accepting either the model SS2 Silence Sensing or model SK25 Tone Sensing Adapter.

The pre-amplifier contains equalization for any high impedance playback head corresponding to the NAB playback curve. In addition, each input may be adjusted, over a limited range, to compensate for frequency response differences between heads.

The output of the A915 is 600 ohm output for feeding a standard telephone line. Provisions are incorporated for connection of an external program clock or other similar timing device.



850

SS-2 AND SK-25 SENSING UNITS

The models SS-2 and SK-25 are Sensing Adapter Units which plug into the A-915 pre-amplifier. The model SS-2 senses silence periods on the tape. It can be set to release a control relay after silence periods of from 2 to 35 seconds (time at discretion of user). It can be used to control one or more transports to provide either "on" or "off" operation.

The model SK-25 senses a 25 cycle tone burst which has been prerecorded on the tape. The adapter activates a control relay to provide either "on" or "off" operation for one or more transports. The drop-out time of the relay (after the 25 cycle tone has ceased) is adjustable over a range of from 2 to 35 seconds. The SK-25 employs unique circuitry to provide precise selection of the 25 cycle tone, for sensing, while rejecting all other tones.

SERIES 800—PROFESSIONAL TAPE RECORDERS

A bold new design concept in tape recorders that retains the traditional high quality of Presto equipment and adds to it a versatility that results in greater efficiency and economy than has ever before been available.

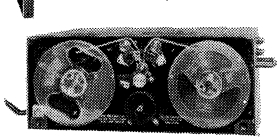
All series 800 recorders accept standard tape reels and core winds up to 10½", and operate at 7½ and 15 ips or 3¾ and 7½ ips. Speed accuracy is ±3 seconds/30 minutes. Flutter: less than 0.07% at 15 ips, and less than 0.15% at 7½ ips. The A908 amplifier has less than 1% total harmonic distortion at + 20 dbm, fom 25 to 20,000 cps.

Model 800 is a basic, high quality, ¼" monophonic recorder which can be easily converted to stereo in a matter of minutes by simply replacing the head assembly and adding another A908 amplifier.

Model 825 is a ¼" recorder which is quickly and readily convertible to accept ½" tapes by merely interchanging the recording heads and adding another A908 amplifier.

Model 850 is a full convertible recorder. It is equipped with 3 stacked A908 amplifiers and can be changed from ½" to ¼" operation (or vice versa) in a matter of a few minutes. Only a screwdriver is required to change the head assemblies.

All series 800 Recorders are available in portable cases as well as in consoles.



MPB601

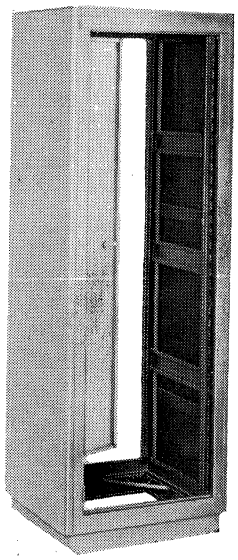
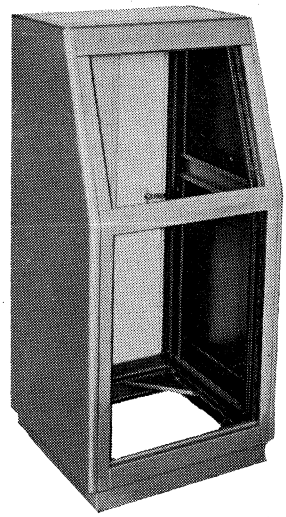
SERIES SIXTY CABINET RACKS



Upright Model



Sloping Panel Model

The basic frame is welded into a solid unit composed of 14 gauge cold rolled steel channels. The sides have "U" braces with perforated channels to which vertical adjustable mounting rails are fastened. In addition to a normal panel mounting, these rails are designed to support other types of equipment such as brackets. shelves, slides, etc. This eliminates any necessity of drilling holes in the sides of the cabinet rack or destroying the fine symmetry of appearance.

The sides and rear door are made of 16 gauge steel. The door may be mounted to open from the left or from the right. A six inch wide vertical channel is welded to the door as a strengthening device preventing excessive vibration or whip.

The UPRIGHT RACKS have two pair of panel mounting rails that are fully adjustabe. The INCLINED PANEL RACKS have three sets of panel mounting rails that are likewise fully adjustable. Panels may be mounted in the front and the rear at the same time. The front rails are drilled and tapped 10-32 W.E. spacing while the rear rails are drilled adhering to universal spacing.

All Series Sixty enclosures may be quickly combined with each other to create units of any desired width as shown in our Add-A-Rack series. In addition, such accessories as desk tops, turrets, drawers, slides, sloping panel supports, and front door may be easily installed. See them in the Bud catalog.

WE CANNOT TOO GREATLY EMPHASIZE THE FACT THAT THE FURNISHING OF THESE ENCLOSURES COMPLETELY ASSEMBLED AND READY FOR USE ELIMINATES ALL CHANCES OF ERROR IN ORDERING OF MULTIPLE COMPONENTS AND THE TIME AND COST OF COMPLETING THE ASSEMBLY.

The standard finishes are smooth baked enamel over a prime finish, a choice of two tone grey or two tone blue is available. Please designate by the suffix "SG" if grey is required, or "SB" if blue is required.

Standard Bud relay rack panels are available for the Series Sixty racks in light grey and light blue. When ordering panels please add suffix "SG" for grey and "SB" for blue. See Bud page 4.

Upright models are regularly furnished with plain sides, plain rear door and solid top. Accessories such as plain or louvred doors, plain or louvred sides and perforated top are available. See Bud Catalog.

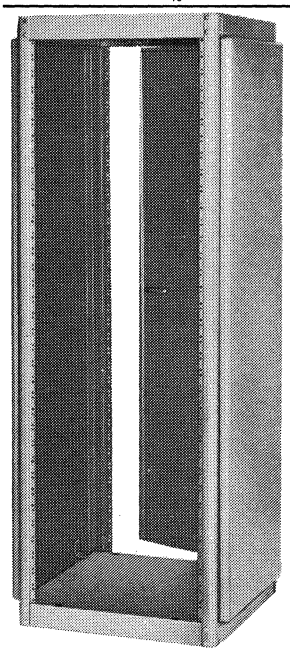
PRESTIGE RELAY RACKS



WITH ADJUSTABLE PANEL MOUNTING RAILS WHICH CAN BE MOVED FROM FRONT TO BACK IN ONE INCH INCREMENTS.

A standard Prestige Relay Rack consists of the framework, top, bottom, two ball cornered sides and a ball cornered door. Shipped knocked-down with necessary assembly hardware.

Interior servicing is easily accomplished without tearing down rack since sides are attached to frame by means of tongue and slot arrangement at bottom and two screws at top, thus sides are quickly removed.

Drilled and tapped panel mounting rails on all four vertical members of the frame. Standard 19" panels can, if desired, be mounted on all four sides of the rack.

Doors may be mounted to open either from left or right side. Extra doors may be purchased so that doors may be placed on any of four sides.

Panel rails will support 200 lbs. suspended between rails at any vertical position. Bottom will support 500 lbs.

The base is slotted to accept ball cornered side panels on any of the four sides of the rack.

Clearance of ball cornered door and side panels is sufficient to permit their installation over panels without damage to knobs or instrument controls.

Casters may be attached to base to achieve mobility if desired. Base is so designed that casters are recessed.

Knockout holes are provided in the sides of the rack so that two or more may be joined together in series.

Racks will accommodate Bud SD-1717 Sliding Drawer Assembly, Bud Console Drawer CD-2210 or "Prestige" Supporting Angles.

Finished in grey hammertone.

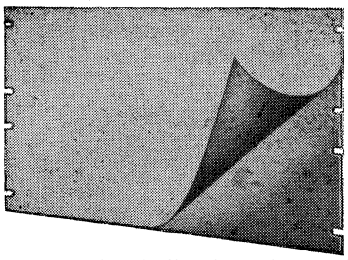
"Surface Shield" Aluminum Panels



Now . . . naturally bright aluminum panels with blemish-free mill finish.

Each panel is covered on both sides with sturdy self-stick paper to protect against damage. The paper provides an excellent surface for indicating size and position of drilling or milling. These operations may then be done while the paper is still in place thus minimizing the possibility of surface damage and elimination or surface soil. Paper is not removed until the panel is ready for installation.

Panels available in both 1/8" and 3/16" thicknesses, have standard notching and are 19" wide. Individually wrapped in heavy Kraft-backed cellulose wadding for protection in shipment or storage.

L M B PRESENTS SOMETHING NEW IN CHASSIS —

THE CHASSIS WITH THE CAP COVER AS ORIGINATED BY LMB

Built with the new original LMB popular cap cover construction. This construction enables the builder to use either the top or the bottom of the chassis for construction. The Chassis can also be mounted on its side and construction can be on both top and bottom at the same time. Sturdily built from Aircraft quality aluminum, Type 3003, H-14, the same material as is used in the construction of all LMB precision box chassis. Special technique in welding the corners makes for a stronger chassis than the orthodox type. Cap construction allows for using all the space inside the chassis without being hindered by the mounting flange, which takes from 10% to 20% of the mounting space out of the average chassis.

The P Series are perforated on all four sides and are ideal where heat dissipation is a factor. LMB chassis — the better chassis, with the year's ahead advanced construction for your better project application. An advanced quality product competitively priced.

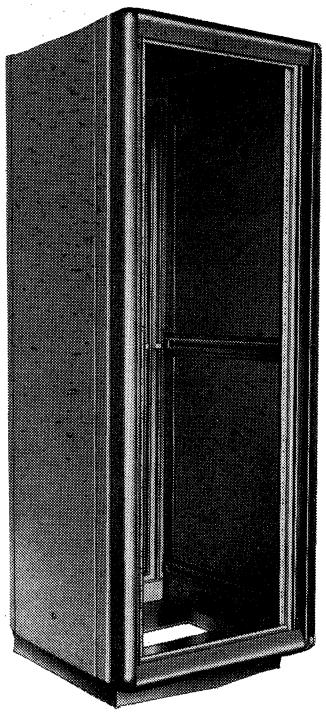
PAR-METAL UNIVERSAL CABINET RACKS



SERIES "PL" as above
SERIES "FL" has front
as well as rear doors
DeLuxe Series Racks with
Detachable Side Panels

GENERAL DESCRIPTION

Par-Metal Universal Cabinet Racks are now available in three series of models to solve your most difficult housing problems. Our deluxe series "PL" and "FL" brings you a new trend in cabinet design.

Although smartly styled, there has been no sacrifice in the rugged construction which features all universal type racks. The same sturdy frame which is used in our "PR" series provides a solid foundation for maximum loading under severe conditions. Series "PL" may be combined with our console units listed on Par-Metal Pages 10 to 15 to solve your equipment housing problems. Several typical examples are shown on Par-Metal Page 11.

Except where needed for purposes of adjustment or accessibility, all Universal Cabinet Racks are securely welded into an integral unit. No metal screws, clips, or similar devices are used. Every care has been taken to facilitate your assembly problems with a minimum of parts, an efficient utilization of space, and rapid accessibility to interior components.

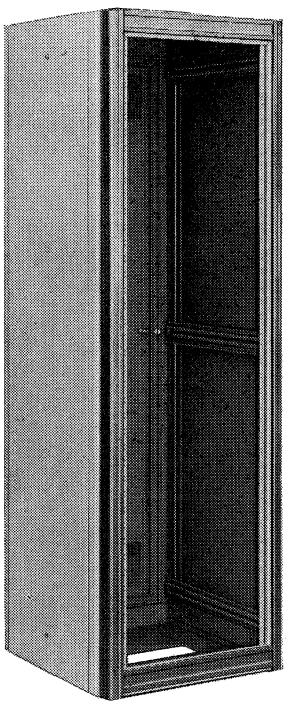
RECESSED BASES (shown on illustration at left) are available for all universal type racks, and are purchased separately as an optional accessory.

MODULAR GROUPS: All universal type racks (in each series) may be joined into modular groups; cabinets of the same height, in varying panel widths, **with and without front doors,** may be intermixed.

DIMENSIONS: Racks are available for 19", 24", or 30" wide panels. Cabinet heights are 48⅛", 67⅜", 77⅛" and 83⅛"; depths available are 18" or 24".

DESIGN: All sizes listed may be obtained with conventional solid side walls, or with open side walls and detachable side panels. Side shields for use between racks are also available.

MID-RAIL MOUNTING OF PANELS: The panel mounting angles or "strips" are fully adjustable on all racks, and may be positioned at any location from front to back. Addditional panel mounting angles may be easily inserted where needed for mounting terminal boards, etc.



SERIES "PR" as above
SERIES "FR" has front
as well as rear doors
Standard Series Racks with
Detachable Side Panels

VERTICAL SIDE SUPPORTS: These supports provide a simple method for supporting chassis and other equipment in the racks. The means of attaching such brackets is fully adjustable so that chassis may be accurately lined up with the front panels. No drilling or other fabrication is required. The chassis may then be installed or removed with a minimum of effort. The vertical side supports also facilitate the installation of special sliding devices obtainable from slide manufacturers.

ADJUSTABLE FLOOR LEVELLERS are supplied with all racks as standard.

SLIDING SHELVES AND DRAWERS: Several models are listed on Par-Metal Page 9. These are constructed for mounting on the front of the racks the same as regular panels.

SLOPING INSTRUMENT PANELS and EXTENSION DESK TABLES for single and modular assemblies are available for all universal racks, as listed on Par-Metal Page 8.

MODIFICATIONS: Without departing from the basic design of our universal cabinet racks, it is possible to modify them to meet your special requirements. Standard ventilated tops are available. They may also be modified with our standard dies for making openings, louvers, circular holes, etc., in sides, tops, bottoms and doors of racks. For additional information write for our complete Catalog 61.

All of our products incorporate the same exacting standards of quality and uniformity which we have maintained for over three decades. If you have a specific problem, do not hesitate to consult us. **Personalized and interested engineering assistance is always available.**

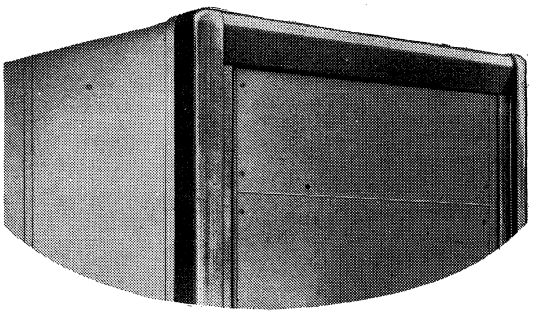
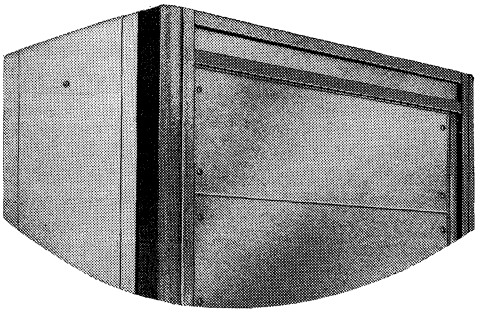
PAR-METAL UNIVERSAL CABINET RACKS

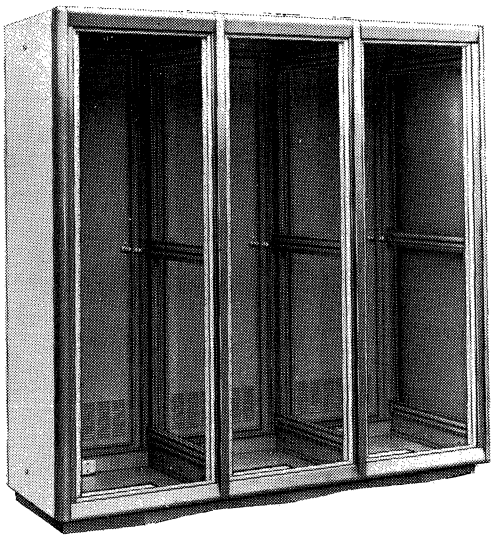
Below are close-up views of the new styling used on our universal cabinet racks. Illustrations of typical assemblies of these racks are shown with additional accessories now available. All racks and accessories may be obtained for 19″, 24″, and 30″ wide panels. On Par-Metal Page 11, you will find additional photographs showing how our "PL" series DeLuxe racks may be combined with console units in modular groups.



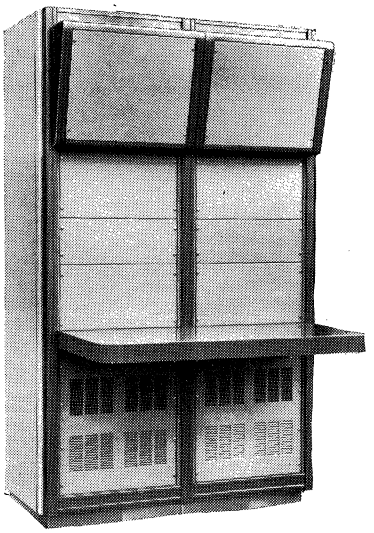
A new concept in modern styling features our series "FL" and "PL" cabinet racks listed on Par-Metal Page 5.



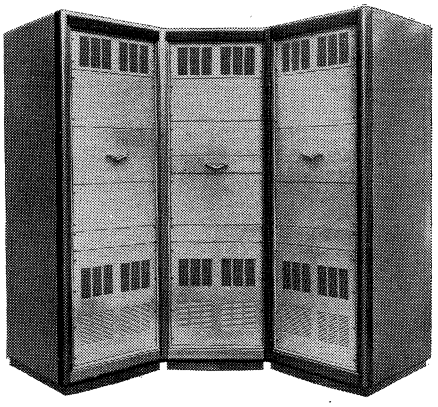
To provide a fresh, compact appearance to our Series PR, FR, PX, and FX Racks, the front of the rack is completely framed as illustrated above.



Illustrated above is a modular group of three No. PL-7724-A Racks with sub-bases. They are available in various heights for panels 19″, 24″, and 30″ wide.

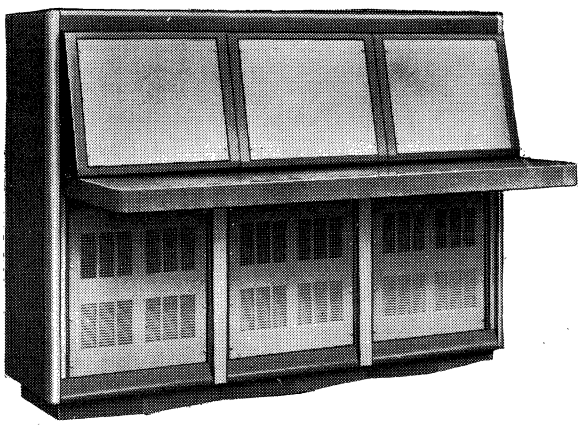


The duplex unit shown above has two No. PR-8424-A racks, a pair of No. RS-824-A detachable side panels, two sloping panels No. SP-1719, and an extension table No. RX-219. The same assembly can be made as a single unit or a longer multiple row, as all units are modular, and are available as 19″, 24″, and 30″ panel widths.



ANGULAR SECTION FRAMES may be obtained for assembling adjacent cabinet racks. Due to extensive listings needed, they have been omitted from this abbreviated catalog. If required, please indicate the **catalog no.** and the **adjacent racks.** They are available in **30° and 45°** units for all universal racks listed on Par-Metal Pages 5 thru 7.

The above illustrations show some of the many possible combinations of units listed. Let us provide engineering assistance on any assembly suitable to your project.



This desirable low console assembly consists of these standard Par-Metal units: three No. PL-4824-A racks, a pair of RL-424 detachable side panels, three No. SP-1719 sloping panels, and one RX-319 extension table. Any panels listed on Par-Metal Pages 20 and 21 may be substituted for the ventilated panels shown at the bottom.

DETAILS OF CONSTRUCTION AND ASSEMBLY

RACK CONSTRUCTION:

The frame shown is used on series "FL", "FR", "PL", and "PR" racks. The top and bottom is made from 7/64" steel. The four uprights are also 7/64" steel, and have multiple-formed angle bends to insure rigidity. Series "PX" and "FX" racks are similar, except that the solid side walls are made from 1/16" steel. The entire assembly is securely welded to form an integral unit.

DOORS:

For sake of clarity, doors are not shown on the frame drawing. They are stamped from one piece of 1/16" steel, and "dutch formed" on all sides providing smooth double-thick edges. Adequate ventilation is obtained from full ventilating (venetian-type) louvers. Short doors for fan or blower installations are available.

DOOR HARDWARE:

Door hinges are slip type to permit easy removal. Die cast, chrome plated handles are equipped with cam latches for door closures. Lock type handles are supplied on racks with both front and rear doors. Non-locking handles are used on racks with rear doors only; locking type handles are optional.

- **SIDE MOUNTING BRACKETS:**

These may be used separately or with shelves as shown. Slotted holes on the brackets provide any vertical adjustment required.

- **PANEL MOUNTING ANGLES:**

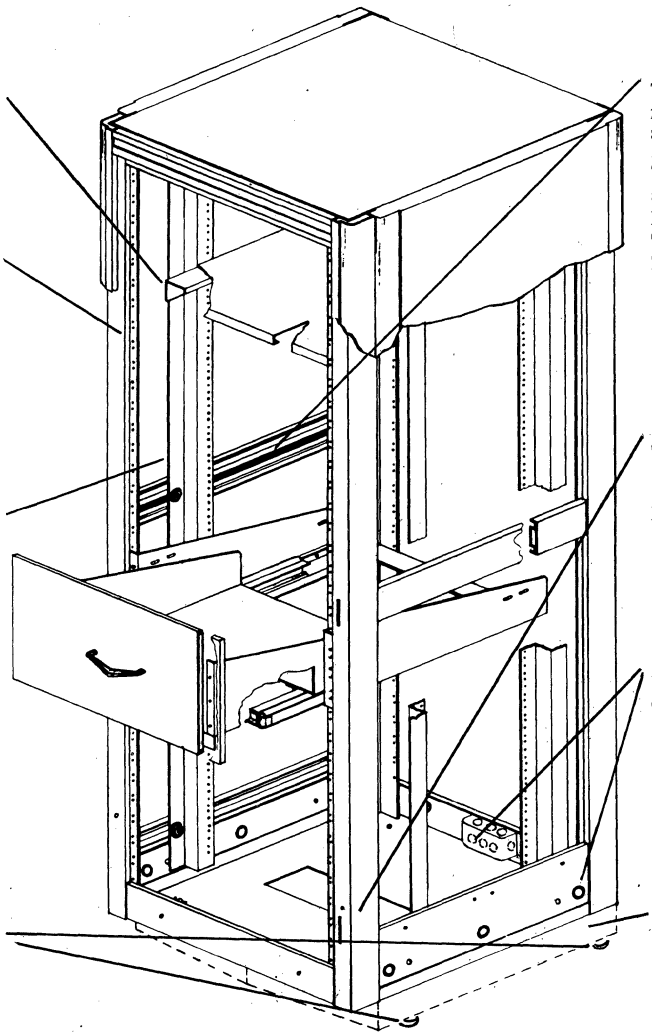
They are made from 1½" x 1½" x 3/16" thick structural steel. All holes are die punched to provide accurate spacings with close tolerances; holes are tapped 12/24 thread on 1¼"-½" alternate spacings for standard rack panels. Additional angles may be purchased for mounting terminal blocks or other devices.

- **VERTICAL SIDE SUPPORTS:**

These supports are fastened to the same bolt retainer rails used for securing the panel mounting angles. Holes are 5/8"—5/8"—½" alternate centers, tapped 10/32 thread, provide maximum adjustment for side mounting brackets and equipment shelves. They may also be used for attaching slides or other custom made brackets. The supports are made from 7/64" thick steel, locked in place with 3/8" diameter screws, lock washers and hexagon nuts, to afford maximum support.

- **FLOOR LEVELERS:**

Four are supplied with all universal type racks.



- **BOLT RETAINER RAILS:**

To these are bolted the panel mounting angles and vertical side supports, which may be located at any position from front to back. These rails are made from 7/64" steel, and are rigidly welded in place. Angles and supports are securely fastened to rails with 3/8" diam. steel bolts, lock washers, and hexagon nuts.

- **ACCESS OPENING:**

Opening in bottom is 4" x 14" on 19" panel racks; 4" x 19" on 24" panel racks; 4" x 25" on 30" wide panel racks.

- **OUTLETS:**

"Knockout holes" are available on cabinet side for connecting cables; a duplex outlet, outlet box and plate are mounted on cabinet under rear door.

- **RECESSED SUB-BASES:**

They are available for all universal type racks as an optional accessory.

FRONT VERTICAL CORNER AND JOINING TRIMS:

In previous catalogs, wide corner trims were listed as standard on our universal racks. They overlapped the side edges of the rack panels to conceal the panel mounting screws. This type of trim was not suitable where sliding shelves, sliding drawers, extension desk tables, sloping panels and similar equipment were mounted on the rack.

Since such shelves, drawers, etc. are now being used on the majority of racks purchased from us, **we will now supply as standard "narrow type" corner trims** which do not interfere with the use of these accessories. Narrow type trims are shown on all racks illustrated on the opposite page.

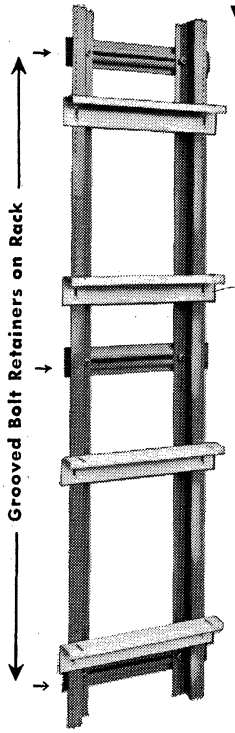
PAR-METAL CABINET RACK ACCESSORIES

VERTICAL SIDE SUPPORTS



These vertical side supports are supplied in sets of four uprights to fit all universal racks listed on PAR-METAL Pages 5 thru 7. (Cut shows side mounting brackets in place which are sold separately—see listing below).

Supports are fastened to grooved bolt retainers which hold panel mounting angles in place, and are adjustably mounted from front to back of rack. Holes are **drilled** and **tapped vertically** to provide adequate vertical adjustment for mounting brackets, shelves, and various sliding devices.

When installed in racks for 19" wide panels, the clearance between supports (from right to left) is 17¾". On 24" wide panel racks, the clearance is 22¾"; on 30" wide panel racks, the clearance is 28¾". Supports are 2⅝" wide and 1½" deep.

Supports are made from 7/64" thick steel, finished in aluminum enamel. Each set is supplied with ⅜" dia. bolts, lock washers, and nuts for rack mounting.

RACK TYPE EXTENSION TABLES

These tables are mounted to the front of cabinet racks as illustrated on PAR-METAL Page 3. They are made from ¾" plywood, to which is bonded 1/16" thick formica of a dark grey pattern on both top and apron, which is 2½" high.

The apron is substantially reinforced for fastening to horizontal channel type supports. The channels are made from 7/64" thick steel, and are bolted to vertical side supports which are securely mounted on the inside wall of the rack. The tables may be adjusted at any height from the floor. This assembly provides a very rigid structure, with a smooth writing space across the entire top. There are no metal parts exposed, and no painted metal surfaces to deteriorate with constant usage.

The tables may be installed on any of the cabinet racks (without front door) listed on PAR-METAL Pages 5 thru 7. They are also available for modular rows of four or more racks.

ALL OF THESE TABLE ASSEMBLIES REQUIRE ONLY 3½" OF PANEL SPACE (height).

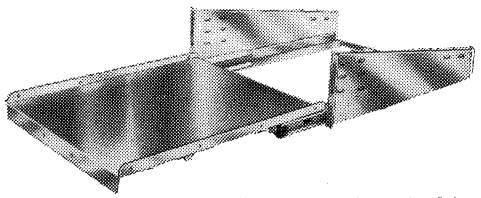
PAR-METAL RACK TYPE SLIDE ASSEMBLIES

GENERAL DESCRIPTION

These slide assemblies will save considerable lay-out and assembly time as an alternate method of attaching individual slides directly to the interior of a rack. All models are screw mounted to the front panel mounting angles of relay racks, the same as regular panels. Additional holes are provided in the side brackets of the shelf assembly for mounting to our standard vertical side supports. Either method will provide a rigid support; both may be used together where desirable.

The basic slide assemblies for use in 19″ wide panel **racks will accommodate chassis up to 17″ wide.** All of the "usable space" noted below may be fully extended from the front of the rack; load capacities are based on the shelf in this position. All units are ruggedly constructed to withstand constant usage. The frames and brackets are made from 7⁄64″ thick steel. All parts are securely welded or fastened with stainless steel rivets.



BASIC SLIDE ASSEMBLIES

The basic slide assembly illustrated is sold as a complete unit, ready for installation in all 18″ or 24″ deep racks. Panels may be attached to chassis by using standard *brackets or any other convenient method. The panel and chassis assembly is then bolted directly to the slide pan. Formed panels with a minimum height of 7″ are recommended. Four models are listed to fit racks using panels either 19″ or 24″ wide.

The BS-1940 and BS-2419 are identical in size, but have different load capacities. All load capacities are conservatively rated to carry the full load with the sliding shelf completely extended. All parts are zinc plated.

STORAGE DRAWER ASSEMBLIES

These drawers are suitable for stationery, instruments, parts, etc. The drawers are mounted on the basic slide assemblies described above. They are available either 7″ or 10½″ high to match standard rack panels of the same height. Three models are listed for racks with 19″ wide panels, and one for 24″ wide panel racks.

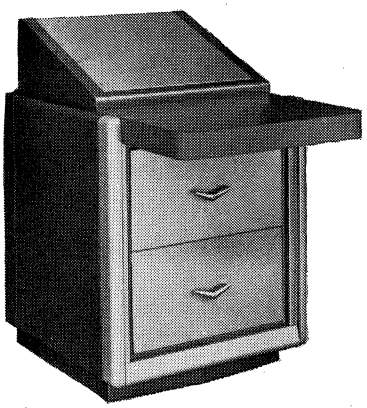
PAR-METAL DE LUXE CONSOLE ASSEMBLIES

General Description

The combination of a control cabinet mounted on table, desk or similar support usually called a console has been in general use in the electronics industry many years.

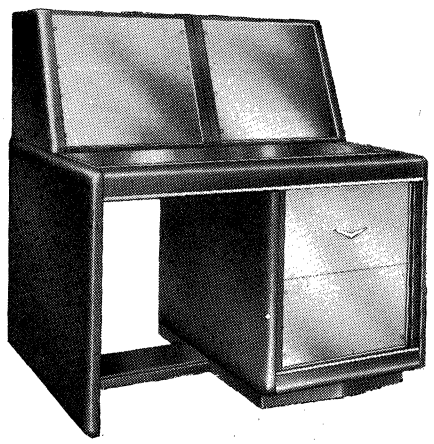
While it is obvious that no particular fixed design can serve every requirement, **we have devised a group of standard units,** the combination of which is readily adaptable for specialized applications in control equipment, testing facilities, sound distribution systems and industrial purposes. Our previous models have been functionally redesigned and smartly styled to keep pace with current trends. New modular units have been added, all of which may be grouped or expanded to meet your specific needs.



SINGLE UNIT ASSEMBLY

The **versatile pedestal racks** are the keystone to the entire assembly. They are constructed for heavy duty use, having all the essential features of our type "PL" cabinet racks listed on PAR-METAL Page 5. This would include panel mounting angles which are adjustable from front to back, and provision for installing chassis mounting brackets and shelves where needed. They offer an efficient utilization of space, complete accessibility for servicing, and are **solidly built** to withstand heavy strains **whether in a laboratory or a moving vehicle.**

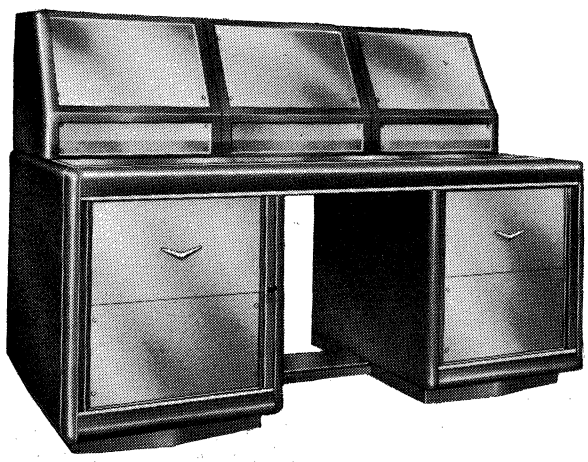
Two models of pedestal frames are available, which are identical except for the depth (front to back). The PD-224 frame (24¼" deep) unit may be used with or without an extension desk table as illustrated below.



DOUBLE UNIT ASSEMBLY

There are four models of desk panel cabinets suitable for mounting on the pedestal frame top. (PAR-METAL Page 15) to make a complete console. Single or multiple unit consoles may be combined with our Series "PL" racks (see PAR-METAL Page 11).

The PD-234 frame (34¼" deep) forms a complete desk structure without the use of extension shelves. When one of our desk panel cabinets is mounted on top, additional space is available in front as a desk writing surface. The 34¼" depth provides additional interior space, and may also be assembled with our Series "PL" cabinet racks to perform the same functions as our PD-224 (24¼" deep) pedestal frame. Unit assemblies are not limited to triple units, and may be extended to modular groups of four or more. If you have a specific problem, do not hesitate to consult us. Personalized and interested engineering assistance is always available.



TRIPLE UNIT ASSEMBLY

The **new side panels** are readily detachable from the outside. No drilling or fitting is necessary for the assembly of pedestals, cabinets, brackets, shelves or drawers. All panel mounting holes are tapped for screws—no metal screws or clips are used.

Our standard finish is a combination of light and dark grey hammertone enamel. Your desk requirements are easily selected from the group charts on the next page. For the turret, you may choose from four types of control cabinets listed on PAR-METAL Page 15. Other standard finishes, including black or blue grey wrinkle enamel, light grey or medium grey enamel or primer coat only, are optional without additional cost.

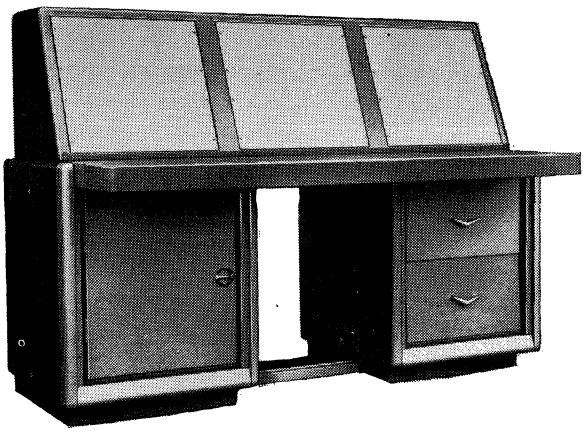
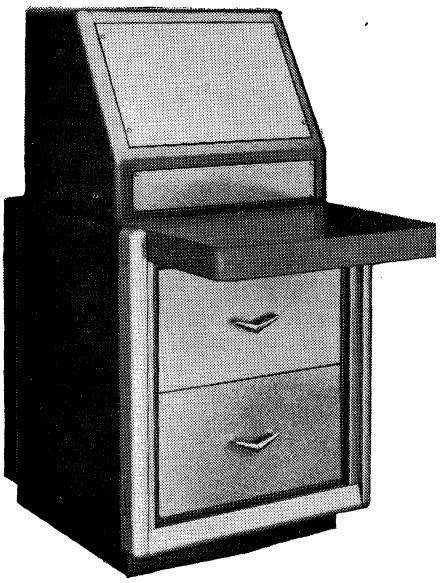
PAR-METAL DE LUXE CONSOLE ASSEMBLIES

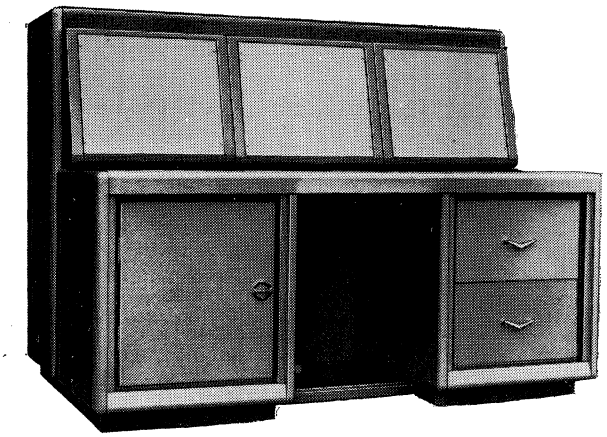


Below are illustrated additional assemblies of console units, as well as console units combined with our Series "PL" universal cabinet racks (listed on Par-Metal Page 5).



The above unit consists of: two No. PD-224 pedestal frames, two No. EP-24 exterior side panels, two No. KP-24 interior side panels, one No. HS-103 high slope cabinet, one No. CD-24 center desk section and one CT-319 extension table, (door drawers, or rack panels for front and back are optional).

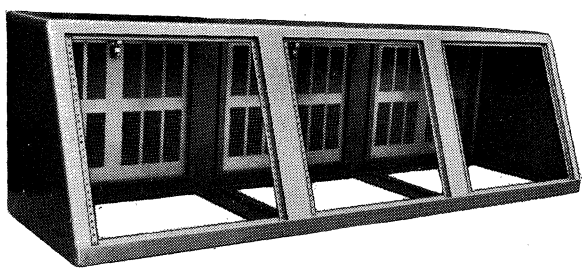
The above illustrates a single unit assembly similar to the triple unit shown on the left. Any of the four types of Desk Cabinets shown on Par-Metal Page 15 may be used in this combination. These console assemblies are available with heavy-duty 3" wheel casters in place of a recessed sub-base, if desired.



A versatile assembly suitable for many projects is shown above. It consists of the following units: three No. PL-4818 universal racks (Par-Metal Page 5), one pair No. RL-418 detachable side panels (Par-Metal Page 5), two No. PD-224 pedestal frames, two No. EP-24 exterior side panels, two No. KP-24 interior side panels, one No. CD-24 center section, three No. SP-1719 sloping panels, (Door, drawers, and rack panels for front and back are optional).

The console combination at the front of the cabinet racks (pedestal frames, sloping panels, table top, etc.) may be assembled with our other series "PL" cabinet racks listed on Par-Metal Page 5.

A single unit assembly consisting of the following: one No. PL-4818 cabinet rack, one No. LS-101 low slope panel cabinet, one No. PD-224 pedestal frame, one No. CT-119 extension desk table. Front panels or hinged door are optional. Many other groupings of consoles and cabinet racks may be made. Let us know your individual requirements for any project. Our Engineering Dept. will give you personalized and interested assistance.



This is an interior view of our No. HS-103 high slope panel cabinet. Note the rigid bracing and well ventilated individual rear doors. This construction is typical of all panel control cabinets listed on Par-Metal Page 15.

PAR-METAL COMPONENT GROUP CHECK LISTS

The group charts below list all necessary and alternate components for single, double, and triple unit assemblies, and also provides a check list to determine your exact requirements. There are four models of desk panel cabinets specially designed to fit on the top of the assemblies detailed below. For simplicity, they have been omitted; for a complete description see Par-Metal Page 15.

All of the 19" wide panels listed on Par-Metal Pages 20 and 21 may be mounted on these assemblies. Refer to Par-Metal Page 9 for sliding drawers shown in the illustrations on the opposite page. Other component parts suitable for use with these assemblies are shown on Par-Metal Page 14.

RACK PEDESTAL FRAMES

The rack pedestal is the principal component used in all single and multiple unit assemblies. It combines the essential features of our **type "PL" racks** listed on Par-Metal Page 5 and is attractively styled for any environment.

The bottom and step base are formed from 7/64" steel; all other parts are made from 1/16" steel. They are substantially welded together to insure the extra strength and stability needed for heavy duty installation, wherever located. They are capable of carrying heavy transformers, large power supplies, motors, compressors, and similar apparatus.

Panel space at front and back is 21" x 19". Panel mounting angles (or "strips") may be located at any position from front to back, and have tapped holes for mounting standard rack panels, sliding shelves, phono drawers, or storage drawers. Two pairs are supplied—one pair for front mounting and another pair for rear mounting. Additional tapped holes are available at the sides for mounting chassis supports and shelves.

The various units required to make up complete assemblies are listed on Par-Metal Pages 14 and 15. The component check lists on Par-Metal Page 12 enables you to easily select the parts required.

Pedestal frames may be obtained as standard units with heavy duty casters at a nominal additional cost. See listing and description on Par-Metal Page 19. **FINISHES:** Standard finish is a combination of light and dark grey hammertone enamel. Other optional finishes are listed on Par-Metal Page 10. We will be happy to answer any questions regarding dimensional information, construction details, etc. Write for assistance.

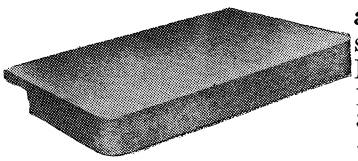
EXTENSION DESK TABLES



These extension tables are used in console assemblies illustrated on Par-Metal Pages 11 and 12. They are made from ¾" thick plywood, to which is bonded 1/16" thick grey formica.

The formica covers both the top and apron of the table which is 2½" deep. The apron is substantially reinforced for fastening to horizontal channel supports. The assembly provides a rugged structure with a smooth writing space across the entire top.

There are no metal parts exposed, and no metal surfaces to deteriorate with constant usage. As these tables are mounted above the front panels on the pedestal frame, the full front panel space of 21" may be used.

MULTI-RACK CABINET ASSEMBLIES

MULTI-RACK ASSEMBLIES: Both **Series "ER"** and **"FD"** racks may be set up in rows as shown in the sketch. The use of "venetian type" louvers provides a flat exterior surface on the sides of the racks; separate side plates with welded screw studs inserted at top and bottom of adjacent sides simplifies the assembly—no screwdrivers or wrenches are needed. Vertical joining trims overlap the joint between racks as shown on the sketch.

SERIES "FD" RACKS: This series with front and rear doors has adjustable panel mounting angles, which may be located at any distance from front to rear of rack. VERTICAL SIDE SUPPORTS listed on Par-Metal Page 8 will fit into these racks.

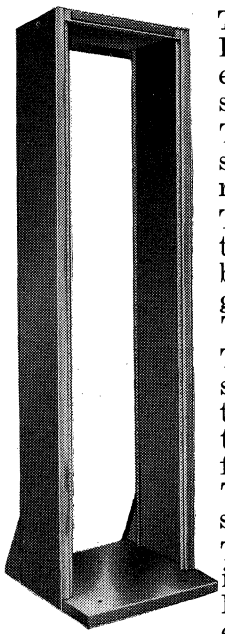
PAR-METAL CHANNEL RELAY RACKS

DELUXE TYPE RACKS for 19" and 24" wide panels



No. RR-197

These new DeLuxe Channel Type Relay Racks **are made from 7/64" thick steel,** and extend the utility and applicability of the standard channel relay rack.

The panel space is 77" x 19", to match a standard height used on enclosed cabinet racks.

The upright channels have been modified to an 8" overall depth, which when combined with a formed recess for the panels, greatly increases the rigidity of the rack. The edges of the panels are not exposed.

The rack is drilled and tapped for 10/32 screws at **both front and back,** permitting the optional use of either panels, or dish type chassis mounted to the racks at both front and back. The **full** panel space of 77" x 19" is available on the back, the same as the front.

The clear distance between panel mounting flanges (from front to back) is 6¾". It is practicable to use this 6" depth as an enclosure for dish type chassis listed on Par-Metal Page 23.

When such chassis are mounted at the back, the addition of standard or hinged type panels (see Par-Metal Page 21) will make a rack enclosure with a clear depth of 6¾".

The top cross-brace is provided with a grille for ventilation where needed. Two holes are located on each side for bolting racks together in rows, there are no projecting screw heads on the sides.

The top brace and the vertical channel members are securely welded together. The base and rear braces are shipped knocked down, with all necessary bolts for assembly. Panel mounting screws are also supplied.

FINISH: Standard finish is black ripple enamel. For grey ripple enamel, add 5%. For grey hammertone enamel, add 10%.

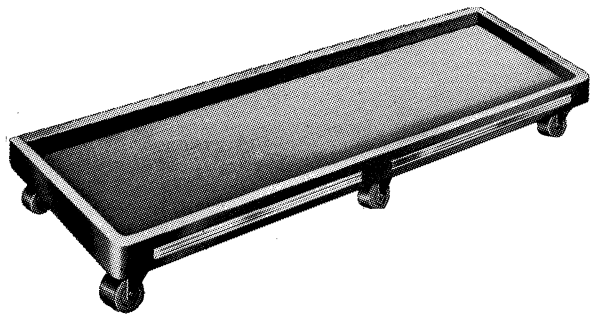
TABLE TYPE RACKS

THESE RACKS are intended for table mounting and are useful where a regular floor type heavy duty rack is not required.

The base is constructed of one piece, similar to a chassis. Mounting holes are accurately drilled on universal centers, tapped for 10/32 screws. They are finished in black ripple enamel and shipped "knocked down" with all necessary screws.

HEAVY DUTY DOUBLE WIDTH ROLLER TRUCKS



It is often necessary to mount groups of 2 of our enclosed racks on roller trucks. The truck illustrated above is used for that purpose. They are similar to our heavy duty trucks except that they have been reinforced with heavier steel because of their greater length.

They are supplied with 6 heavy-duty swivel type casters with 3" diameter wheels. These casters have a load capacity of 225 lbs. per wheel.

FINISH: BLUE GREY RIPPLE is standard; Black Ripple is optional without extra charge. Also available in Grey Hammertone or primer coat only at an additional cost of 10%.

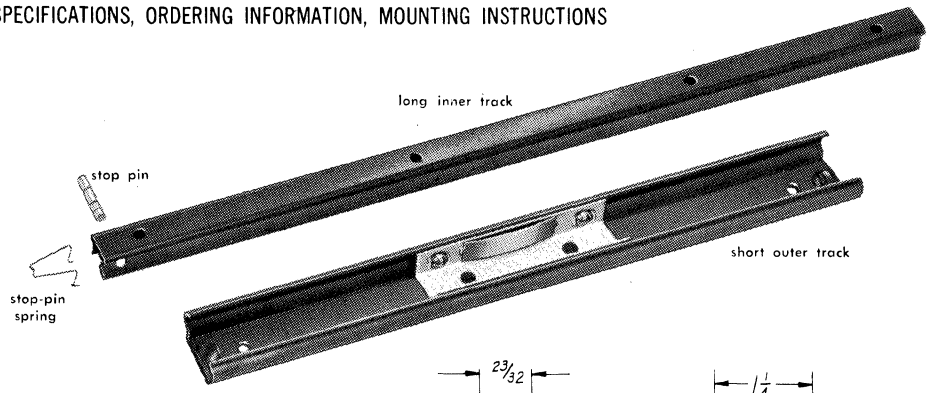
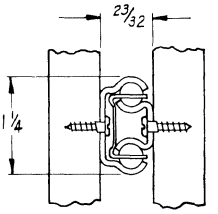
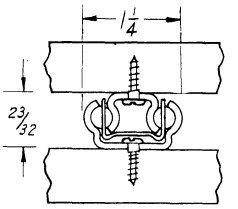
SPECIFICATIONS, ORDERING INFORMATION, MOUNTING INSTRUCTIONS



Part No. PS-13-9, exploded view.



Side mounting, end view.



Bottom mounting, end view.

mounting instructions

Tracks may be mounted on bottom or side. These instructions apply to either type of mounting.

1. Disassemble slide assemblies.
2. Fasten the short outer tracks to the cabinet with wood screws provided, keeping the track ends flush with the front of the cabinet. Tracks must be mounted parallel to each other to insure proper operation. (See Fig. A).
3. Fasten the long inner tracks to the chassis or moving unit, positioning them to conform in spacing to the outer tracks. Make certain that the stop pins are to the rear of the chassis. Also be sure that the tracks protrude sufficiently to the rear of the moving unit to enable removal and replacement of the stop pins. (See Fig. B).
4. Remove stop-pin springs, then remove stop pins from the long inner tracks which are mounted to the chassis.
5. Place the chassis or moving unit into the cabinet by lining up the inner and outer tracks and sliding into position.
6. Replace stop pins and springs.

EXPAND-A-RACK SERIES

DESCRIPTION:

A. When it is necessary to join two or more racks together, WYCO METAL PRODUCTS offers the "EXPAND-A-RACK" series.
B. Figure "A" shows two Expand-A-Racks joined together.
C. Figure "B" illustrates the method of expanding your present rack space. In place of purchasing an additional rack, a unit, consisting of the following items, would be bought: (a) the door; (b) the top; (c) the bottom; (d) an Expand-A-Rack joining unit. The right or left side of your existing relay cabinet rack is dis-assembled and replaced with an Expand-A-Rack joining unit. Following this step, the top and bottom are assembled. The cabinet side removed from the original rack is then fastened onto the second rack. Upon hanging the additional door, two complete racks are now joined together.
D. Wyco's Expand-A-Rack series may be purchased by one of two methods. One method consists of buying one complete rack (the "W" series) plus one Expand-A-Rack unit. If you already have one of our basic "W" series cabinets, then order an Expand-A-Rack unit.
E. Supports are electronically welded to the bottom to receive our casters (#RC-100).
F. There is an ample amount of compound knockouts in the Expand-A-Rack joining unit center partition. This allows cables and leads to be taken from one cabinet to the other.
G. Available in Grey or Black Wrinkle and Silver Grey Hammertone.

SLOPING PANEL SUPPORT

In answer to many requests from engineers within the industry, WYCO METAL PRODUCTS presents the all-new SLOPING PANEL SUPPORT, The SLOPING PANEL SUPPORT allows for mounting of the standard 19" panel in sloping position. This enables the engineer or equipment user to more easily view the rack mounted instrument panel. From this illustration, it is easy to see that the SLOPING PANEL SUPPORT offers a variety of positions in which a standard 19" panel may be supported in sloping position. The SLOPING PANEL SUPPORT is fabricated of heavy gauge steel and is finished in Black and Grey Wrinkle or Silver Grey Hammertone.

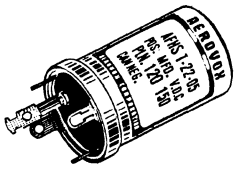
AEROVOX Capacitors

ELECTROLYTICS



TYPE AFH (85°C)

Twist-Prong Electrolytic Capacitors

SINGLES • DUALS • TRIPLES • QUADS

The outstanding line of twist-prong electrolytic capacitors with the very latest refinements . . . 85°C operation; improved moisture resistant sealing; special Types AFHS and PWHS for high ripple current circuits; high-purity aluminum foil construction throughout; either etched or composite-plate depending on electrical requirements. Types PWH and PWHS are special construction for printed wiring.

For use over a wide temperature range with minimum change in capacitance. Designed for filter audio bypass applications in radio-TV and amplifier equipment.

While AFH electrolytics enjoy a tremendous popularity as replacement capacitors for TV receivers, they are rapidly gaining acceptance in many industrial applications.

Capacity tolerances and surge voltage are as listed in EIA Specification No. RS-154.

Metal Can Tublular Electrolytic Capacitors TYPE PRS-AC (AC rated units) NP-PRS (non-polarized units)

Compact, electrolytic tubular capacitors furnished in aluminum cans with cardboard insulating sleeves. Designed for use in television and radio applications where space is at a premium.
Included in this listing are the AC rated units (PRS-AC) and non-polarized units (NP PRS) for replacement use in cross-over networks and color TV receivers. Also listed are Types PRSB—separate section, dual units for use in specialized applications.
Single section capacitors are furnished with bare tinned copper leads 3 inches long. Negative grounded to case. Multiple units are furnished with insulated, stranded copper leads 5 inches long. Negative is common and grounded to case. Multiple units have common cathode.
Sizes listed are diameters over cardboard insulating sleeve. For actual can size deduct 1/16" from diameter and 1/4" from length. Multiple units are supplied with mounting strap. If mounting strap is required on single units, specify on order.
Tolerance and surge voltage are in accordance with EIA Specification RS-154. **See page 346 for PRS Kit. AK-500.**

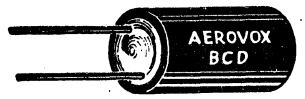
TYPE B C D UPRIGHT MOUNTING PLASTIC CASED ELECTROLYTICS



"Polycap" cased, epoxy end filled electrolytic capacitors. Upright mounting for replacement in printed wiring, transistorized personal radios and car radios.
Small size and type of mounting make these units ideal for use in any printed wiring circuit.
Plastic case and epoxy end seal offer good moisture barrier which protects against drying out or leakage of electrolyte.
High purity foil insures long life and low leakage.
Minimum 1" lead length assists in threading connections into printed wiring boards even in tightest spaces.
Positive lead is identified by a + (plus) mark on case.

TYPES HCB and NPB
High Capacity/Low Voltage Bakelite Cased Electrolytics

Type HCB units are polarized electrolytic capacitors designed for use in industrial applications such as battery eliminators, power supplies, electric fence controls and sound movie projectors. For non-polarized applications in welding and control equipment Type NPB units are available.

Both types feature heavy-duty, moisture resistant bakelite cases which eliminate the need for outer cardboard insulating tubes. Operating temperature range from —40°C to +85°C. Capacitance tolerance up to 150 VDCW —10% +100%, over 150 VDCW —10% +50%. High capacity etched plate construction assures long trouble-free operation. Units supplied with wrap around—footed brackets for vertical mtg.—horizontal mtg. available on Special Order.

PAPER CAPACITORS

BI-ELECTRIC® MYLAR* PAPER BYPASS TUBULARS

Radial Lead Mounting

Two famous dielectrics . . . quality kraft tissue and Mylar* film . . . are combined with Aerolene impregnant and exclusive "Polycap"® plastic case to bring you a truly superior bypass capacitor. The advanced construction techniques presented in "Bi-Electric" capacitors offer distinct advantages over other radial lead types. "Polycap"® case provides a solid uniform coating from end-to-end. Controlled end-fills provide sealed protection, and leads cannot crack end-fill or pull-out when leads are extended for axial mounting. Standard capacitance tolerance is ±10%. Operating temperature range is —30°C to +100°C.

TYPE V84C—V161

AEROFILM® (MYLAR*) CAPACITORS

V84C-V161 Aerofilm Tubular Capacitors are high quality units in Polycap® cases. These units have exceptionally high insulation resistance and low dielectric absorption and power factor. They are extremely stable having a relatively small capacitance change with temperature variations over a range of 0 to 85°C. Their excellent resistance to humidity and moisture are due to the use of Aerofilm (Aerovox's trade name for Mylar* polyester film), finest quality casing material, and an epoxy end fill which will not flow, soften or melt at any operating temperature. Standard tolerance is ±20% but also available in ±5% and ±10%.

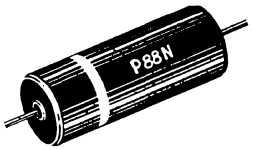
PAPER CAPACITORS (cont.)



TYPE P88N
†DURANITE
Duranite Blue Molded Tubular Capacitors

Toughest capacitors ever offered for radio-electronic equipment, DURANITE capacitors. Design, impregnant, processing, and casing insure glove-fitting contact and seal throughout. DURANITE provides a permanent, non-varying, rock-hard casing, does not dry out, does not develop cracks or fissures. Pig-tail leads firmly imbedded, won't pull out, won't work loose. Moisture-proof; operate from sub-zero to over 212°F. Exposure to temperatures of 250°F. will not impair life or performance, no deterioration on the shelf. A white band around one end of the capacitor identifies the outside foil.

AUTOPASS® Vertical Mounting Plastic-Cased Paper Capacitors

Aerovox Autopass capacitors were specifically designed and developed for use in conjunction with printed-wiring assemblies where it is highly desirable to mount capacitors at right angles to the mounting surface thereby conserving valuable space

Aerolene impregnated and assembled into a Polycap® case, Autopass capacitors are then sealed with a thermo-setting end-seal. The end-seal surface is below the outside edges of the plastic case, permitting the capacitor to be mounted flush against the mounting surface. The leads of these capacitors are stiff, and critical spacing is closely held to facilitate their use in mechanized assemblies. Outside foil is identified by wire lead nearest to edge of case or by a paint stripe on the case nearest the outside foil.

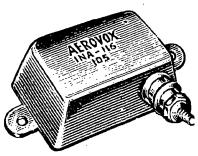
R-F NOISE CAPACITANCE SUPPRESSORS



BYPASS
INA-116, INA-117, INA-118

These radio-noise suppression capacitors have been especially designed for use in aircraft, vehicular and industrial electric and electronic fields.

Primary application of the INA-116, INA-117, and INA-118, is as r-f bypass capacitors from line to ground in low voltage DC supply lines. These units are rated at full 150 VDC over temperature range of —55°C. to +71°C. and 60 VDC from —55°C. to +95°C.

Types INA-218, INA-219, INA-220 and INA-221 are feed-thru capacitors in which the effective section inductance is minimized by the so-called "duct-type" design. Significant reductions can often be realized in size, weight and in some instances, overall cost by the use of feed-thru capacitors as compared to the conventional r-f suppression filter designs. The feed-thru capacitors listed below may be used with good characteristics to 1000 megacycles. Operating temperature range is —55°C. to +85°C.

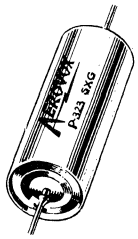
PAPER SUB-MINIATURES



Tubular, metal-cased capacitors, hermetically sealed with glass terminal end seals. Miniaturized, conventional, foil-paper construction. Especially developed to meet high temperature and minimum space requirements of present day electronic equipment. Designed for rugged long life operation, these units are preferred for many of those applications where reliability is a factor. Impregnated with Hyvol "S" a special, high-temperature-operating, stable, liquid impregnant for operation at elevated temperature. These units are capable of withstanding a voltage breakdown test of twice rated voltage between terminals or between terminals and case, for a one-minute period. Ambient temperature shall be plus 25°C. plus or minus 10°C. during this test. Power factor will be less than 1% when measured or referred to a frequency of 1000 cycles per second at 25°C. Type P323S and P323SX are rigidly processed to assure operation over the temperature range of —65°C. to +125°C. The capacitor sections on types P323S utilize an inserted tab construction to obtain minimum size. Type P323SX utilizes extended foil construction for those applications where operation is required at very low AC voltages.

For equivalent types rated —65°C. to +100°C. in the same case size as shown order on P123S, SX, etc. and request prices.

TYPES CP53, CP54, CP55

Oil impregnated and filled, drawn-metal cased capacitors, immersion proof and hermetically sealed. This unusually compact "bathtub" type capacitor is the most popular of the small units for severe operating conditions. Available with terminals on side (CP53), top (CP54), or bottom (CP55). The standard tolerance on single section units is ±10% (K), on multiple section units +20 —10% (V).

MODULIZED STANDARD CIRCUITS

Modules are comprised of uniformly standard, stacked steatite wafers combining the required resistive, capacity and inductive components to form a completely reliable, ruggedly compact electronic circuit.

Based on a study conducted by the National Bureau of Standards, the modules listed below were chosen as representative of circuits appearing in both military and commercial equipment. In all cases, similar functional circuits have been in use for at least 10 years without major improvement. Accessories, such as the twelve position bread board*, the individual module mounting socket† and mounting socket and banana plugs are available to facilitate the inter-connecting of standard circuit modules to form complete electronic sub-assemblies.

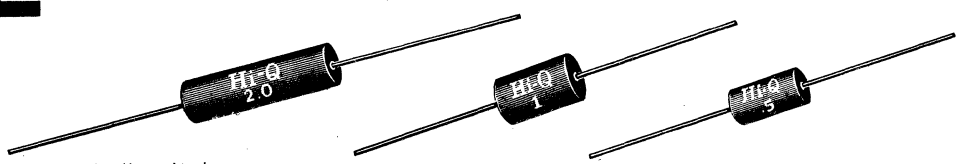
CEROL®

HIGH CAPACITY, HIGH RELIABILTY, ROLLED CERAMIC CAPACITORS



CEROL® capacitors are rolled ceramic capacitors in the high capacitance range of paper and plastic film dielectrics but in much smaller physical sizes and with superior electrical characteristics. Designed for general applications in bypass-coupling, filtering and blocking circuits. Excellent electrical characteristics for critical applications in decoupling and pulse circuits where low series resistance at high frequencies together with miniature sizes are required. Low series resistance makes them ideal for use in all computer circuits. Operating temperature range at VDC —55°C to 85°C and at 50 VDC —55°C to 125°C. Capacitance tolerance is ±20%. Will meet or surpass all the requirements of MIL-C-11015B.
